## DEDICATION

I WOULD LIKE TO DEDICATE THIS BOOK TO MY GRANDSON BRADEN, whom I call my “Joy Boy.” He is two and a half years old and full of love, joy, and energy.

I’m his papa, and a couple of months ago he came bursting into my exam room, yelling, “Papa, Papa!” He was so excited to see me, he ran over to me and gave me a big hug and then turned around to see three small children in the room with their mother and father. The little four-year-old boy was very ill, and he was my patient. Also, his ten-month-old baby brother and six-year-old sister were in the room.

Joy Boy first went over to the baby and just hugged and loved on that baby for about a minute. Next he went over to the four-year-old boy and hugged him for about a minute. You could tangibly feel the love and healing as Joy Boy hugged the ill child. Then with a toothy grin, he headed down to the sister and hugged her.

The parents were amazed at my little Joy Boy and the joy and love he showed. May all of us become as little children and share the love and joy of Christ with a sick and dying world.

I wish to also thank my wife, Mary, for her much needed love and support during the writing of this book.

## FOREWORD

**D**ON COLBERT CAME TO ORAL ROBERTS UNIVERSITY IN AUGUST 1977 as a sophomore. After completing his undergraduate work, he went on to complete medical school at ORU as well. During that time he walked through a life-threatening experience that heightened his awareness of the healing power of God. Because of the supernatural healing he experienced firsthand, Dr. Colbert became a man set on fire to bring God's health and wellness to as many people as humanly possible.

In 1963, ORU was founded on the principle of educating the “whole man”—body, mind, and spirit. I knew in my heart that God wanted us to be well in every area of life. God created each of us in perfect balance, and if any part of that balance is out of line, every part suffers. Each person can be treated that way in medicine as well. We are spirit, we live in a body, and we have a mind.

Dr. Colbert is carrying out God's commitment to the whole-man concept. His knowledge of the body being interconnected to the mind and spirit is quite unique. His application of that knowledge helps provide an atmosphere for the whole man to get well. Dr. Colbert believes that by treating all parts as being interrelated, it gives the person a better chance to be brought back into balance in all areas.

This book addresses the whole-man concept in a medical fashion that also includes the necessary awareness of the mind and spirit being treated with equal importance in the body. Because of his many personal experiences in finding health and wellness, God has uniquely gifted Dr. Colbert with an ability to see beyond the sickness and see into the person. He has chronicled that knowledge in this book in order to pass it on to those who desire to search out new answers to age-old problems.

It is my prayer that you too may experience the same wellness that Dr. Colbert and many of his patients have experienced. I thank God for His healing power that is so very important to us all, and I thank God for Dr. Colbert's desire to spread that healing knowledge of the whole man with books such as this one. May God richly bless you as you read.

—ORAL ROBERTS  
JANUARY 24, 1918–DECEMBER 15, 2009

## INTRODUCTION

**M**ORE THAN EVER BEFORE, WE ARE EXPOSED TO AND AWARE OF toxins in our food and environment that take a massive toll on our health. Shopping for organic foods has become commonplace, with farmer's markets and organic health food chains such as Whole Foods, Trader Joe's, and Sprouts springing up in most cities and suburbs around the country. Documentaries such as *Super Size Me*, *An Inconvenient Truth*, and *No Impact Man* draw our attention to the way ingested foods affect our bodies and mankind's actions affect our planet. We've learned that much of our air is toxic, much of our water is polluted, much of our food is depleted of nutrients and usually packed with toxic chemicals and hormones, and viruses and bacteria are rampant.

Add to that the concerning impact of natural disasters and man-made disasters such as the Gulf oil spill of 2010 or the Japanese earthquake and tsunami of 2011 that led to a nuclear reactor explosion, and there's no question the toxicity of our planet is reaching critical mass.

Is there any way to escape it?

Yes, there is. And this book is designed to teach you how.

The original version of this book was published in 2001. At that time, I wrote that we lived in a dangerously toxic state, and sadly, most of us weren't even aware of it. Even at that time, deaths related to our toxic diet and lifestyle accounted for most deaths in America. Heart disease, cancer, strokes, diabetes, obesity, and other diseases caused more than 85 percent of all deaths,<sup>1</sup> and many diseases at that time were also caused by a buildup of toxins that create excessive free radicals and oxidative stress, damaging tissues and organs and setting the stage for disease and distressing symptoms including fatigue, memory loss, premature aging, skin disorders, arthritis, hormone imbalances, chronic fatigue, anxiety, emotional disorders, cancers, heart disease, and much, much more.

Sadly, that pattern hasn't changed. It has, if anything, gotten worse. Our planet continues to get sicker and sicker with each passing year, and with it the people and animals living upon it. Natural and man-made disasters only fuel the eruption of greater and greater toxicity around us.

But the encouraging news is twofold. First, our awareness is much greater than it was ten years ago, when I published the first version of

*Toxic Relief.* You are likely holding this book in your hands because you're well aware of the toxins at work in our food, our environment, and our bodies and want a game plan and hope of a better future, and for that I applaud you. In this book you will find exactly what you're looking for.

And that's where the second piece of encouraging news comes in. After many years as a medical practitioner and family physician devoted to improving health and educating patients, I'm convinced there's a better way to care for our bodies and find hope for our future. Yes, we are toxic, and many of us suffer from long lists of chronic illnesses as a result. But we are not hopeless. There is toxic relief!

That's why I've written this updated and revised version of *Toxic Relief*. Much of the pain, suffering, and consequential early death caused by our toxic lifestyle and environment can be avoided and even reversed, and this book offers you a practical guide full of encouragement and genuine hope. Not only can you prevent chronic illness and poor health due to toxicity, but also if you are currently suffering from chronic disease and illness, you may even be able to turn your situation completely around. In this book I have provided you with a medically sound and easy-to-follow program to give you toxic relief.

As you will learn in this book, cleansing your body right down to the cellular level will renew your vitality, restore your energy, reclaim your health, shed toxic fat, lengthen your life, and give you a healthy glow you haven't had in years.

Not only that, but this program of fasting and detoxification is also for the total person. Fasting as a spiritual discipline is as old as Moses. This program is designed to cleanse and restore you to health—body, mind, and spirit!

So, if you've been suffering from toxic overload of the body, mind, and spirit, it's time to get ready to experience blessed toxic relief.

—DON COLBERT, MD

SECTION I  
YOU NEED TOXIC RELIEF

## Chapter 1

# OUR TOXIC EARTH

ON APRIL 20, 2010, AN OIL RIG CALLED DEEPWATER HORIZON exploded in the Gulf of Mexico's waters and took nearly three months to contain. Each day that the oil spill remained active, anywhere from 53,000 to 62,000 barrels of oil spilled into the ocean's waters, resulting in a total of 4.9 million barrels (or 205.8 million gallons) of oil spilled by the time the well was capped.<sup>1</sup> Pictures of oil-drenched fish, birds, and pelicans circulated the Internet during those three unpredictable months, testifying to the sickening pollutants at work in the gulf waters. By late June, more than four hundred oil-exposure complaints and one hundred oil-spill-related illnesses had been reported to poison-control centers.<sup>2</sup>

Less than one year later, on March 11, 2011, a 9.0-magnitude earthquake and its resulting tsunami in Japan led to an explosion in the Fukushima Daiichi nuclear plant, causing a fuel meltdown in three of its four reactors and leading to a radiation leak into the ocean and surrounding land. More than 170,000 residents within a twelve-mile radius were evacuated from their homes, and at least 200 people were exposed to radiation within the first few days of the explosion.<sup>3</sup> Later, we learned that two workers at the nuclear plant were exposed to two times the government limit of radiation—their exposure equaling more than the radiation effect of having one thousand abdominal X-rays.<sup>4</sup> As of the printing of this book, the evacuation zone areas around the Daiichi plant have been declared uninhabitable and are likely to remain so for years, possibly decades.<sup>5</sup>

Take a mental trip back in time with me and consider this: in less than ten years' time we've witnessed disasters such as Hurricane Katrina, tsunamis in Thailand and Japan, flooding in Tennessee and Alabama, earthquakes in Haiti and Japan, plus a major oil spill and nuclear plant explosion. What is the health impact on humans when such disasters strike? Ought we be worried about their short- and long-term effects? What do we need to know to help our bodies thrive despite these occurrences? These are the kind of new questions we face in a time when natural and man-made disasters are prevalent on our planet.

And yet, there's even more to be considered. Beyond the catastrophic natural and man-made disasters that have crashed into our lives this last decade, the ongoing sad reality is that we live in a toxic world. Plain and simple, our toxic planet is taking a heavy toll upon our bodies every day, whether we know it or not.

Think about these facts. Due to our technological advances since the Industrial Revolution, we have continued to pour dangerous chemicals and pollutants into our streams, soil, and air. At this moment you probably have some amount of lead in your body, usually stored in your bones—all of us do.<sup>6</sup> Most of us have small amounts of DDT (or its metabolite DDE, which is what it changes into during metabolism) in our fatty tissues.

Existing environmental lead levels are at least five hundred times greater than prehistoric levels.<sup>7</sup> Lead, one of the most commonly used metals (other than iron), is used for manufacturing batteries, chemicals, and other metal products. Lead has actually contaminated our entire planet. Lead has even been found in some of the most remote areas on the planet such as the Arctic Ice Cap and in the New Guinea aborigines that live far away from any sources of lead exposure. The contamination is most likely due to airborne pollution. It has actually been established that we have between five hundred to seven hundred times more lead in our bones than our ancestors did.<sup>8</sup>

Unfortunately, much of our water, food, and air is polluted by chemicals that are nonbiodegradable, or that take many years to break down. Not only is it difficult for the earth to break down these chemicals, but also it is difficult for your body to detoxify or eliminate them efficiently. Sometimes we lack the detoxifying enzymes required to detoxify them. Thus, these chemicals become stored in our bodies, especially in fatty tissues, and are even stored in the brain, which is made of about 60 percent lipids, which are fatlike substances.

## **Sick and Toxic**

If our earth is sick and toxic, then there is a very good chance that most of us will be sick and toxic. Unfortunately, we are usually unable to smell, taste, see or sense most of the toxic chemicals to which we are exposed on a daily basis. As a result, it becomes increasingly difficult to avoid exposure.

Every day we are exposed to thousands of toxins, and they are slowly accumulating in our bodies. If we do not get toxic relief, these poisons may eventually kill us through sickness and disease.

But we are not hopeless. We do not need to sit passively by while our immune systems break down under the heavy burden. Toxic relief is available. You can cleanse your body from years of accumulated toxins and their effects by learning to support your body's own elaborate system of detoxification.

Let's take a closer look at the toxins with which our bodies must deal in an ongoing way.

## [The Dish on Oil Spills](#)

The sad fact is, we don't actually yet know how much damage a major oil spill can wreak on the human body. Although we have witnessed more than thirty major oil spills in the last fifty years, very little research has been conducted on the effect these spills have on the human body.<sup>9</sup> What's more, the research that was conducted on a fraction of those thirty spills often used small samples without group comparisons and never examined any long-term consequences.<sup>10</sup>

Those close to the spills, such as cleanup workers, often report symptoms such as stinging eyes, rashes, nausea, dizziness, headaches, coughs, and other respiratory concerns after working in spill regions.<sup>11</sup> But these are all conditions that researchers feel confident can be reversed. As further confirmation that spill effects on humans are likely reversible, one study conducted in the aftermath of the shipwreck of an oil tanker called *Prestige* off the coast of Galicia in 2002 evidenced a marked increase of DNA damage in individuals who had been exposed to the spill, but the damage was shown to have been reversed just months after the initial tests were run.<sup>12</sup> For the moment, then, researchers seem optimistic that damage to exposed humans in the wake of an oil spill is reversible and nonpermanent.

Still, the concern about human health as a result of an oil spill is far-ranging. Those who work to clean up the damage wonder how breathing in the oil fumes and handling the tarballs will affect the quality of their ongoing health. Parents wonder how such fumes and chemicals will affect the health of their small children. And everyone seems to wonder when the time will be safe to consume seafood again!<sup>13</sup>

When an oil spill happens, a few toxic chemicals are immediately released that can affect the human body. The first of these are benzene and toluene. Benzene is associated with leukemia. Both of these are volatile organic compounds (VOCs), which evaporate quickly once the oil hits the surface of the water but can cause respiratory distress when coming in contact with humans.<sup>14</sup> Other chemical substances, called polyaromatic hydrocarbons (PAHs), can linger in the water much longer and provide more cause for concern.<sup>15</sup> When it comes to an oil spill's effect on the food chain, we face potentially long-term risks. For instance, we know that vertebrate species in the water can generally filter out PAHs without much difficulty, but invertebrate species (such as oysters and shrimp) have a much harder time of it, and the PAH chemicals can accumulate in those organisms for years.<sup>16</sup> In a place like Louisiana, where the Deepwater Horizon spill happened, knowledge of this fact can be especially helpful, since oysters and shrimp make up much of the fishing industry there.

Due to the magnitude of the Deepwater Horizon spill of 2010 and the resulting discovery that not much research had historically been conducted on any oil spill's effect on human health, the Department of Health and Human Services earmarked \$10 million for tracking oil-spill-related illnesses in the aftermath of the 2010 spill, and more than 14,000 employees of the BP oil company responsible for the spill volunteered to be part of a tracking system.<sup>17</sup> Scientists have been tracking the effects of the spill since it happened, but conclusions will take some time to be seen.

For further protocols on how to protect yourself from an oil spill's effects, see Appendix A.

## **What Happens in Nuclear Explosions?**

When the news broke that a 9.0-magnitude earthquake had hit Japan, you may have watched in near disbelief, as I did, the footage of the major tsunami wave crashing its way onto Japan's shores. And as devastating and unbelievable as that catastrophe was, it seems no one was prepared for what happened next: the announcement of the explosions at the Fukushima nuclear plant. Suddenly the world collectively wondered, *Will this be Chernobyl again?*

With a nuclear meltdown like the one that happened in Japan in March 2011, two major concerns worry health officials most. The first is the

release of radioactive iodine that causes thyroid cancer. The second is the release of cesium, which is absorbed throughout the body and stays in the organs, tissue, and atmosphere much longer than the radioactive iodine.[18](#) The Chernobyl explosion in Ukraine in 1986 brought with it the second threat of the release of cesium, and it is actually through that explosion that we learned of cesium's long-term damaging effects. Prior to the Chernobyl explosion, it was believed the cesium would be diluted or washed out with rain. But rather than being washed out, it accumulated in vegetation. Once animals fed on that vegetation, they too became contaminated, which affected our meat and milk as a result.[19](#)

Exposure to radioactive iodine, while harmful, is clearly the less threatening of the two possibilities. Not only does it have a half-life of eight days, meaning that every eight days it breaks down harmlessly and ultimately becomes a nonissue within a couple months, but it also can be countered with potassium iodide tablets taken within the first twentyfour hours.[20](#) Conversely, cesium can remain in the soil for up to thirty years and can have immensely damaging effects on the body, such as burns, acute radiation sickness, and even death.[21](#)

In the incident of the Fukushima explosion, we learned about three months after the explosion that the release of radiation was double that which was originally predicted—770,000 terabecquerels, as opposed to 370,000 terabecquerels.[22](#) We also learned that children over thirty-two miles from the explosion site suffered fatigue, diarrhea, and nosebleeds—the three most common of eight radiation signs—testifying to the greater susceptibility of children to the effects of radiation in the environment.[23](#) Additionally, another radioactive chemical, strontium 90, was detected in soil at eleven locations just sixty-two kilometers from the nuclear power plant.[24](#) Radioactive strontium 90 accumulates in bones and is believed to cause bone cancer and leukemia.[25](#)

Clearly, nuclear explosions pose a serious concern for health, but thankfully the incidences of such explosions are rare. Refer to Appendix A for further considerations and protocols to follow in the event of being exposed to radiation.

## **[Awash in Chemical Chaos](#)**

Our bodies are battling an onslaught of toxic chemicals of staggering proportions. In 2009, nearly one billion pounds of toxic chemicals were released into our air, according to the Environmental Protection Agency's Toxic Release Inventory of 2009.[26](#) Think about these statistics:

- About seventy-seven thousand chemicals are produced in North America.
- Over three thousand chemicals have been added to our food supply.
- More than ten thousand solvents, emulsifiers, and preservatives are used in food processing.
- About one thousand new chemicals are introduced each year.[27](#)

What's more, a study in the *British Medical Journal* in 2004 estimated 75 percent of cancers are caused by environmental and lifestyle factors. Another report by the Columbia University School of Public Health estimated diet and toxins in the environment cause 95 percent of cancer.[28](#) Estimates also show Americans holding between four hundred and eight hundred chemicals in their bodies at any given time, most of them stored in fat cells.[29](#)

The air you breathe may be polluted by exhaust from our cars, buses, trains, and planes, and by industrial air pollution, air pollution from waste disposal, and more. Carbon monoxide makes up about half of our air pollutants. Most of this comes from fuel. This dangerous gas has been directly linked to heart disease.[30](#)

Heavy metals and other pollutants are emitted from smelting plants, oil refineries, and incinerators. Ozone is the main chemical offender in smog. It irritates the eyes as well as the respiratory tract. The smog and air pollution in Los Angeles County is so high at times in the summer months that residents are warned against exercising outside. The air can become so thick with chemicals that at times it can be difficult to see.

You can live for weeks without food and days without water, but only minutes without air. If the air you are inhaling contains smog, chemicals, carbon monoxide, heavy metals, and other pollutants, then it passes into your nose, into your lungs, and on through your bloodstream. With each

breath, toxic chemicals are actually being pumped by the heart to every cell in your body via the bloodstream.

Industrial plants, incinerators, and hazardous waste sites release volatile organic chemicals. These may include benzene, formaldehyde, vinyl chloride, toluene, carbon tetrachloride, and other volatile organic chemicals. Many of these can cause cancer.

In addition, the American Lung Association recently reported that coal-fired plants are estimated to kill thirteen thousand people per year, with more than 386,000 tons of air pollutants emitted from more than four hundred plants in the United States per year. These coal-fired plants are also the culprits for emitting airborne mercury, which often enters the human food chain through fish and wildlife. High levels of mercury can lead to brain damage, birth defects, and damage to the nervous system, and the air pollutants from coal plants are believed to cause heart attacks, strokes, lung cancer, birth defects, and premature death.<sup>31</sup> (See Appendix A.)

## **Indoor Pollution**

If you think that pollution is only found out of doors, you are wrong. Indoor pollution is often even more dangerous to your health than what you inhale outside. Let's look.

Most people spend about 90 percent of their time inside homes, office buildings, restaurants, factories, and school buildings. In these places, indoor toxins, chemicals, and bacteria are trapped and recirculated throughout the heating and air conditioning systems of these structures and may create a much greater health risk.

Today's buildings are much more airtight and well insulated than they were years ago, making them vaults for germs, bacteria, and chemical toxins. If you travel with your job or business, you could be even worse off. Sealed-tight airplanes can seal in germs, bacteria, and pollutants collected from people around the globe.

## **Sick Building Syndrome**

Think you're safer because your office building is new? I hate to have to be the one to inform you, but you couldn't be more wrong. Volatile

organic compounds such as benzene, styrene, carbon tetrachloride, and other chemicals are as much as one hundred times greater in new buildings compared to the levels found outdoors.

New buildings are the worst. Building materials emit gasses into the air through a process known as “out-gassing.” New carpets release formaldehyde. Paints release solvents such as toluene and formaldehyde, and furniture made from pressed wood releases formaldehyde into the air as well. Additionally, out-gassing may also occur from fabrics, couches, curtains, carpet padding, glues, and more.

The many chemicals released through out-gassing from carpets, paints, and glues can become so strong that those who work in these buildings can get really ill. When a building’s indoor pollution level rises this high, you are more likely to become ill with *sick building syndrome*. *Sick building syndrome* is defined as “the occurrence of excessive workor school-related illness among workers or students in buildings of recent construction.” With time, however, these toxic levels gradually decrease.

High amounts of volatile organic compounds can also be found in offices. These compounds are emitted from copying machines, laser printers, computers, and other office equipment.

Have you been experiencing headaches that get more severe at work? Are your eyes itchy, red, and watery? What about a sore throat, dizziness, nausea, and problems concentrating? These are just a few of the many symptoms associated with sick building syndrome.

Other symptoms of sick building syndrome include nasal congestion, shortness of breath, problems with memory and concentration, fatigue, and itching. In addition, carpet glues as well as particleboard, which is also made from glues and chemicals that contain formaldehyde, commonly cause both fatigue and headaches.

## **Are You Breathing in Bacteria, Mold, and Yeast?**

New materials are not the only cause of sick building syndrome. Airborne mold, bacteria, and the poisons given off by yeast can also cause sick building syndrome. Many people remember the mysterious deaths in 1976 of 182 Legionnaires who were staying at a Philadelphia hotel while attending a conference. It was later determined that this group of people contracted pneumonia from legionella bacteria that had contaminated the

hotel's air conditioning system. Before this event, occurrences of sick building syndrome were virtually unheard of.

Nevertheless, many, if not most, air conditioning units and heating systems contain some amount of mold. Significant amounts are frequently found in them, and the spores from that mold can travel throughout a building.

Mold grows wherever dampness is found, which makes air conditioning units incubators for it. Damp homes not only breed mold, but they also breed dust mites. Dust mites are the most common airborne allergy.

## [Pesticide Pollution](#)

Dampness is not the only danger to a healthful indoor environment. Dangerous indoor pollution is also created with the ever-increasing use of pesticides, which can be found in some really surprising products.

Believe it or not, pesticides can be found in disposable diapers, shampoos, air fresheners, mattresses, and carpets. You are being exposed to pesticides every day. You may even have your home sprayed regularly with pesticides to control bugs.

The most common pesticides in use today are of a variety called *organophosphates*. This group includes diazinon, which was pulled off the market as of December 31, 2004 by the EPA. The University of California recently found that prenatal exposure to organophosphate pesticides is related to lower intelligence scores in children by age seven.<sup>[32](#)</sup> Researchers have also suggested a link between exposure to organophosphate pesticides and ADHD in children.<sup>[33](#)</sup>

Pesticides are easily absorbed into your body through contact with your skin, by breathing them into your lungs, and by ingesting them through your mouth. Even though your body is designed to eliminate such dangerous poisons, the sheer amount of them that you encounter daily is far more than your body was ever designed to deal with. Therefore, pesticides, their metabolites, and other dangerous toxins eventually build up in your body over time. And the greater the buildup, the more difficult it becomes for your body to eliminate them. When such a residue of pesticides builds up in your body, you can begin to experience the following symptoms or diseases:

- Memory loss

- Depression
- Anxiety
- Psychosis and other forms of mental illness
- Parkinson's and other forms of neurological degeneration
- Possibly hormone-sensitive cancers such as breast and prostate cancer

## **Are You Being Forced to Inhale Secondhand Smoke?**

Another powerful offender is cigarette smoke. The smoke from a burning cigarette as it sits lit in an ashtray contains a higher toxic concentration of gasses than what the smoker actually inhales.<sup>34</sup>

Secondhand cigarette smoke contains cadmium, cyanide, lead, arsenic, tars, radioactive material, dioxin (which is a toxic pesticide), carbon monoxide, hydrogen cyanide, nitrogen oxides, nicotine, sulfur oxides, and about seven thousand other chemicals.

Nicotine in the cigarette smoke is the main cause for the cigarette addiction. However, nicotine also constricts blood vessels and stimulates the cardiovascular system and the nervous system. The cancer-causing substances and toxins found in the tars in smoke are the main dangers of cigarette smoke.

## **Beware of Sunscreen**

As careful as most of us—especially women—are to protect our skin with a measure of SPF protection every day, a recent study by the Centers for Disease Control and Prevention (CDC) found that most sunscreens, moisturizers, lip balms, lipsticks, fragrances, and other cosmetics often contain a damaging chemical called oxybenzone.<sup>35</sup> This chemical has been linked to allergies, hormone disruption, and cell damage, as well as low birth weight in baby girls whose mothers are exposed to the chemical during pregnancy.

Additionally, oxybenzone is a penetration enhancer, which means it eases the penetration of the skin for other chemicals with which it is combined.

Take care with the sunscreen and cosmetic products you choose to use on your skin—choose natural products that don't contain oxybenzone!

## [Toxins in Our Food and Land](#)

Pesticides continue to be sprayed onto our land, subsequently making their way into our food supply. As we eat pesticide-tainted fruits and vegetables, and especially fatty meats, pesticides become stored in our fatty tissues, which not only include our adipose tissue but also the brain, the breasts, and the prostate gland.

Every year approximately 877 million pounds of pesticides and herbicides are sprayed on the crops in America that make up our food supply—that's close to 1 billion pounds of toxic chemicals intentionally introduced into our environment and food supply *each year!*[36](#) In addition, the herbicide glyphosate has more than doubled in use between 2001 and 2007, from 85–90 million pounds per year to 180–185 million pounds. Chlorine and hypochlorites make up 51 percent of the pesticides used in the United States.[37](#)

The farmers who work closely with these chemicals are at a greatly increased risk of developing certain cancers, especially brain cancer, prostate cancer, leukemia, and lymphoma. Studies on farmers reveal that as their exposure to pesticides and herbicides is increased, so is their risk for non-Hodgkin's lymphoma.[38](#)

Furthermore, a recent report by the Pesticide Action Network North America and Commonwealth found that Americans are exposed to up to seventy residues of persistent organic pollutants (POPs) per day in their diets. "Exposure to POPs has been linked to serious disease and developmental disorders, including breast and other types of cancer, immune system suppression, nervous system disorders, reproductive damage, and disruption of hormonal systems."[39](#)

Although POPs have been banned in the United States, other countries still manufacture and use the chemicals, and their residues are leaked into our air and water supplies. This has led to the finding that virtually all foods are contaminated with the POPs that have been banned from the United States—it isn't uncommon for our daily diet to contain food items touched by three to seven POPs.[40](#)

Some of these dangerous substances are known to last for hundreds and even thousands of years before breaking down.

DDT is an example of a chemical that doesn't break down. It was used in this country on a large scale from the early 1940s to 1972. It is an extremely dangerous poison that was banned in 1972 due to its devastating effect on wildlife, causing multiple abnormalities in the egg shells of many birds and deformities of reproductive organs of many other animals. Bald eagles, condors, alligators, and other animals developed deformities, and their populations decreased dramatically. Nevertheless, DDT residues are still present in the bodies of practically all Americans. DDT belongs to the class of pesticides known as organochlorines. Many of these have been known to cause cancer and birth defects. They are also stored in the body's fatty tissues.

In 1962, environmentalist Rachel Carson wrote a book called *Silent Spring*, which demonstrated the toxic and deadly effect that DDT has on our food chain.[41](#)

Carson warned us that if pesticides could have such harmful and dramatic effects on animals and birds, then their effects upon humans would be no different. Nearly forty years ago, this insightful woman actually predicted the global consequences of environmental pollution in her eye-opening book.

Despite the ban of DDT, it still found its way into our soil and our vegetables, especially root vegetables such as potatoes and carrots.

There are over six hundred pesticides used in the United States. However, the Environmental Protection Agency has named sixty-four pesticides as potentially cancer-causing compounds. For more information on pesticides in our food please refer to my book *Living in Divine Health*.

As I stated before, all of us here in the United States have residues of DDT, or its close relative DDE, in our fatty tissues.[42](#) Tragically, even though many of these extremely dangerous toxic pesticides were banned for use in the United States, manufacturers are still permitted to export them abroad. We send these poisons to Mexico and other third-world countries for their crops, and then import foods tainted with them back into this country.

Dairy products are one of the main sources of DDT in our diets, and freshwater fish is usually tainted with DDT and PCB.

Pesticides have been linked to a lower sperm count in men and to higher amounts of xenoestrogen in women. Xenoestrogens are chemical counterfeits that fool the body into accepting them as genuine estrogen. These estrogens are more potent than the estrogen made by the ovaries. When this occurs, a woman's hormones can get way out of balance, leading to symptoms of PMS, fibrocystic breast diseases, and potentially endometriosis. It can even have a stimulating effect on breast cancer and endometrial cancer.[43](#)

## **Waxes That Don't Wash Off**

No doubt you've tried to wash off a shiny red apple or a dark green cucumber, only to find that it was covered with a layer of waxy film that's nearly impossible to wash off.

Growers do this on purpose. Thick waxes are applied to nearly everything we buy in the produce section of our grocery stores. The wax keeps the produce from dehydrating by sealing in water and also gives vegetables more eye appeal. Fruits and vegetables that have been waxed look bright, shiny, and healthy.

Many of these waxes, however, contain powerful pesticides or fungicides that have been added to keep the food from spoiling. These waxes are made to stay on, not wash off. Nevertheless, if you want to stay healthy, remove them. Also be aware that some fruits and vegetables are more prone to be awash in pesticides than others. The greatest culprits are known as the "dirty dozen," indicated in the chart below[44](#) —when consuming these fruits and vegetables, be sure to buy organic. And better yet, choose many fruits and vegetables from the "clean fifteen" list on a regular basis. Research has shown that those who eat from the "clean fifteen" list ingest fewer than two pesticides daily, compared with ten pesticides a day when eating from the "dirty dozen" list.

### **YOUR GUIDE TO PESTICIDES IN FRUITS AND VEGETABLE**

<b>Dirty Dozen Most Pesticides</b>	<b>Clean Fifteen Least Pesticides</b>
Apples	Onions
Celery	Sweet corn

Strawberries	Pineapple
Peaches	Avocado
Spinach	Asparagus
Nectarines	Sweet peas
Grapes (imported)	Mangoes
Bell peppers	Eggplant
Potatoes	Cantaloupe
Blueberries	Kiwi
Lettuce	Cabbage
Kale/collard greens	Watermelon
	Sweet potatoes
	Grapefruit
	Mushrooms

## **Pesticides in Animal Feed**

Not only can heavy concentrations of pesticides be found in the fruits and vegetables we eat, but they are also in animal feed. Therefore our meat supply ends up tainted with pesticides too.

Pesticide chemicals accumulate in the fatty tissues of the animals we eat. When we bite into a fatty piece of steak, a greasy hamburger, sausages, bacon, or even butter and cream, we are ingesting even more pesticide residues.

One of the greatest culprits found in animal feed is, believe it or not, arsenic—more commonly known as poison. In research conducted by the Institute for Agriculture and Trade Policy, arsenic was detected in 55 percent of uncooked chicken purchased from local grocery stores. The most contaminated products had ten times a higher arsenic level than the least contaminated products. Tyson and Foster Farms were among the brands with the least detectable traces of arsenic.[45](#)

## **Toxic Fat?**

Are you overweight, even a little? Your body is designed to eliminate the toxins you eat. But when pesticides are not broken down and eliminated from your body, they usually become stored in your fatty tissues. Consider those love handles a hiding place for stored toxins and poisons. In other words, fat is usually toxic too.

Since your brain is composed of about 60 percent fat, some of these poisons will end up being stored in it as well as in the breasts, prostate gland, and any other fatty tissue in the body.

### **In the brain**

Many of those suffering with neurological diseases probably have higher levels of pesticides stored in their brains and other fatty tissues.

Have you ever gone on a diet, only to find that you feel more forgetful, foggy-minded, and fatigued? When you diet, those pesticides stored in your fatty tissues can be released and may be deposited in the fatty tissue of the brain. You see, often the liver is unable to break down and eliminate adequately the pesticides that have been liberated from your fatty tissues. This can send even more of these residues to the brain as they seek a place to be stored.

### **In the breasts**

As I mentioned, certain pesticides can pass themselves off in the body as the female hormone estrogen. Therefore, such toxins are called xenoestrogens.

Since high levels of estrogen are linked to breast cancer, high levels of counterfeit estrogens, or xenoestrogens, can also promote cancer. Xenoestrogens mimic estrogen by stimulating estrogen receptors in the body. Therefore, when you ingest increasing levels of certain pesticides, the incidence of breast cancer rises.

For example, a study from Israel showed a decline in the incidence of breast cancer among Israeli women following the enactment of a law against using pesticides.[46](#)

Here in the United States, we manufacture more than 1.3 billion pounds of pesticides every year. That means each one of us is exposed to pesticides every day. Various types of pesticides can actually act even more powerfully as they are combined with others, dramatically increasing their toxicity.

## Toxins in Our Water

Most chemicals that have been emitted into our air, sprayed on our farmlands, or dumped in our landfills will eventually end up in our water. Rains wash these chemicals out of the air and off our land into our lakes and rivers.

Pesticides, herbicides, and fertilizers, which contain nitrates, eventually end up in underground aquifers. The toxins gathered in chemical waste sites and dump sites, including landfills, can also eventually seep into our water supplies and contaminate them. Even underground storage tanks that hold gasoline can leak into the ground water. Rainstorms can actually wash these toxic chemicals into streams and larger bodies of water. Sooner or later, they find their way into our drinking water supply.

The Kellogg Report stated that the growth of industry in this century has been responsible for the introduction of new, complex, and sometimes lethal pollutants into our nation's water systems. Municipal treatment plants neither detect nor detoxify the water supply of the majority of chemical pollutants, according to the report.[47](#)

Undrinkable water is now a major problem in the United States due to chemical pollution. About 50 percent of our underground water, or ground water, is contaminated.

Ground water supplies drinking water for approximately half of the people in America. Often municipalities treat ground water with aluminum to remove organic material, and traces of aluminum remain in the drinking water.

Chlorine is added to the water to kill microorganisms. Chlorine can also combine with organic materials to form trihalomethanes, which are cancer-promoting substances. We increase our risk of developing bladder and rectal cancer by drinking chlorinated water. In fact, the risk increases as our intake of chlorinated water increases.

Trihalomethanes such as chloroform evaporate out of the water during a hot shower and are then inhaled. In fact, a ten-minute hot shower can increase the chloroform absorbed into our bodies more than drinking one-half gallon of chlorinated tap water.

Although chlorine kills most bacteria, it does not kill viruses and parasites. Parasites include protozoa such as amoeba, giardia, and cryptosporidium. Parasites also include the helminths, which are worms,

and arthropods, which are ticks, mites, and other bugs. Giardia is one of the major causes of diarrhea in day-care centers. Giardia contaminates many of the lakes and streams in America. You may be drinking them in your own water.

### **TOP 10 MOST COMMON TOXINS IN THE AIR, WATER, OR FOOD SUPPLY<sup>48</sup>**

<b>Toxin</b>	<b>Major Sources</b>	<b>Risks</b>
PCBs (polychlorinated biphenyls)	Farm-raised salmon	Cancer, impaired fetal brain development
Pesticides	Fruits, vegetables, commercially raised meats, bug sprays	Cancer, Parkinson's disease, miscarriage, nerve damage, birth defects, blocking absorption of food nutrients
Mold and Fungus	Contaminated buildings, peanuts, wheat, corn, alcoholic beverages	Cancer, heart disease, asthma, multiple sclerosis, diabetes

<b>Toxin</b>	<b>Major Sources</b>	<b>Risks</b>
Phthalates	Plastic wrap, plastic bottles, plastic food storage containers	Endocrine system damage
VOCs	Drinking water, carpet, paints, deodorants, cleaning fluids, varnishes, cosmetics, dry-cleaned clothing, moth repellants, air fresheners	Cancer, eye and respiratory tract irritation, headaches, dizziness, visual disorders, memory impairment
Dioxins	Animal fats	Cancer, reproductive and

		developmental disorders, chloracne, skin rashes, skin discoloration, excessive body hair, mild liver damage
Asbestos	Insulation on floors and ceilings, water pipes and heating ducts from the 1950s-1970s	Cancer, scarring of lung tissue
Heavy metals	Drinking water, fish, vaccines, pesticides, preserved wood, antiperspirant, building materials, dental amalgams, chlorine plants	Cancer, neurological disorders, Alzheimer's disease, foggy head, fatigue, nausea, vomiting, decreased red and white blood cells, abnormal heart rhythm, damage to blood vessels
Chloroform	Air, drinking water, food	Cancer, reproductive damage, birth defects, dizziness, fatigue, headache, liver and kidney damage
Chlorine	Household cleaners, drinking water	Sore throat, coughing, eye and skin irritation, rapid breathing, wheezing, lung collapse

## [Chemical Chaos and Wildlife](#)

Pesticides, solvents, industrial chemicals, industrial waste, petroleum products, and thousands of other chemicals are already exacting a terrible toll on our wildlife.

Here in Florida where I live, we saw this close up at Lake Apopka, a beautiful body of water I drive by often.

In the book *Our Stolen Future*, Theo Colborn recorded the effects of a pesticide spill that occurred in 1980 in Lake Apopka. Following the spill, the alligator population was studied by a biologist from the University of Florida, along with a biologist from the US Fish and Wildlife Service and the Florida Game and Freshwater Fish Commission. They found that the female alligators' ovaries had abnormalities in both their eggs and egg

follicles, similar to what happens in humans who are exposed to DES early in childhood.

The male alligators revealed structural abnormalities as well. Their testes and penises were smaller than normal. In addition, the males also had elevated levels of estrogen and significantly reduced levels of testosterone.[49](#)

The pesticide spill also affected turtles in Lake Apopka. Researchers found a striking absence of male turtles. They found many female turtles in the lake and many turtles that were neither male nor female, which resulted from a large-scale hormonal disruption due to the pesticide in the lake. The turtles that should have become males ended up being neither male nor female and therefore remained unable to reproduce.[50](#)

This study has scary implications for more than just wildlife, for if the hormonal disruption of reptiles can create such effects, what might happen to people over the long term? It's certainly worth thinking about.

Nevertheless, if the poisoning of our planet by all these pesticides isn't enough to create alarm, they are not the only environmental toxins your body must battle. Solvents found in cleaners may also contain dangerous poisons as well.

## **The Dangers of Solvents**

Solvents, which are chemicals used in cleaning products, are everywhere. Solvents dissolve other materials that otherwise would not be soluble in water.

Solvents can injure your kidneys and liver. They can also depress the elaborate central nervous system of your body.

Like pesticides, solvents are fat-soluble, which simply means that they are likely to be stored in your fatty tissues, including, of course, your brain.

Solvents have the ability to dissolve into the membranes of your cells, especially your fat cells, and accumulate there. Formaldehyde is commonly used as a solvent in many different ways. Manufacturers use it to make drapes, carpet, and particleboard—even cosmetics!

Phenol is another common solvent widely found in cleaning products. This dangerous chemical is actually used in making aspirin and sulfa drugs. Your skin easily absorbs phenol.

Toluene is another solvent that is similar to benzene. It is used for making a variety of different glues and typewriter correction fluids. If you have elevated levels of toluene in your body, you might experience arrhythmias of the heart as well as nerve damage.

Benzene is a solvent used in making dyes and insecticides. Long-term exposure to benzene can cause leukemia.

The final solvent we are going to look at is vinyl chloride, which is used in the manufacture of PVC pipes and plastic food wrappers. This chemical has been linked to several types of cancers and sarcomas.

Other common toxins include the industrial chemical PCB, which was banned in 1977. Many lakes and streams are contaminated with PCB. Increased amounts of PCB in the body are associated with an increased risk of cancer, including liver cancer and melanoma. A great percentage of people have PCB in their fatty tissues.

Heavy metals such as mercury, lead, cadmium, and arsenic are also commonly stored in our bodies due to our toxic environment.

Not only are we exposed to pesticides and solvents, but also our bodies must deal with about three thousand different chemical food additives.

## [An Abundance of Mercury](#)

For many reasons, exposure to mercury has become a chronic and dangerous reality. When exposed to the central nervous system, mercury can cause psychological, neurological, and immunological problems, not to mention having a long half-life in the body of fifteen to thirty years. Toxic exposure to mercury has been associated with Alzheimer's disease, autoimmune disease, kidney dysfunction, infertility, food allergies, multiple sclerosis, and an impaired immune system.[51](#)

Dental amalgams are likely the worst culprit for our exposure to mercury, with one dental amalgam filling releasing up to 15 micrograms of mercury per day. For the average individual, who has up to eight amalgam fillings, this means an individual potentially absorbs up to 120 micrograms of mercury per day from this one source that passes readily through cell membranes and into the blood brain barrier.[52](#) The mercury continually releases vapors throughout the life of the filling, and activities such as chewing, brushing, and the intake of hot fluids stimulate its

release. I highly recommend that you consult with a dentist specially trained in the removal of amalgam fillings. (See Appendix D.)

A second high-risk source of mercury is in our food supply through the consumption of fish and shellfish. Although fish and shellfish contain high-quality protein and are a good source of omega-3 fatty acids, nearly all fish and shellfish contain traces of mercury, as mercury is released into the atmosphere in great measure through pollution and then poisons our water sources.<sup>53</sup> My strongest suggestions would be to avoid eating shark, mackerel, swordfish, and tilefish, which have been shown to contain very high levels of mercury, and to instead choose wild Alaskan salmon. A high-quality fish oil supplement is also a wonderful alternative to fish consumption.

One additional powerful way to combat the toxicity of mercury in our bodies is through increasing the amount of the antioxidant glutathione, which we will explore in a later chapter.

## **Food Additives and Flavorings**

Food additives are a long list of chemical substances that are added to your food for flavor, color, to make it last longer, and for a host of other reasons. The largest group of food additives is the flavorings. Most of these flavoring agents are synthetic versions made from chemicals. Another group of food additives includes coloring agents, and most of these are also synthetic chemicals.

This may surprise you, but chemical food additives are usually made from petroleum or coal tar products!

Other food additives include preservatives, phosphates, bleaching agents, emulsifiers, texturizers, humectants, and ripening agents, such as ethylene gas, which is sprayed on bananas to make them ripen faster.

### **Tips to Avoid Toxins<sup>54</sup>**

1. *Choose organic produce and free-range, organic meat.* If you can only purchase one organic product, choose eggs or milk. If possible, always purchase free-range, organic chicken and beef.
2. *Choose quality fish oil rather than fish.* Fish is often contaminated with PCBs and mercury, so choose a high-quality fish oil instead.

3. *Avoid processed foods.* Remember, they're processed with chemicals!
4. *Only use natural cleaning products.* Most health food stores have natural cleaning products available.
5. *Switch to natural brands of toiletries.* This includes shampoo, toothpaste, deodorants, and cosmetics. Again, they're available at your local health food store.
6. *Avoid insect repellants that contain DEET.* Instead, choose a safe, effective, and natural alternative.
7. *Gradually remove metal fillings in your teeth.* These are a major source of mercury, which promotes toxic buildup in your body. Consult with a biological dentist. (See Appendix D.)
8. *Avoid artificial air fresheners, dryer sheets, fabric softeners, or other synthetic fragrances.* These can pollute the air you're breathing.
9. *Avoid artificial food additives.* This includes artificial sweeteners and MSG.
10. *Get safe amounts of natural sun exposure (10–20 minutes a day) to boost your vitamin D.* This will also boost your immune system!

## **Conclusion**

So you can see that even your immune system is being bombarded with toxic chemicals from every direction. You are being exposed to pesticides, food additives, solvents, and other chemicals through both your food and environment every day.

If that were not enough, your body must also contend with another entire array of toxins that it produces itself from within. Let's go to the next chapter and take a look.

## CHAPTER 2

# A TOXIC BATTLE WITHIN

IF YOU LIVED IN A PERFECT, UNSPOILED ENVIRONMENT WITH NO chemicals or poisons, your body would still produce its own toxins. Just like the engine of a car that creates exhaust as it burns fuel to run, in a much more profoundly complex and wonderful way, your body creates many different toxins in an infinite variety of ways just to function. In a perfect environment, dealing with your body's internal toxins would be a cinch for your liver and excretory system. But when your liver and GI tract and the organs and tissues of the body are bombarded both from without and within with far more toxins and free radicals than they were ever designed to handle, it can begin to scream for toxic relief. Not only does your liver have thousands upon thousands of chemical toxins that come from external sources with which to contend, your body must deal with its own manufactured toxins. Let's take a look at the toxic battle that rages against your body from within.

## The Antibiotic Attack

Which one of us has not taken antibiotics for a bad case of sinusitis, strep throat, bronchitis, or a serious infection? Going to the doctor and getting antibiotics today is about as common as eating a peanut butter sandwich. But if you have had repeated bouts of antibiotics, or even a single bout of super antibiotics, then you could be at risk for developing an overgrowth of yeast and dangerous intestinal bacteria. Let me explain.

Your intestines are filled with good bacteria called *lactobacillus acidophilus* and *bifidus* that prevent the overgrowth of bad bacteria (called *pathogenic bacteria* or *microbes*) in your intestinal tract. When you take antibiotics, many of your body's beneficial bacteria can be killed. Your good bacteria function like a firewall to keep pathogenic bacteria and yeast in check. So when antibiotics throw off the balance, the bad or pathogenic bacteria may grow like a wildfire, out of control with nothing to slow it down or stop it.

Now your body is in trouble, for bad bacteria may produce endotoxins, which may be as toxic as almost any chemical, pesticide, or solvent that enters your body from the outside.

Overgrowth of bacteria in your small intestines can cause excessive fermentation, similar to the fermentation that happens when you leave apple cider outside for too long. This fermentation process creates even more poisons, including *indoles*, *skatols*, and *amines*.

## **The Nightmare of Candida**

Without antibiotics we'd be in trouble. Infections that might have snuffed out a life a century ago are little more than a nuisance today. But we are just beginning to get a full picture of the toll that the overuse of antibiotics has taken on a generation of users.

Mostly unheard of in centuries past, an epidemic of candida and yeast overgrowth in the intestinal tract has swept through our nation. When the body's delicate balance of good bacteria and yeast is out of balance, a host of symptoms and diseases can result, ranging from relatively minor GI disturbances such as bloating, gas, and irritable bowel syndrome to major diseases such as psoriasis, colitis, and Crohn's disease.

Just like a biblical plague of locusts that ravaged ancient farmlands, yeast overgrowth causes damage to the intestines like a plague of toxins. These toxins produced by yeast are absorbed through your intestines and create devastation to the inside of your body similar to disaster upon the land caused by biblical plagues.

For example, candida albicans releases over eighty different poisons into the body. The most toxic substances produced by candida albicans are acetaldehyde and ethanol, which is alcohol.

Acetaldehyde is related to formaldehyde, which is the dangerous solvent found in carpets and pressed wood. Formaldehyde is dangerous enough in the small amounts that you might breathe in, but can you imagine what the effect to your body would be of drinking it? The consequences of having it produced inside your body are potentially disastrous!

Acetaldehyde is also extremely toxic to the brain, even more so than ethanol. It causes memory loss, depression, problems concentrating, and severe fatigue.

When you consider the potential danger of having strong, devastating poisons created inside your body, you will recognize that the toxins within can do as much or even more damage than environmental toxins.

You may be thinking, “Whew! I’m glad I don’t have candida!” If you don’t, I’m glad too. Nevertheless, that doesn’t mean that your body isn’t battling a toxic war every single day. With or without candida, your cells are in armed combat.

## **The Molecular Warfare of Free Radicals**

While you are going about your daily business, a war is raging inside your body at the molecular level. Free radicals are similar to machinegunning microscopic shrapnel, injuring your cells throughout the day. Let me explain.

For a moment, picture an atom. It has a nucleus, and it has electrons around it. The nucleus is positively charged, and the electrons are negatively charged. It would look something like the sun with the planets around it.

What happens when someone blows smoke in your face or you are exposed to air pollution or radiation? Or what happens when you ingest some chemical or pesticide? When the toxin enters a cell, the free radicals created by one of these toxins can pull one of the electrons out of orbit. Thus, massive instability begins at the molecular level—remember these are living, electrically charged cells. When the atom, which is missing an electron, becomes unstable, it begins to grab electrons from other nearby molecules to replace it, causing chain reactions.

These unstable electrons are called *free radicals* because they have been freed or liberated from where they were. The chain reactions caused by liberated electrons can send free radicals spraying through your bloodstream and cells, tissues, and organs throughout your body, wreaking great havoc and even possibly setting the stage for cancer, heart disease, and a host of other degenerative diseases.

Think what would happen if a large crane were driven through the streets of Manhattan with an uncontrolled wrecking ball swinging from side to side. The skyscrapers might not fall, but they would be severely damaged. That’s similar to what free radicals can do to your cells, tissues, and organs.

On a different level, free radicals are also formed during the process of oxidation. For example, when metals are oxidized, rust is produced. When oxidation occurs on painted surfaces, the paint begins to flake off. When you cut an apple in half, it turns brown—that is *oxidation*. It also occurs when meat rots. Our bodies are undergoing oxidative processes every day.

Oxidation is actually caused by free radicals. But what happens when you place lemon juice on an exposed slice of an apple?

The apple slice doesn't turn brown as rapidly because the antioxidants in lemon block the oxidative process—it slows the formation of free radicals.

Each of your body's trillions of cells has a protective wrapping around it made of lipids or "fatty" cell membranes. But free radicals, like wrecking balls, can start ricocheting off the cell membranes—damaging the cell membranes and eventually damaging intracellular structures such as the mitochondria, nucleus, and other organelles.

When wood is burned in a fireplace, smoke is produced. In the body, every cell contains mitochondria that produce energy. The heart muscle cells have thousands of mitochondria because they need a lot of energy, but the fat cells have the fewest mitochondria. Oxygen combines with glucose in the mitochondria to produce energy. However, in the process of energy production, damaging free-radical forms of oxygen are produced instead of smoke. In other words, when wood is burned, smoke is produced. But in our bodies, when energy is produced, free radicals are formed such as singlet oxygen and hydrogen peroxide.

When free radicals begin a chain reaction, they must be stopped quickly. Antioxidants from our diet or supplements and antioxidants produced in our bodies rush to the rescue instantly to quench the freeradical fire of activity. Many free radicals occur with normal metabolic processes in all cells in the body. Internal antioxidants produced by our body such as superoxide dismutase, glutathione peroxidase, and catalase work as antioxidants controlling free-radical production.

But problems occur when the level of free-radical activity gets out of control. When the body is overburdened with free radicals from air pollution, pesticides, cigarette smoke, fried foods, trans fat, sugars, and polyunsaturated fats in our diet, excessive stress, inadequate sleep, etc., then excessive amounts of free radicals ravage our cells. They can actually cause the breakdown of the fats in the cell membranes, ravage the proteins

and enzymes, and then eventually damage DNA, actually causing mutations. These mutations may eventually result in cancer. Free radicals can also damage the cell membranes and nuclear membranes, depleting our energy and setting us up for degenerative disease. So you see, free radicals are bad news!

## [A Way of Escape](#)

At this point you may be feeling a bit overwhelmed by the monumental battle your cells, tissues, and organs are being faced with each day. Look in the mirror and see the results of this war: premature aging, wrinkles, sagging skin, sickness, chronic fatigue, arthritis, cancer, heart disease, and so much more.

Your body is under an aggressive, ongoing assault against an evergrowing burden of toxins that is probably already causing a heavy toll upon your health—whether or not you even know it. But the good news is that you don't have to sit by passively while your God-given entitlement to good health is stolen right out from under your nose. There is toxic relief!

As I mentioned earlier, your body is designed with an incredible system of defense that keeps you healthy even under extreme circumstances—and you never have to give it a second thought. But when you become overwhelmed with toxins or your excretory systems are not working up to par, your liver and excretory system eventually become overburdened. They simply cannot keep up.

Nevertheless, you can choose to step in and even the score. By undergoing the program of detoxification outlined in the following chapters, you can cleanse your body from a lifetime of toxins and discover the health and vitality that come with toxic relief. Since the burden of toxins has built up in your body over time, you may have learned to accept the fatigue and general lack of vitality that toxicity causes. You'll simply be amazed at how much better you will feel after freeing your body of its toxic burden.

In my practice, I've encouraged many of my chronically ill patients to undergo detoxification. The results have been simply astonishing. Heart disease, diabetes, hypertension, arthritis, chronic fatigue, and many other serious diseases are being absolutely reversed as my patients cleanse their

own bodies from toxins. Later in this book you'll find a chapter devoted to detoxing for specific diseases.

In addition, if you are overweight or obese, this program of detoxification has the added benefit of slimming you down. And as you've seen, many of the toxins that are stored in your body get trapped in tissue, especially belly fat. Therefore, your health will improve dramatically once those toxins are removed and not just recirculated to other areas of the body. Not only will you feel better and live longer, you'll look better too.

## **In Conclusion**

Here's an overview of my toxic relief program. Plan to commit about a month to feeling better and looking better:

- You will start by undergoing a two-week diet to strengthen and support your liver and improve your elimination through the GI tract.
- Then you will go on a juice fast for three to seven days (or longer if monitored by a doctor). You will go back on the special diet for your liver and GI tract for another two weeks.
- You will begin making lifestyle changes and plan to fast periodically to continue to cleanse and maintain your health.

There you have it! As you go through this program, you will discover renewed energy, rejuvenated health, and a fresh, glowing sense of vitality that will absolutely astonish you.

Toxic relief is for your total person. As you learn about this program of toxic relief, you will discover that not only does your body labor under a burden of physical toxins, but also your soul and spirit wage their own battle against toxins on another front. As you read through this book, you will discover that this program of toxic relief addresses your soul and spirit too. So get ready for a brand-new you—inside and out, body, mind, and spirit!

Now that you've seen the truly overwhelming toxic picture, turn with me to begin to find healthful, vital, life-giving toxic relief. But first we must face the terrible truth about the American diet.

## Chapter 3

# OVERNOURISHED WHILE STARVING?

AN OLD PROVERB SAYS THAT A MAN DIGS HIS OWN GRAVE WITH HIS fork and knife. It's absolutely true! Today in America, we are one of the most overfed and undernourished societies that ever lived.

## Facing the Terrible Truth About the American Diet

Most of America's health problems today are caused by dietary abuses. Elizabeth Frazao of the US Department of Agriculture reported poor eating habits are linked to more than half of the deaths in the United States.

Diet is a significant factor in the risk of coronary heart disease (CHD), certain types of cancer, and stroke—the three leading causes of death in the United States, and responsible for over half of all deaths . . . . Diet also plays a major role in the development of diabetes (the seventh leading cause of death), hypertension, and obesity. These six health conditions incur considerable medical expenses, lost work, disability, and premature deaths—much of it unnecessary, since a significant proportion of these conditions is believed to be preventable through improved diets.<sup>1</sup>

### Sugar addicts

For starters, we're a nation of sugar addicts. The average American consumes 11,250 pounds of sugar during his or her lifetime, which is about 150 pounds of sugar per person per year. That's half a truckload! That means that we're shoveling a small mountain of sugar into our bodies throughout our lifetimes.<sup>2</sup>

### Processed foods

Processed foods are convenient and inexpensive: for example, white bread, hot dogs, bologna, and so on. However, the price you will be paying in the future does not justify the short-term convenience. We really end up robbing Peter to pay Paul.

Processed foods are another method of dietary abuse of our bodies. They generally are so manipulated to prolong shelf life that they are grossly deficient in nutrients. They usually contain food additives, sweeteners, flavorings, coloring agents, preservatives, bleaching agents, emulsifiers, texturizers, humectants, acids, alkalis, buffers, and other chemicals. As a result of ingesting processed foods, our tissues and organs must continually draw from our bodies' stored nutrient reserves, setting us up for nutrient deficiencies. No wonder we are overfed with processed foods yet undernourished. Such foods provide loads of calories with little nutrition.

### **Dead foods**

Devitalized food is another way of abusing our bodies instead of nourishing them. When foods have been grown in nutrient-poor soil, they end up looking pretty, but that's about all. When our soil has been robbed of important minerals and nutrients, the food it produces will be nutritionally poor as well.

### **Toxic fats**

Hydrogenated and partially hydrogenated fats or trans fats are the most toxic of all fats and are present in most margarines, commercial peanut butters, shortening, soups, packaged foods such as cake and biscuit mixes, fast food, frozen food, baked goods, chips and crackers, breakfast foods, cookies and candy, toppings and dips, etc. These are very inflammatory fats that contribute to plaque formation in arteries. Deepfried foods—especially when fried in polyunsaturated fats—are also very toxic and inflammatory and contribute to a buildup of plaque in arteries.

### **Fast foods**

Fast foods, fried foods, and eating way too much meat while denying our bodies healthful fruits and vegetables are, again, just more ways in which we abuse our bodies through our diets.

### **Genetically modified foods (GMOs)**

The National Academy of Sciences released a report stating that genetically engineered products introduce new allergens, toxins, disruptive chemicals, and unknown protein combinations into our bodies. Pesticidal foods have been grown that are genetically engineered to produce their own pesticide. When we ingest these foods, we will also be ingesting the pesticide produced by the food. It's too early to tell all the side effects and dangers of these foods. However, we are already seeing the allergic effects.

It's easy to see why we're overfed and undernourished. We gorge ourselves with increasing amounts of food to respond to our bodies' cravings for nutrition. After we've eaten, our bodies, even though under a heavy burden of calories, still realize that they never received the nutrients they needed. So our brains send more signals, triggering hunger, which is interpreted by us as the need or desire for even more food. We end up spiraling down into a vicious cycle of overfeeding with empty foods, craving more nutrition and overfeeding again with even more empty processed, devitalized, sugary foods.

### **TWELVE FOOD ADDITIVES TO AVOID<sup>3</sup>**

<b>Additive</b>	<b>Source</b>
Sodium Nitrate (also called Sodium Nitrite)	Bacon, ham, hot dogs, lunch meats, smoked fish, corned beef
BHA and BHT	Cereals, chewing gum, potato chips, vegetable oils
Propyl Gallate	Meat products, chicken soup base, chewing gum
Monosodium Glutamate (MSG)	Soups, salad dressings, chips, frozen entrees, restaurant food
Trans Fats	Restaurant food
Aspartame	Diet foods, low-calorie desserts, gelatins, drink mixes, soft drinks
Acesulfame-K	Baked goods, chewing gum, gelatin desserts
Food Colorings: Blue 1, 2, Red 3, Green 3, Yellow 6	Beverages, candy, baked goods, pet food, cherries, fruit cocktail, sausage, gelatin

Olestra	Potato chips
Potassium Bromate	White flour, breads, rolls
<b>Additive</b>	<b>Source</b>
White Sugar	Baked goods, cereals, crackers, sauces, processed foods
Sodium Chloride	Salt

The end result is ever-expanding waistlines, thighs, and buttocks. We get fatter and fatter, forcing our bodies to groan under the burden of extra pounds. But in terms of actual nourishment, we give our bodies less and less.

## [Obese While Starving?](#)

We may be actually starving from a nutritional standpoint, while at the same time becoming grossly obese. The end result of this merciless abuse of our bodies is disease and death. Sadly, we really are digging our graves with our forks and knives!

As a result of our overindulgences we have an epidemic of heart disease, atherosclerosis, hypertension, diabetes, cancer, allergies, obesity, arthritis, osteoporosis, and a host of other painful and debilitating degenerative diseases.

## [Eating Too Much of the Wrong Stuff?](#)

Many people have the mistaken notion that they can exist on junk food day by day and then take a multivitamin or a multitude of vitamins a day and still maintain excellent health. Some people even do this trying to reverse degenerative diseases. Unfortunately, many doctors and nutritionists are pushing this fallacy, often out of ignorance.

Taking vitamins and other nutrients and continuing to eat poorly is similar to never changing the oil or oil filter in your car and yet continuing to drive it. Periodically you might add small amounts of oil to the car to keep the oil level in normal range. This is, in essence, what most people are doing in their mistaken belief that they can continue to eat junk food, yet take a vitamin a day or multitudes of vitamins and be healthy.

I've had patients who have brought in very large suitcases filled with supplements of all kinds. Unfortunately, these have been some of my

sickest patients. That's because they continued to eat whatever they pleased, foolishly believing that supplements alone could make up for whatever their diet was lacking.

How wrong they were! Some were literally spending thousands of dollars every month and getting sicker by the day.

Most chronic diseases, such as heart disease, diabetes, arthritis, and cancer, are usually associated with nutritional deficiencies. However, dieting and eating too much sugar, fats, processed foods, fast foods, and other devitalized and inflammatory foods are literally draining the life out of us as they constipate our bodies, make our tissues acidic, introduce toxins, inflame our tissues, drain us of our nutrient reserves, and accelerate degeneration. Americans have been duped into believing that we can continue to eat whatever we want and that simply taking a vitamin or a multitude of vitamins can neutralize or protect ourselves from whatever we have eaten.

## **Undernourishment and Disease**

When treating those with degenerative diseases, I began to notice a pattern. Most of these individuals weren't underfed. In fact, most of them were big overeaters. They ate plenty—but they ate all the wrong things. They were overfed and yet completely undernourished.

This was particularly true of people with obesity, cardiovascular diseases, arthritis, type 2 diabetes, hypertension, a host of different allergic conditions, psoriasis, rheumatoid arthritis, and lupus. In fact, to some degree, it appeared to apply to nearly all degenerative diseases.

For many of these people, medications won't help. Nor can taking vitamins and nutrients eliminate the cause of these diseases. That's because it's not lack that causes many of these diseases—it's eating too much of the wrong foods.

I began to realize that one of the main causes of these degenerative diseases is overconsumption of sugary, fatty, starchy, and high-protein foods—foods that have been processed, fried, and further devitalized. These are inflammatory foods that actually invite disease into our bodies. These people were taking in enormous amounts of empty, fattening calories, but they were not nourishing their bodies but inflaming them.

Taking some supplements such as a comprehensive multivitamin with minerals, omega-3 fats, and vitamin D3 is important. However, much more important are eliminating (or significantly reducing) consumption of the toxic fats, sugars, processed “dead” inflammatory foods, and eating more fruits, vegetables, whole grains, nuts, seeds, and other “living” foods.

Taking in dead, man-made, processed food creates a trap. When your body realizes that it hasn’t received the nourishment it craves, even after you’ve eaten a large, calorie-laden meal, your brain sends a signal that it still needs nourishment. But when you answer that craving with more dead food, you start a cycle that leaves your body laboring under a devastating burden of too much sugar, starch, and fat, leading to chronic inflammation and degenerative disease.

This kind of burden creates enormous stress for your entire digestive tract. It overtaxes the liver and overwhelms your entire body with massive amounts of dangerous fats, chemicals, and other toxins.

All the while, in a sense, you are starving. You are becoming depleted of what you really need: essential vitamins, minerals, antioxidants, phytonutrients, and enzymes. Eating in this way will make you feel fatigued and irritable, and over time you’ll begin to develop one or more of the degenerative diseases listed above.

Overnutrition is worse than undernutrition. In fact, animal studies have shown that getting too few calories, which is technically called *calorie restriction*, can actually increase longevity.<sup>4</sup> Although I do recommend calorie restriction for some diseases, such as type 2 diabetes and obesity, I believe that as a nation we need to work harder at eating in a way that keeps us within a healthy weight range.

## **Why Conventional Medicine Can’t Help**

Conventional medicine with its prescriptions many times cannot help. Thomas A. Edison said, “The doctor of the future will give no medicine, but will interest his patients in the care of the human frame, in diet and in the cause and prevention of disease.”<sup>5</sup> What we need is better prevention.

## **Stop and Think About How We Eat**

Our prosperity as a nation has come at a price. After years of overeating and overindulgence, we are experiencing an epidemic of degenerative and inflammatory diseases.

Most of us eat a standard American diet. That means lots of fat, sugar, and highly refined wheat and corn products, including white bread, crackers, bagels, pasta, and cereals. Add other processed food, such as potato chips, corn chips, and white rice. Don't forget the fatty meats such as T-bone steaks, ribs, bacon, pork chops, and processed meats including salami, ham, pepperoni, and roast beef usually loaded with salt, fat, nitrites, and nitrates. Now, top it all off with a large amount of saturated fat, hydrogenated fat, and processed highly inflammatory vegetable oil, such as most commercial salad dressings, most commercial cooking oils, and mayonnaise. They are typically high in inflammatory processed omega-6 oils. It's no wonder we have an epidemic of heart disease, cancer, diabetes, and arthritis as well as many other degenerative diseases.

Now for dessert. What could be more American than apple pie? Nevertheless, the absolute worst foods—and all-time American favorites—contain tons of sugar and hydrogenated fat. These include many baked goods, such as cupcakes, cookies, pies, Danishes, fudge, and brownies—and don't forget the doughnuts and candy bars.

We didn't always eat this way. Former generations were some of the healthiest on the planet. As an agrarian culture, many of our grandparents lived much closer to the land. But today, our lifestyle is much too stressed and fast-paced, and as a result our diet suffers.

## **Stressed Out?**

Most of us are nearly drowning in stress. We live on the run, tossing down dinner from a “drive-thru” on our way to meetings or our children's activities. On other days, we wash ashore at the end of the day with barely enough strength to make TV dinners. Or worse yet, we fill up on chips or whatever else we can find on the run.

We wear ourselves out working longer hours, and we enjoy our lives less and less. We exercise very little, if at all, and we keep up our hectic pace through stimulants such as coffee, tea, sodas, and chocolate. We stress our bodies even more by purchasing more “things,” bigger houses,

and new cars, which means longer work hours to pay for our cravings. Our list of commitments grows while our endurance runs out.

Stressed-out America is on a path to degenerative disease and premature death. Many of us are dying in middle age. But it doesn't have to be this way. We can choose to relax, slow down, smell the roses, and choose a healthy diet.

## **Change the Way You Think**

Most of us have grown up eating the American diet and feeling pretty good about it. But to live healthier, longer lives, we must rethink what we've been taught about food—before it's too late.

How do we change our thinking? We can start by changing the *why* of eating. Just why do you eat? Do you eat because something tastes good and your flesh is craving it? Or do you eat because you are providing your body with fuel to run? For most Americans, eating has become more of a recreation than a daily necessity based upon nutritional wisdom.

Now, I'm not trying to suggest that eating shouldn't be enjoyed. God created all things for us to enjoy, and eating was one of those things. But when our dietary choices, which were designed to nourish and sustain our bodies, actually begin to make us ill, then we must change the way we think.

Hippocrates, the father of medicine, said, "Our food should be our medicine and our medicine should be our food." In other words, what we eat should be so good for us that it actually heals and restores our bodies. What a difference from the average American mind-set about eating!

Start thinking about more than just taste and pleasure when you eat. Begin to eat for your health's sake!

So, here's your new set of priorities: health first, taste and pleasure second. I guarantee that once you begin to satisfy *the true* need of your body—the need for genuine nourishment—you'll begin to enjoy your food much more.

## **Health-First Eating**

A health-first eating lifestyle begins by eliminating or drastically reducing how much fried food, processed foods, processed vegetable fats, saturated

fats, hydrogenated and partially hydrogenated fats, and sugar you take in. It also means avoiding fatty cuts of meats and selecting smaller portions of the leanest meats. These include free-range chicken or turkey breast and free-range beef such as extra-lean ground round, tenderloin, and filet.

## **Five Alive**

Eat three to five servings (no fewer than three) of living, organic vegetables and two to four servings of fruit every day. That means fruits and vegetables should make up a large percentage of your diet. This is the recommendation of the United States Department of Agriculture, and mine also.

I did my internship and residency training at Florida Hospital, which is run by the Seventh-Day Adventist church. The Seventh-Day Adventists avoid alcohol, tobacco, caffeine, and pork. They are also taught to refrain from eating eggs, meats, and even fish. Many are strict vegetarians. While I was there as a resident, the cafeteria served vegetarian foods only. Adventists who are vegetarians live about thirteen years longer than the average nonsmoking American.<sup>6</sup>

One such Seventh-Day Adventist was the physician Dr. John Harvey Kellogg. He was a vegetarian who, together with his brother, built a factory in Battle Creek, Michigan, to produce various health foods, including whole-grain cereals. That's where your box of Special K comes from. However, Dr. Kellogg didn't process his cereals as the majority of them are processed today to extend shelf life. Dr. Kellogg believed that 90 percent of all diseases were caused by improperly functioning colons.<sup>7</sup>

One of Dr. Kellogg's patients, C. W. Post, was also an employee. He later developed Post Cereals.<sup>8</sup>

## **Limit Meats**

The Bible does not recommend vegetarianism, so neither do I. Adam and Eve were vegetarians in the Garden of Eden, and some prophets, such as John the Baptist, Samson, and others who had taken Nazirite vows, were vegetarians. Still, Jesus Christ was not.

Nevertheless, most Americans eat far too much meat—and over 95 percent of our exposure to dioxins comes from eating commercial animal

fats.<sup>9</sup> The health risks of dioxins include cancer, reproductive and developmental disorders, and mild liver damage. When eating beef, I recommend those which are organic grass-fed rather than grain-fed, as grass-fed beef contains three to five times more conjugated linoleic acid, a beneficial fat, and more healthy omega-3 fats and significantly less saturated fat and omega-6 fat than grain-fed beef. However, practice moderation and only consume at most 18 ounces of red meat a week.

I recommend that women eat only 2 to 3 ½ ounces of lean, free-range meat, preferably only once daily, or at the most twice daily. Men, limit meats to only 3 ½ to 6 ½ ounces of lean, free-range meat, only one or, at the most, two times a day. I also recommend rotating your foods and eating different protein sources, starches, fruits and veggies daily and rotating every four days. For example, for meat, turkey one day; chicken the next; fish the next; and red meat the next. Then rotate back to turkey. You do the same for starches, veggies, and fruits. If you eat meat twice a day, then eat the same meat for lunch and dinner. Patients who practice this are usually much healthier and have fewer food allergies and sensitivities.

It's important to be careful when consuming fish. Most fish stocks around the world are contaminated with heavy metals, particularly mercury, which can be very dangerous to your body. Health problems linked to metal toxicity include:

- Cancer
- Neurological disorders, including Alzheimer's disease
- Fatigue and fuzzy thinking
- Decreased production of red and white blood cells
- Abnormal heart rhythm
- Damage to blood vessels<sup>10</sup>

Keep in mind the general rule that the larger the fish, the higher its mercury level and toxic potential. Also, I highly recommend the consumption of wild Alaskan salmon—or, to be safe, the regular intake of a high-quality fish oil—rather than farm-raised fish, as farm-raised fish usually contain antibiotics, hormones, PCBs, and other chemicals.

## **[Avoid High-Protein Diets](#)**

More and more people are going on high-protein diets such as the Atkin's Diet. Yes, they are losing weight. But the long-term effects of this diet can be very dangerous and may lead to many degenerative diseases.

If you are on this diet, limit your protein portions to 6 ½ ounces or less for men and 3 ½ ounces or less for women once or twice a day. For more information on this subject, refer to my book *What You Don't Know May Be Killing You* (Siloam, 2004).

## **In Conclusion**

If you see yourself in this chapter, be encouraged. Even if you've spent a lifetime digging your own grave with your fork and knife, it's never too late to change. You will make many choices about your destiny by what you choose to eat. Choose now to reap health, happiness, and a long life. You hold the key to your own future health.

Let's turn now and look at what I believe is the single most effective answer to overnourishment—fasting! More than anything else, fasting is a dynamic key to cleansing your body from a lifetime collection of toxins, reversing inflammation and overnourishment and the diseases they bring, and ensuring a wonderful future of renewed energy, vitality, longevity, and blessed health.

SECTION II  
DR. COLBERT'S  
DETOXIFICATION PROGRAM

## Chapter 4

# **TOXIC RELIEF THROUGH FASTING**

DAVID, \* A MAN WHO HAD WORKED FOR MANY YEARS AS AN ENVIRONMENTAL engineer, seemed frightened and agitated as he walked into my office. His skin was pallid and deathly gray. His eyes seemed lifeless, and his demeanor was halting and somewhat confused.

He sat down and crossed his arms in disgust after he threw some paperwork on my desk. Visibly shaken, he declared loudly, “My body is more polluted than a toxic waste dump!” He pointed to the shocking results of the hair analysis for heavy metals he had brought with him. “I guess I’m just a walking toxic waste dump. According to these numbers, if my body was a piece of earth, it would be too toxic for my neighbors to live next to!”

The figures didn’t lie. If a piece of land contained the toxins that this man’s body contained, the government would probably have declared it a toxic waste site. How frightening!

This polluted planet is having a devastating impact upon us. If, like David, we’ve gotten to the place where our good health and mental acuity are already compromised, then we’ve almost gone too far.

David’s eyes filled with fear as he pleaded, “I don’t know what to do. I feel awful. I’m tired all the time. I can hardly remember the normal daily details of my life. I expect I’ll die of cancer or something worse if this can’t be turned around. Can you help me, Doc?”

Although my heart really went out to him, I knew that what David needed was not sympathy. Pure and simple, David needed toxic relief.

What about you? Your body may not be as toxic as David’s, but it’s still probably a lot more toxic than you might imagine. The good news is that toxic relief is available!

## **What’s Your Body Trying to Tell You?**

For starters, ask yourself this question: Are you listening to your body? Do you understand what it’s trying to tell you?

Sickness and degenerative disease are usually simply nature's way of telling you that your body is toxic and needs to be cleansed. If you were driving your car and the red engine light came on indicating that it was time to check the engine, would you continue to drive the car without taking it to the shop to have it checked? This actually happened to a patient. She ended up having to replace her engine because she ignored the red engine light.

You may laugh, as her family members did when she told the story. However, this is exactly what many of us are doing. Our red engine light is flashing through the symptoms and signs of degenerative diseases that we are experiencing—diabetes, heart disease, arthritis, headaches, allergies, psoriasis, rheumatoid arthritis, lupus, and other degenerative diseases.

Too often we simply ignore the signs and symptoms and continue eating the wrong foods. We also keep living our stressed-out, unhealthy lifestyles including cigarette smoking, drinking alcohol, and not exercising.

Our bodies simply weren't designed to handle it all. Nevertheless, we continue to push and stress our bodies with these toxic burdens until they eventually develop diseases. At that point, we then run to the doctor and get medication, which further strains the liver's ability to detoxify and does nothing to cleanse it.

If this sounds like you, chances are you are simply toxic and probably overfed. As I mentioned earlier, simply beefing up your intake of supplements usually won't help. So what can you do?

## **Finding Relief Through Fasting**

The answer is fasting. Fasting is a powerful, natural way to cleanse your body from the burden of excess toxins, such as toxic fats, and from many other chemicals and toxins that cause degenerative diseases.

Fasting is the safest and best way to heal the body from degenerative diseases caused by being overfed with the wrong nutrition.

The ancient father of medicine, Hippocrates, said, "Every thing in excess is opposed by nature." Many years as a practicing medical doctor have convinced me that he was right. Our nation is suffering an epidemic of degenerative diseases and death that is caused by excess—plain and simple. We have eaten too much sugar, too much fat, too many empty calories, and far too much processed, devitalized food.

## **Periodic Fasting**

Finding toxic relief through fasting can turn your life and health around. It is a natural, biblical system of supporting and cleansing the body from built-up chemicals, fats, and other toxins. It also has amazing spiritual benefits, as we will see later on.

Periodic fasting, followed by a cleansing diet, will allow you to live free of the physical and neurological burden of toxins. Fasting gives your toxic, overtaxed body an opportunity to “catch up” with its overwhelming task of waste removal.

### **Fasting—a Natural Principle of Healing**

Fasting allows your body to heal by giving it a rest. All living things need to rest, including you. Even the land must rest, which was a principle God gave to the ancient agrarian Jewish nation regarding their fields. Every seventh year they were not permitted to grow any crops at all. They had to let the land lie fallow so that it could reestablish its own mineral and nutrient content. (See Leviticus 25:1–7.)

Today, we live in a time in which farmers have completely forgotten this age-old principle. This is one of the factors involved in our being overfed and undernourished. It's because much of our soil is depleted that our food sources have also become partially depleted of the minerals, vitamins, and other nutrients that our bodies crave. When we eat and don't get the nutrition we need from our food, we will usually eat more, trying to fill the body's craving for nourishment. Before long, we have become obese, overfed, and undernourished.

Every winter many animals will hibernate or rest for a season. Every night when you sleep, you give rest to your body and mind. Blessed rest is as much a law of the universe as gravity. It's also a powerful principle of healing.

Think about it: When an animal is injured or sick, what does it do? It finds a resting place where it can lap up water, and it quits eating while it heals. This is natural, instinctual wisdom that God placed within the animal kingdom.

But when our bodies get sick, what do we do?

When we get sick with an injury or illness, such as pneumonia, a sinus infection, or strep throat, instead of resting and fasting by drinking water or juices only, we eat ice cream, puddings, creamy soups, and other rich, high-caloric foods that do nothing to cleanse and detoxify the body.

We also prolong our illnesses by taking Tylenol to suppress the fever so that we can go back to work far sooner than our bodies are ready. We push ourselves by taking antibiotics, decongestants, and antihistamines to dry up the mucus. This also impedes the natural process of detoxification. Instead of healing, our bodies may store even more toxic material.

Now I do recommend antibiotics for infectious diseases when they are warranted. Such times include for bacterial infections such as pneumonia, acute bronchitis, urinary tract infections, strep tonsillitis, and many other bacterial infections. However, too many doctors prescribe antibiotics for viral infections, allergic symptoms, or when a patient requests them. Sometimes they are given because a doctor is unable to figure out what is going on or what is causing the fever.

Hippocrates' saying "Let your medicine be your food and let your food be your medicine" applies here as well. In other words, let what you take into your body provide healing. Rest the body. Drink plenty of fluids. Drink fresh juices that allow the body to heal. Don't you think humans should have as much sense as the animals?

Hippocrates practiced around 400 b.c. and commonly used medicinal foods such as apples, barley, and dates to treat his patients. Aristotle, Plato, Socrates, Galen, and Paracelsus all believed in fasting and practiced this therapy. They used fasting, juices, soups, nutrition, and rest to bring their patients back to health. Hippocrates treated the patient and not the disease.

## **General Benefits to Fasting**

Fasting gives a rest to the digestive tract. Your body uses a significant amount of your energy every day in digesting, absorbing, and assimilating your food. Since fresh juices are very easy for the body to assimilate, they give your digestive tract a chance to rest and repair. This, in turn, gives your overburdened liver a chance to catch up on its work of detoxification.

Juice fasting, as we will see later, also creates an alkaline environment for your body's cells and tissues so that they can start releasing waste

products through your body's various channels of elimination. The primary elimination channels of the body include the kidneys and urinary tract, the colon, the lungs, and the skin. Fasting allows your liver to catch up on its internal cleansing and detoxification. At the same time, the digestive organs, including the stomach, pancreas, intestines, and gallbladder, get a much-deserved rest.

Even the blood and the lymphatic system can be effectively cleansed of toxic buildup through fasting. During fasting, our cells, tissues, and organs can begin to dump out accumulated waste products of cellular metabolism as well as chemicals and other toxins. This helps your cells to heal, repair, and be strengthened.

You have about sixty trillion to one hundred trillion cells in your body, and each one takes in nutrients and produces waste products. Fasting allows each cell to dump its waste products and thus be able to function at peak efficiency.

Fatty tissues release chemicals and toxins during fasting. These, in turn, are broken down by the liver and excreted by the kidneys. Your body will excrete toxins in many different ways during a fast. Some people actually develop boils, rashes, or body odor during fasting since toxins are being released through the body's largest excretory organ, the skin.

## **Fasting Energizes Cells**

Fasting is also an energy booster. The toxic buildup in the cells and oxidative stress compromise the mitochondria (the energy factories in each cell) so they cannot effectively produce energy. This leads to fatigue, irritability, and lethargy. Let me explain. Mitochondria are similar to tiny energy factories within each of your cells where energy is produced. Metabolic waste, chemicals, other toxins, and oxidative free radicals affect the function of the mitochondria of the cell, making them less efficient in producing energy.

## **Rejuvenate Physically, Mentally, and Spiritually**

Periodic, short-term fasting will also strengthen your immune system and help you live longer.

Deep cleansing of every cell in your body through fasting has the wonderful added benefit of improving your appearance. As your body detoxifies, your skin will eventually become clearer and glow with a radiance that you probably haven't seen for quite a few years. The whites of your eyes usually become clearer and whiter and may even sparkle.

As toxic fat melts away through fasting, you'll feel and look better than you have in years. Your energy will be supercharged. And your mental functioning usually improves as your body cleanses, repairs, and rejuvenates.

Fasting cleanses and rejuvenates the body physically, mentally, and spiritually. It is also one of the best ways of preventing and treating sickness and disease, as we will see later.

## **A Cellular Garbage Dump?**

Have you ever driven by a garbage dump in the middle of the summer? It isn't a pleasant experience. So, don't let your body become a cellular garbage dump filled with toxins that eventually lead to degenerative diseases. Instead, cleanse your body periodically with fasting to both prevent or to treat degenerative diseases.

You may be thinking, "Fasting is something that I just cannot do! Fasting is for far more disciplined people than me. It's impossible for me to fast."

If you've responded this way, you probably see fasting as a feat of unflinching self-denial and otherworldly determination for which only a few are cut out. Certainly not yourself! However, that's simply not true. Although some fasting is little more than a rigorous test of self-endurance, that's not at all the kind of fasting I'm suggesting here.

The detox fast that I will be outlining in the following chapters is not a grueling feat of self-denial. If you carefully follow the steps that I will outline, you will not find fasting difficult at all.

So, let's take a look at the first step, which is the preparation.

## **Let's Talk About Fasting**

Fasting in general is very controversial. Many methods of fasting exist, as well as many attitudes about fasting. As a doctor, I've been able to look

closely at the various popular methods of fasting. Some of them are good, while others can be downright dangerous. So, before you decide to begin fasting, let's investigate fasting and look carefully at the method of fasting that I'm convinced will put you on a path to healthier living.

## **Fasting—What's It All About?**

Despite the fact that many believe that the only true method of fasting is the total fast—not eating or drinking anything—I consider this method to be unsafe. Let's look.

### **Total fasting**

Fasting is often thought of as taking nothing by mouth. Technically speaking, this is true fasting. But it's not the type of fasting I'm suggesting here for detoxification.

I never recommend total fasting. Your body must always have at least two quarts of water a day to sustain your life, for you can only live for a few days without water.

The kind of fasting that most of us are familiar with is avoiding all solid food and consuming liquids only.

### **Water-only fasting**

The strictest, most severe fast is a water-only fast. In general, I usually don't recommend this type of fasting. But for certain autoimmune diseases such as lupus and rheumatoid arthritis or for severe atherosclerosis such as severe coronary artery disease, the benefits of water-only fasting are powerful. Nevertheless, you can also experience similar benefits for these diseases with juice fasting—it just takes longer.

If you are considering water-only fasting, be prepared to completely devote several days to doing little more than fasting. For most individuals, water-only fasting so weakens the body that working a full-time job while fasting is not possible.

If you do not have one of these diseases, I believe that the best fasting method for cleansing and detoxification is juice fasting. Juice fasting provides most of the benefits of water-only fasting without the unpleasant weakness and hunger that often accompany a water-only fast.

### **Juice fasting**

The fasting method I recommend for complete detoxification is juice fasting. For this type of fast, you will need lots of fresh fruits, vegetables, and a juicer.

Some feel that juice fasting is not really fasting in the truest sense of the word. Others doubt that it has the same benefits of water fasting. And while water-only fasting does have some truly restorative healthful effects, juice fasting can be even more beneficial, and it is far less strenuous, since it supports detoxification, alkalinizes the body, and supports the liver. One usually doesn't experience the weakness or hunger of water fasting and usually experiences tremendous energy during the fast.

As I mentioned, water-only fasting can reduce inflammation in the body. In addition, it may actually cause the hardened arterial plaque of severe coronary disease to regress. Juice fasting can produce a similar effect, but over an extended period of time.

In addition, raw, freshly squeezed juices supply generous amounts of vitamins, minerals, antioxidants, enzymes, and phytonutrients that help your body to restore itself and heal.

Let's take a look at some of the special benefits of juice fasting.

## **Restoring Nature's Delicate Balance**

Few people ever consider that the health of their bodies is based partially upon a delicate natural acid and alkaline balance. Nevertheless, this balance is essential to your body's ability to detoxify successfully. When all your body gets is the standard American diet, your tissues become more acidic than nature intended—upsetting this delicate balance.

If you'd like to know how acidic your body is, you can find out very easily by simply purchasing some pH strips at the drugstore. Collect the first morning urine and dip a pH paper into it. It will indicate your urine's pH level with a change of color. The urinary pH usually indicates the pH of the tissues. The change of color can then be matched to a numerical reading. A card is included in the pH paper that correlates a color to a pH number.

Most people will have a pH test reading of about 5.0 to 6.0, which means their bodies are very acidic. It should be between 7.0 and 7.5. Close

enough doesn't count. Even though five is only two points less than seven, a pH of 5.0 is actually a hundred times more acidic than a pH of 7.0.

## **Cellular Constipation?**

What happens when your body is too acidic? Precious minerals including calcium, potassium, and magnesium are lost in the urine, and cells become less permeable, which means they are unable to excrete waste products effectively. In a sense, your cells become constipated, or each one of them may become full of waste that it cannot get rid of.

When this occurs, the mitochondria or energy-producing structures in the cell do not function properly, and you usually feel fatigued. Your cells become toxic. Now, free-radical activity increases, and the toxic overload continues to build until eventually your body begins to deteriorate and degenerative diseases occur.

Juice fasting brings back the natural balance. It alkalizes the tissues and raises the pH. Now the cells can begin to excrete toxins again. Detoxification has begun.

## **Giving Your Gut a Rest**

An occasional juice fast—every one, three, or six months—gives your gastrointestinal system a much-needed rest.

Juices are easy on the digestive system. They are easily absorbed into the body without requiring much work from your stomach and intestines. Water fasts also give the digestive system a rest.

## **Juice Fasting vs. Water-Only Fasting**

Fasting is not new. As a matter of fact, it's been around since before Moses. Many people go on water-only fasts and believe that this is the only true way to fast. However, this program of juice fasting will usually provide you with more benefits than water fasting, but without many of the drawbacks. Let's take a look.

### **Muscle loss**

The right kind of juice fast will continue to nourish your body. You won't experience the kind of muscle loss that can happen during a

wateronly fast. If you're a fan of the television series *Survivor*, you've watched the participants wither away every week, losing large quantities of muscle mass. In essence, except for a few spoons of rice each day, they usually are on a water-only fast. Periodic juice fasting provides the body with so much nutrition that such muscle loss would be minimal.

In addition, prepared correctly, juice can provide the nutrients, amino acids, and fuel that your liver requires to detoxify. This is an extremely important aspect of detoxification that we will examine in-depth later on.

### [Antioxidants](#)

That's not all! Juice fasting has even more cleansing benefits. Correctly prepared, juice can supply a vast array of antioxidants—which you will need to protect your liver from the enormous amounts of free radicals that are released during fasting. Water-only fasts decrease the stores of antioxidants, increasing your risk for oxidative damage from free radicals to tissues and organs throughout your body.

Water fasting, and even long-term juice fasting, depletes your body of glutathione. That may not seem that important, but it really is. Glutathione is the most important and the most abundant antioxidant in the body. It protects us from free-radical activity and regenerates itself as well as vitamins C, E, and other antioxidants. An overworked liver is a hotbed of free-radical activity, and adequate levels of glutathione are essential or the liver can not detoxify heavy metals, chemicals, pesticides and some medications and can be damaged by free radicals.

To cleanse your body effectively, I believe it is much healthier to go on a series of short juice fasts rather than one long fast. This allows your body time to recuperate and rebuild its stores of antioxidants as well as glutathione. I also recommend taking a glutathione-boosting supplement while fasting. (See [Appendix D](#).)

### [Healing](#)

Fasting with the right kinds of raw, fresh juices increases the healing benefits of fasting.

Specially prepared juices are packed full of nutrients, phytonutrients, and enzymes. These can supply the raw materials your body needs to repair your cells, heal your organs, and protect your tissues from free radicals.

## [Juice Fasting and Weight Loss](#)

This sensible, medically sound method of fasting can very quickly allow you to shed any extra toxic fat that your body may be carrying—even if you're significantly overweight. In addition, you can avoid a water-only fasting trap of which many people are not even aware. What's the trap? Water-only fasting usually suppresses the metabolic rate, significantly causing you *to gain* significant amounts of weight after the fast!

That's one of the reasons that fasting with a program of specially prepared juices is so much more sensible. Not only that, but it's also much easier to stay on a specially prepared juice fast because you're less likely to have severe food cravings compared to a water-only fast.

### [No metabolically induced weight gain](#)

The reason for this is because fasting with specially prepared juices usually does not throw your body into a state of muscle catabolism, which is excessive muscle breakdown.

During a water-only fast, the body goes into this state and eventually burns muscle tissue as fuel. After about two to three days of burning muscle, which is converted to glucose, as fuel, the body shifts to burning ketones from the breakdown of fat as fuel. Thus after a few days of water fasting, the body begins breaking down more fat and less muscle. Ketosis develops, and the body can become more acidic.

The metabolic rate also slows down. This metabolic slowdown can actually cause you to gain weight after the water fast when you begin to eat again.

Let me explain. When you go on a water-only fast, mechanisms in your brain signal your body that you are starving even if you are not. Therefore, your body goes into a survival state to try and hold on to all of the calories it gets. In this state, you can actually eat nothing and lose only a small amount of weight.

However, your body doesn't immediately move back out of that state when you start eating again. It may take months for the metabolic rate to recover. Thus when you go back to eating a normal diet, you will usually gain weight rapidly and will often gain more weight. When you do another fast, the metabolic rate may have never fully recovered, and therefore you may continue to gain more weight after the fast is broken.

This should not happen to you on my specially prepared juice fast. Fasting with the juice program that I have provided in this book will provide your body with enough calories and nutrition so that you should be able to bypass this experience altogether.

The final effect for you will be—weight loss! Not only will this special fasting method free your body of disease-causing chemicals, but it will also free it of toxic fat. If you are overweight, and even significantly obese, one of the truly wonderful and healthful benefits of this fasting method is that it can help bring your body back to the normal, healthy size that God intended. A regular, sensible fasting program can slim you down very quickly, and you will also experience the more important benefit of eliminating the fatty areas in your body, especially toxic belly fat where dangerous toxins and chemicals are usually stored. As these toxic fat depots are mobilized, toxins in the fat will be released and toxins will be detoxified and flushed more readily from your body.

Not only will you live longer through this juice detoxification plan, but you will feel better and look better also!

### **Stay energized**

Many fasting programs are so physically challenging that you can be left feeling completely wiped out with little or no energy to function. This juice-fasting program is designed to keep you energized enough to work, play, and enjoy your daily activities.

As a matter of fact, since juice fasting will increase both the detoxification capabilities of the body and increase the elimination of toxins, you may actually experience more energy during this fast, not less.

### **Liver friendly**

Water-only fasting can place considerable additional strain upon an already overworked liver. And since your liver is the primary detoxification organ, you need to do all that you can to support its vital function in your body.

Juice fasting does this, while on the other hand, water fasting usually places more strain on the liver and usually further depletes the liver of glutathione, the most important detoxifier and the most important antioxidant. That's one of the reasons for the overwhelming sense of fatigue you can experience during a water-only fast.

During a water-only fast, a flood of toxins is released from fat and other cells and tissues so quickly that the liver can become overwhelmed trying to keep up the process of detoxification. Such a burden is placed upon the liver at this point that it usually requires more glutathione, vitamins, minerals, amino acids, and antioxidants. Juice fasting supplies the vitamins, minerals, amino acids, and antioxidants, but water fasting does not. In addition, a shower of free radicals is created in this flood of released toxins, creating a hotbed of free-radical activity in the liver and possibly injuring the liver.

## [Keeping the Colon in the Game](#)

One of my main concerns about water-only fasting is that it knocks out a major player in the detoxification game—the colon. When you fast with water only, your colon usually shuts down. In a less toxic world, this probably wouldn't matter so much. But with the toxic load with which our bodies are dealing, we don't want this vital detox player sitting on the bench.

One extremely important reason for keeping this vital player in the detox game is DDT, as well as other pesticides.

As mentioned earlier, most of us have DDT or DDE (the toxic metabolite of DDT) in our fatty tissues. During a water-only fast in which the colon rests, DDT as well as other pesticides and solvents are released from the fatty tissues into the bloodstream at an extremely rapid rate. This, in turn, can overwhelm the liver so that it cannot detoxify the chemical effectively. If this happens, DDT and other pesticides and solvents can end up in other fatty tissue in the body, including the brain, spinal cord, and peripheral nerves.

That's why it's absolutely essential to keep this powerful detox player in the game. Even while you're on this program of juice fasting, consider drinking herbal teas to keep the colon functioning. If you become constipated, be prepared to use an herbal tea or a mild enema. I recommend a Vitamix blender, which maintains the fiber in the juice. The soluble fiber binds toxins and hormones and aids in excreting them out of the body, whereas water-only fasting includes no fiber. We'll discuss more about this later.

## **In Conclusion**

Controversy will always remain between water-fasting and juice-fasting methods. That's why it's important to consider carefully both methods and determine which one will be most effective for you.

Now let's look at juice fasting and the promise it holds for your renewed health and vitality.

\* Fictionalized character created from a composite of accounts

## Chapter 5

# THE JOY OF JUICE

RECENTLY WHILE TRAVELING IN ANOTHER CITY, MY WIFE, MARY, was standing at a Clinique counter at a department store and struck up a friendly conversation with a couple next to her in line. The middleaged man shared that six months previous he had undergone a monthlong juice fast. Interestingly, he hadn't fasted at the advice of a medical person or because he had read about it. He simply felt the need to go on a juice fast.

A few minutes into the discussion the man's wife began painting a picture of the physical changes that took place in her husband's body as he detoxified. In three or four days of fasting, his skin began to give off a foul odor and emit a dark ashy substance as the toxins deep within his body were visibly released. His amazing symptoms lasted only for a few days.

He continued sharing his story with Mary. By the end of the month of fasting, he felt better than he had for years. He couldn't remember when he had more energy. He felt truly invigorated, renewed, and cleansed—down to the very core of his being.

“That was just six months ago,” he said. “But I want to go on another juice fast again just to feel that good again.” He was eager to experience the sense of rejuvenation once more. \*

## Your Juice-Fasting Program

I find it uniquely interesting that this man simply felt the need to go on this fast. Apparently his body was extremely toxic. He may have worked in a toxic environment. Who knows? His inclination to go on an extended juice fast may have spared him from cancer or heart disease several years later. It's impossible to say. But some inner wisdom told him he needed to cleanse his body. I'm glad he listened.

Toxic substances, as we learned earlier, are everywhere. They are in the water that we drink, the air that we breathe, and the food that we eat. They attack us from outside and from within.

We are living in the most toxic time the world has ever known. Our ability to stay healthy is increasingly determined by our body's ability to

detoxify.

The best way to eliminate these toxins from our bodies is to start a detoxification program. Here's how:

- Start by following the liver cleansing diet for two to four weeks.
- Take supplements for a healthy liver.
- Drink at least two quarts of alkaline water a day.
- Get plenty of fiber.
- Undergo periodic juice fasting for three to seven days at a time (or longer if monitored by a physician).
- Finish up with another two weeks on the liver cleansing diet.

By following this simple program, you can safely and effectively eliminate the dangerous toxins from your body.

## [Cellular Spring Cleaning](#)

Periodic fasting is like periodic house cleaning. You may have a regular routine of house cleaning that includes dusting, vacuuming, mopping floors, cleaning bathrooms, and a host of other chores. But once or twice a year, many people go after the hidden dirt and grime. They wash curtains, pull furniture away from the walls, wash windows, scrub out cabinets, and don't miss a nook or cranny until everything shines.

Our bodies aren't much different. They need regular, thorough cleanings to function at peak efficiency.

The longer we live on this toxic earth, the more we absorb and collect toxins in our tissues. These toxins are actually stored in the tissues of our bodies, especially in the fatty tissues. The liver also stores some toxins that it cannot break down and excrete. Believe it or not, the metabolite of DDT, called DDE, is present in most people's fat.

Fasting is an effective way to help your body eliminate these toxins.

## [The Wonders of Juice](#)

The USDA, the Surgeon General, the National Cancer Institute, as well as the US Department of Health and Human Services, all recommend that we

eat plenty of fruits and vegetables.

The minimum amount of fruits and vegetables recommended a day is five—three vegetables and two fruits. Less than one-third of Americans get the minimum of five servings a day. Because we eat so little fruit and vegetables, many Americans suffer from nutritional deficiencies, including vitamin and mineral deficiencies. Common deficiencies include folic acid deficiencies in both men and women. In fact, 60 percent of older Americans do not get enough folic acid to prevent elevated homocysteine levels, which is a risk factor for heart disease.<sup>1</sup>

To make matters worse, the most common vegetables that Americans eat are potatoes in the form of french fries, onions in the form of fried onion rings, and tomatoes in the form of ketchup. Even our fresh vegetables are losing their vitamin and mineral content. When we compare the USDA food tables from twenty-five to thirty years ago to the food tables of today, we will see that the nutrient value for over a dozen fruits and vegetables has dropped dramatically.

For example, nearly half the vitamin A and calcium in broccoli have disappeared. In other words, there is about a 50 percent drop in these nutrients in broccoli as compared to the USDA handbook twenty-five to thirty years ago.

## **Vital Vegetables**

Fruits and vegetables are power-packed with phytonutrients, antioxidants, vitamins, and minerals that prevent cancer, heart disease, strokes, osteoporosis, and most other degenerative diseases.

Do all you can to eat more fruits and vegetables. Since most of us don't have the time to eat the raw fruits and vegetables, it is much simpler to begin juicing fruits and vegetables on a daily basis.

By juicing fresh fruits and vegetables, the juices are separated from the fiber and are quickly digested, absorbed, and assimilated by the body. Juice every day to be sure you get plenty of fruits and vegetables. Eight ounces of carrot juice provide the carotenoids that are equal to approximately one and one-half pounds of carrots. It would take quite a bit of time to prepare and eat that many carrots every day.

Another excellent way to get adequate amounts of vegetables is through Green Superfood. (See Appendix D.) One scoop is approximately

equivalent to six servings of vegetables. I recommend this at least once a day in the morning.

When you get in the daily habit of juicing fruit and vegetables, you can be sure you're getting the recommended three to five servings of vegetables a day and two to four servings of fruit a day that you need. Not only will you learn to love starting your day with delicious fruit and vegetable juices, but also you will dramatically reduce your risk of heart disease, cancer, stroke, diabetes, osteoporosis, and macular degeneration.

Give your body the fuel that it craves most—fresh fruits and vegetables—in a form that is easily digested, absorbed, and assimilated. You can do this through freshly squeezed juices.

## **Enzyme Energy**

Fresh juices are full of enzymes. Enzymes are actually organic compounds or catalysts that increase the rate at which food is broken down and absorbed by the body. Fresh fruits and vegetables are extremely high in enzymes. These enzymes are destroyed during cooking and processing. Bottled and packaged juices are pasteurized, which destroys the enzymes. Fresh juice contains living digestive enzymes that are important in breaking down foods in the digestive tract. This preserves your own body's digestive enzymes. This, in turn, gives your digestive system a much-needed rest so that it can repair, recuperate, and be rejuvenated.

Eating fats, protein, and starch puts a lot of strain on the digestive tract. Recall eating a large T-bone steak and potato with butter or sour cream along with bread and a dessert. Did you get sleepy an hour or two later? That was because that large meal sat in your stomach for hours as the body expended tremendous energy to digest it.

Cooked, starchy foods such as mashed potatoes, breads, and pasta contain no enzymes. Therefore, they draw from the enzymes that are produced in the pancreas and deplete your energy.

However, when you drink freshly juiced fruits and vegetables that are teeming with live enzymes, valuable pancreatic enzymes are preserved, giving your pancreas a break.

Juicing pineapples even gives you extra enzyme energy. Pineapples contain the enzyme bromelain, which has been used for decades in treating

inflammatory problems such as arthritis, improving wound healing, aiding digestion, and numerous other clinical and therapeutic applications.

## **Phyto Power!**

But the most important nutrients in fresh fruits and juices are the phytonutrients. Phytonutrients are simply plant-derived nutrients that contain antioxidants. Here are some of the incredible things these mighty plant nutrients can do:

- Prevent and fight tumors and cancer
- Lower cholesterol
- Increase immune function
- Fight viruses
- Stimulate detoxification enzymes
- Block the production of cancer-causing compounds
- Protect the DNA from damage

Many of these phytonutrients are found in the pigments of the fruits and vegetables, such as the chlorophyll of green vegetables, the carotenes or carotenoids in orange fruits and vegetables, and the flavonoids in berries.

Approximately one out of two men and one out of three women in the United States will at some time develop cancer in his or her lifetime. Consuming cruciferous vegetables every day in the form of juices is one of the best ways to protect your body from cancer.

## **Selecting Your Vegetables and Fruit for Juicing**

To prepare your juice for fasting it's important to select the vegetables and fruit that will do you the most good. So let's take a brief look at the major categories of phytonutrients so we can make the healthiest selections.

### **Carotenoids**

First, let's look at the carotenoids. There are more than six hundred.

Carotenoids are the fat-soluble pigments you find in red, orange, yellow, and dark green fruits and vegetables. Carrots, watermelon, pink grapefruit, sweet potatoes, squash, tomatoes, spinach, kale, collard greens,

cantaloupe, and yams are bursting with carotenoids. Half of these healthy wonders have the added ability to convert into vitamin A in our livers.

For years, nutritionists taught that the most powerful carotenoid was beta-carotene, which is what you find in carrots. Today, we know that other carotenoids have even greater antioxidant and anticancer powers.

The great thing about carotenoids is you can never overdose on them. If you take more than your body needs, then the excess will simply not be converted into vitamin A. Instead, it will be stored in your body's fatty tissues and even organs.

Studies have shown that the more carotenoids you take in through your diet, the lower your risk of developing cancer. Wow! That's phyto power![2](#)

### ***Lycopene***

Lycopene is a carotenoid found in the red pigment of carrots, tomatoes, pink grapefruit, and watermelon. This is a powerful antioxidant that reduces the instance of certain cancers. A study following more than 47,000 individuals found that men who consume large amounts of tomato-based foods each week had significantly lower rates of prostate cancer.[3](#)

Lycopene is also protective against cancers of the GI tract, including the esophagus, stomach, colon, and rectum.

### ***Lutein***

Another very important carotenoid is lutein. This healing substance is found in most yellow fruits and vegetables, such as yellow squash and corn as well as spinach and collard greens.

Lutein protects the eyes from macular degeneration—a major cause of blindness in older individuals.

### ***Other carotenoids***

Most of us only know about beta-carotene. We feel that we're getting all we need in our daily vitamin pill. But hundreds of other carotenoids exist, including alpha and gamma carotene, astaxanthin, zeaxanthin, canthaxanthin, and cryptoxanthin. Astaxanthin has been known to protect against cataracts, macular degeneration, and blindness, as well as sunburn, reducing oxidative damage to DNA, inflammation, and reducing risk of cancers such as breast, colon, bladder, and mouth. Astaxanthin, which occurs naturally in certain algae, is the new super carotenoid. You can find it in most health food stores.

We've only begun to scratch the surface in our research about them. But by juicing lots of raw, fresh vegetables, such as carrots, sweet potatoes, collard greens, and spinach, we give our bodies a vast array of different carotenoids. Each one of these wholesome vegetables adds another layer of protection from cancer and other degenerative diseases.

### ***Carotenoids and smoking***

Even though carotenoids have enormous cancer-fighting properties for nonsmokers, they work just the opposite for smokers.

A large study completed a few years ago showed that supplementation with beta-carotene actually increased the instance of lung cancer in smokers. The National Cancer Institute has repeated this study with similar results.[4](#)

Because of these two startling studies, smokers are warned never to take beta-carotene as a supplement. Odd, isn't it? Supplements of betacarotene decrease the incidence of lung cancer in nonsmokers. I believe if the study had used a symphony of antioxidants such as lipoic acid, CoQ10, vitamins E and C, a glutathione-boosting supplement, grape seed extract, and pine bark in addition to the beta carotene, the results would have turned out quite different.

Every time a smoker puffs on a cigarette or cigar, he plants a seed for lung cancer. How true the Bible is when it warns that the seeds we sow are the plants we will reap. (See Galatians 6:7.) If you continue to smoke, you will eventually harvest disease—disease that is even fueled by beta-carotene.

I once heard a preacher say, "You can still smoke and go to heaven, but you'll just get there a lot sooner!" So, stop smoking and start juicing. Juicing is one of the best ways to break an addiction to cigarettes.

### **Cruciferous vegetables**

Cruciferous vegetables are cancer blasters. They include cabbage, brussels sprouts, cauliflower, broccoli, kale, collard greens, mustard greens, watercress, turnips, and radishes. These cancer fighters contain more phytonutrients with anticancer properties than any other family of vegetables.

The word *cruciferous* comes from the same word root as *crucifying*, which means "to place one on a cross." Oddly, the flowers of cruciferous

vegetables contain two components that appear similar to the shape of a cross.

The potent cancer-fighting phytonutrients in the cruciferous vegetables family include indoles, isothiocyanates, and sulforaphanes, which are sulfur-containing compounds. They also contain phenols, coumarins, dithiolthiones, and glucosinolates, as well as other phytonutrients that are yet to be discovered. Indoles, especially indole-3-carbinol, are potent cancer antagonists. Sulforaphanes stimulate liver detoxification enzymes. Isothiocyanates induce production of detoxification enzymes by the liver, and they prevent damage to the DNA. Studies have correlated a high intake of cruciferous vegetables, especially cabbage, with lower rates of cancers, especially cancers of the breast and colon.[5](#)

Broccoli sprouts have the highest concentration of these protective phytonutrients. Select young broccoli sprouts that are about three days old. They contain twenty to fifty times more of the potent phytonutrient sulforaphane than mature broccoli.

Juicing cruciferous vegetables on a regular basis can help your liver to detoxify from pesticides, chemicals, drugs, and other pollutants. However, if you juice excessive amounts of cruciferous vegetables or juice them every day long term, they can inhibit thyroid function to a degree. So moderation is the key, and if you do decide to juice cruciferous vegetables daily for months or years, I recommend that you periodically have a thyroid blood test (TSH).

Even the American Cancer Society recommends eating cruciferous vegetables regularly to decrease your risk of cancer.[6](#)

## **Flavonoids**

Flavonoids are another group of powerful phytonutrients. They are found in plant pigments, especially blackberries, blueberries, cherries, and grapes. More than four thousand different flavonoid compounds give fruits and vegetables their beautiful red, blue, and purple color. They are also found in vegetables such as broccoli, tomatoes, and peppers.

Isn't it interesting that God placed these beautiful colors in different fruits and vegetables that provide protection from most diseases? Our eyes are actually drawn to the beautiful colors—the brilliant oranges in carrots, the bright reds in tomatoes, the brilliant greens in spinach and other green foods, and the brilliant purples and reds in the berries. Really, a big bowl of fresh vegetables is a beautiful sight. Seeing these brilliant flavonoids

should entice us to eat them regularly. However, most of us choose dead, processed, man-made foods that are high in sugars, fats, and salt and are devoid of these protective phytonutrients.

### ***Flavonoids and younger-looking skin***

Flavonoids can keep your skin looking younger. This is because they play an enormous role in the formation and repair of collagen. Collagen is the major structural protein in the body, and it is also the most abundant protein found in your body. It actually holds the cells and tissues of your body together.

Collagen tends to degenerate with age and slowly collapse, which is why our skin begins to sag as we get older. However, the flavonoids found in berries, cherries, grapes, and a host of other fruits and vegetables help to maintain the integrity of your skin's collagen. Therefore, it helps to keep your skin's collagen from degenerating and collapsing with age.

By simply juicing berries and grapes every day, you can get enough flavonoids to nourish your skin's collagen and slow down the aging process.

Flavonoids also help protect you against heart disease.

### ***Grape seed extract and pine bark extract***

Two flavonoid powerhouses are grape seed extract and pine bark extract. They have twenty times as much free-radical scavenger power as vitamin C and fifty times more than vitamin E. The flavonoid phytonutrient in these two extracts is called proanthocyanidins. The flavonoid in grape seed extract comes from the seed of the grape, and the flavonoid in pine bark extract comes from the bark of the anneda pine tree.

### ***Quercetin***

The bioflavonoid quercetin is a powerful antioxidant, anti-inflammatory, and antihistamine that can help your body fight allergies. Allergic conditions include allergic rhinitis, eczema, hives, and even some cases of asthma. Quercetin inhibits the release of histamine. Thus, it acts as an antihistamine—but it's all natural! Quercetin is found in onions and apples. No wonder the old saying "An apple a day keeps the doctor away" is true since apples contain quercetin.

Not only are fruits and vegetables full of power-packed flavonoids, but many vegetables also contain chlorophyll. Let's look.

## Chlorophyll

Chlorophyll comes from the green pigment in plants. Just as the life of a person is in the blood, so the life of a plant is in the chlorophyll. In other words, chlorophyll is like the plant's blood.

Chlorophyll is very high in magnesium. It's vitally important for photosynthesis, which is the way plants convert light into energy. Foods that are high in chlorophyll include greens such as beet greens, spinach, collard greens, parsley, and other deep green vegetables. Wheatgrass, barley grass, alfalfa, spirulina, chlorella, and blue-green algae are plant "superfoods." They are superfoods because of their high chlorophyll content.

These superfoods are also high in flavonoids, which gives them anti-inflammatory, antitumor, and antiviral effects. Various algae, including chlorella, spirulina, and blue-green algae are very high in carotenoids. In fact, spirulina has about ten times the concentration of carotenoids as carrots. These different algae also contain nearly all the essential amino acids along with practically every mineral and trace mineral that your body needs! Green Superfood contains all of these high-chlorophyll foods. (See Appendix D.)

### ***Chlorophyllin***

Greens such as spinach, collard greens, beet greens, cilantro, and parsley, together with the superfoods, are very high in chlorophyllin. Chlorophyllins fight cancer by inhibiting many different carcinogens. Chlorophyllin can help reduce the cancer-causing substances, called heterocyclic amines (HCAs), in cooked meats and fried foods. They even help to reduce the carcinogens in cigarette smoke. They also help to protect DNA from radiation damage.

Not only are green foods packed with this vital substance, but also the magnesium levels they contain give them a double punch. Magnesium helps to cleanse the GI tract. As a matter of fact, it works similarly to a mild laxative. Therefore, green foods help your body remove toxins from your GI tract so they are not reabsorbed.

High-chlorophyll foods are effective antioxidants, cancer and tumor fighters, as well as virus fighters. Green food preparations, such as Green Superfood, can be added to your freshly squeezed morning juices. (See Appendix D.)

## Allium

Other important phytonutrients are the allium compounds. Garlic contains the highest concentration of these phytonutrients. Allicin is the main allium compound and is what gives garlic its strong odor. Garlic actually has over a hundred different compounds, and they are probably the reason garlic has so many therapeutic effects.

For instance, garlic helps to promote Phase Two detoxification of the liver. It protects against cancer. It has antibacterial, antifungal, antiviral, and antiparasitic properties as well. It also helps to detoxify the body of heavy metals such as lead and mercury, and it strengthens the immune system.

Cooking and processing garlic robs it of many of these incredible disease-fighting properties. That's why I recommend juicing garlic to get all its health benefits.

## Ellagic acid

Ellagic acid is found in strawberries, raspberries, grapes, and black currants. This powerful healing substance has been shown to inhibit cancer that has been chemically induced in rats.<sup>7</sup>

Ellagic acid also blocks against the cancer-causing effects of many different toxins, including compounds in cigarette smoke called PAH. It also protects against damage by toxins to chromosomes, which are our genetic blueprint. Finally, ellagic acid is a powerful antioxidant and can actually increase glutathione levels.

A new method of determining a food's antioxidant capacity is called ORAC (oxygen radical absorbency capacity). Foods with the highest ORAC scores have the greatest ability to neutralize free radicals. Fruits are at the top of the list. The top five foods on the list are prunes, raisins, blueberries, blackberries, and kale. Strawberries are number eight. Broccoli is number fifteen, and tomatoes are number forty-two. Isn't that amazing that blueberries, blackberries, and strawberries have a higher antioxidant capacity than most all other fruits and vegetables? (If you eat raisins, make sure they are organic since raisins are usually high in pesticides.)

## Vitamins and Minerals Through Juicing

Even though the majority of Americans appear to be healthy, most are not. The majority of Americans are actually taking inadequate amounts of vitamins and minerals.

### **Magnesium**

For example, Americans commonly don't get enough magnesium in their diets. The government says each one of us should get 310–420 milligrams of magnesium a day, but few of us do. Vegetables, especially green leafy vegetables, are very high in magnesium. By juicing green vegetables every day, or by taking Green Superfood, you will be sure to get all the magnesium you need.

Mineral deficiencies are even more common in the standard American diet than vitamin deficiencies. It's also common for women to get too little iron and calcium in their diets.

### **Folic acid**

One of the most common nutritional deficiencies in the world is folic acid deficiency. One reason for this is that we simply don't eat enough vegetables. In addition, some medications, such as birth control pills, contribute to this deficiency. Alcohol and stress can play a part also. Nevertheless, adequate folic acid is vital to good health; without it we stand to increase our risk of heart disease by having elevated levels of homocysteine (a toxic amino acid).

Folic acid is necessary for DNA repair, and it keeps your immune system strong. Studies have shown that high doses of folic acid can eliminate most of the precancerous cells on women with cervical dysplasia.<sup>8</sup> Dark green leafy vegetables, such as spinach and collard greens, are excellent sources of folic acid.

### **Vitamin C**

Even though severe vitamin C deficiency and scurvy are extremely rare in the United States and other countries, marginal deficiencies are relatively common. I believe this plays a role in the development of diseases such as heart disease and cancer. Excellent sources of vitamin C include freshly juiced citrus fruit such as grapefruit and oranges. Other sources include kiwi, strawberries, broccoli, and brussels sprouts.

Vitamin C is easily lost during both cooking and storage of the food. Vitamin C from natural sources contains bioflavonoids, which enhance the effect of vitamin C.

Juicing a wide variety of fruits and vegetables will assure you of getting enough of most all vitamins and minerals.

## Coming Attractions

These are just a few of the recent nutritional breakthrough discoveries found by researchers. Nutritional medicine is still in its infancy, but what we've learned thus far is truly exciting.

Without a doubt, many more important phytonutrients will be discovered and will offer more protection against cancer, heart disease, and other degenerative diseases.

But don't wait for scientific proof—start juicing today. Nevertheless, I want to encourage you to begin using these powerful phytonutrients every day by daily juicing fresh fruits and vegetables. They will play a major role in your detox fast, but don't stop there. Determine that after your fast is over you will make juicing fresh fruits and vegetables a part of your daily breakfast routine.

The research that we have already should convince each of us of the overwhelming healing power and health benefits of fresh, raw fruits and vegetables. Don't wait for more studies. Start making use of this lifesaving wisdom right now!

\* This is a dramatized account of a true story.

## Chapter 6

# DR. C'S DETOX FAST

**Y**OU STAGGER INTO THE KITCHEN HALF ASLEEP, DRAGGING THE BELT of your robe behind you like a long tail. Too groggy to speak, you pull your juicer out from a lower cabinet, plunk it on the counter, and reach for the apples, carrots, and other fruits and vegetables piled high in a giant bowl.

With the water running, you clean and chop the colorful ingredients of your first day's juice fast menu. In minutes, your juicer is whirring, spinning, and extracting the elements of your brand-new, healthier, detoxified lifestyle.

It's done. You slowly, carefully touch your lips to the glass, wondering if you'll be able to drink this concoction you just made. But as you touch it to your tongue, you're amazed. It's more than delicious—it's delightful and refreshing. You had been willing to grit your teeth and endure this juicing program because you were convinced of its benefits to your health. But you never dreamed you'd enjoy it so much!

I genuinely believe that you are going to find this fasting program more enjoyable, easier, and more rewarding than you ever expected. Not only that, but when you are through, your renewed energy and vitality will amaze you.

So let's get started with the juice fast portion of this detoxification program.

## Before Your Fast

Before beginning the actual juice fasting portion of this program, you should have been following the diet to support your liver for about two weeks (four weeks for those with extreme toxicity). As you've seen already, you will want to go back on the liver support diet for the same period of time following your juice fast.

If you've completed the liver support diet, you're ready to detox. So, let's get started. Here are some pointers:

As you begin, you should already have increased your intake of alkaline water to two quarts a day. Continue drinking at least two quarts per day of

alkaline water throughout the duration of your fast.

During the fast, I do not recommend consuming vitamins. You should have taken a number of vitamins and minerals during your two-week liver support diet. You must stop taking all of these supplements until your fasting period is over. Afterward, you will go back on the liver support diet for two additional weeks. At that point, you will need to resume taking these supplements until the two-week period is ended. You should continue taking a comprehensive multivitamin, a glutathione booster, and a chlorophyll drink daily even after completing the program. Many also need vitamin D3 and an omega-3 supplement.

## [How Long Should I Fast?](#)

Periodic, short juice fasts that last three to seven days at a time are an excellent way to detoxify your body. And using the guidelines provided, they are extremely safe. Fasting for longer than seven days should only be done under a doctor's supervision.

I usually recommend that patients start out by fasting one day and gradually work up to seven days. However, under a doctor's supervision, this fast can be continued for one to three weeks or even longer.

Detox fasting should be done several times a year. Once again—repeated juice fasts for four to seven days are usually enough time to cleanse the body.

## [Watch Out For . . .](#)

Fasting can produce some interesting changes in your body, so be aware of this before you begin. Some of these changes are more common than others. So, here are some precautions you need to consider.

- *You may experience light-headedness.* Light-headedness is common. Therefore, don't rise up suddenly from lying or sitting during your fast period. You may even experience some dizziness if you stand up too quickly. If you do get light-headed, lie down and elevate your feet on a few pillows.
- *You may experience changes in energy.* Some people become very fatigued during a fast. Others feel much more energetic. Don't be alarmed if you experience either of these extremes.

Initially you may be fatigued, but energy levels increase as you detox.

- *Your sleep habits may change.* You may not need as much sleep at night as normal. Don't be alarmed.
- *You should get plenty of rest.* During a fast, you will need plenty of rest, both during the day and at night. Be prepared to take a siesta in the afternoon for about thirty minutes to an hour and one-half, if possible. Some people may even need a morning nap.
- *You should limit activity.* I do not recommend any strenuous exercise during the fast. Take strolls in a park, walk on a beach, or enjoy any other slow, relaxing activities.
- *Constipation can be a problem.* Constipation is also common, especially during longer fasts. (You probably won't experience constipation on short, juice fasts especially when using a Vitamix blender, which retains all the fiber.) For this I recommend juicing pitted prunes or pitted plums along with apples. Or you may drink herbal teas, which we will discuss in the next section. Also, mixing one scoop of Green Superfood in one of the juices helps prevent constipation.

If you still cannot have a bowel movement, take magnesium citrate and increase the dose until you have a bowel movement. Usually 400 to 1,000 milligrams is sufficient. For severely constipated patients I recommend using an enema. Simply fill an enema bag with lukewarm water. One pint to one quart of water is usually enough. Then follow the instructions on the enema box. It is best to first lie on your back for a minute or so, then on your right side, then on the stomach, and then finally on your left side. Gently massage your stomach at the same time. If you still have problems with constipation, I recommend that you see a colon therapist who is able to administer colonics or colenemas.

- *You may have cold hands and feet.* During a fast it's common to experience a lowering of body temperature, which may make your hands and feet feel cold. Don't be concerned. Simply use an extra blanket at night and wear extra clothing.

- *Your tongue may become coated.* Another very common symptom during fasting is coating of the tongue. Your tongue may develop a white or yellow film. This film signals you that your body is detoxifying.
- *You may experience bad breath.* Your breath may take on an unpleasant odor as your body detoxifies. Just keep a toothbrush with you, and brush your teeth and tongue often with organic toothpaste such as Tom's of Maine brand.
- *Skin eruptions may occur.* Acne, boils, and rashes are other signs that your body is excreting toxins through your skin, which is the body's largest excretory organ. Make sure that you are drinking adequate water and taking adequate fiber and that you have at least one bowel movement a day.
- *Body odor may be a problem.* Some people even develop an offensive body odor as toxins exit the body through the sweat glands.
- *Nausea and vomiting may also occur during a fast.* This is usually a sign that you've become mildly dehydrated. That's why getting enough fluids is critically important during your fast.
- *Your urine may appear darker than normal.* This also usually means that your body is shedding toxins or that you are not consuming adequate liquids. So if this occurs, increase your fluid intake.
- *You may have added mucous drainage from your sinuses, bronchial tubes, and even the GI tract.* Don't be alarmed by this. Once again, these symptoms are usually just your body's way of voiding itself of many of the built-up toxins it has been storing.

## **Helpful Aids to the Detoxification Process**

You may want to incorporate some of the following helpful regimens to your cleansing protocol:

### **Exfoliating and cleansing the skin**

The epidermis is the outer nonvascular layer of the skin covering the dermis. You may be aware that your body secretes toxins and waste

through your skin each day. Taking proper care of your skin is a vital part of the detoxification process. If the pores of your skin are clogged with dead skin cells, the impurities and toxins may remain locked inside the body, placing stress on your liver and kidneys.

*Dry skin brushing* is an effective way to keep the pores of your skin open and clear. It is essential that your skin be allowed to “breathe.” Brushing the skin daily stimulates blood and lymph flow throughout the body, leading to a more efficient removal of waste.

You may want to invest in a loofah sponge or a natural soft-bristle brush. To brush your skin, start with the soles of your feet, working up your legs, torso, and arms until you have brushed the majority of your body, avoiding only your face. Use firm, hard strokes, brushing toward your heart to increase blood flow. The entire brushing process should take approximately five minutes. It may make your skin feel warm because you have increased circulation.

### **Infrared sauna**

Because our modern world has created new environmental issues, which have increased the number of pollutants and toxins that are inhaled, ingested, or absorbed into our cells and tissues, often our cells and tissues become overwhelmed with toxins. This absorption of toxins increases the risk of cancer, heart disease, diabetes, and immune disorders. The body’s cells must receive proper nutrients and expel these harmful toxins.

An infrared sauna can be effective to help the body get rid of harmful toxins, thus aiding the detoxification process. Infrared saunas use an infrared radiant heat source. This superior method of detoxification allows your body to secrete up to three times more perspiration than that of conventional saunas. This natural process rids your body of harmful toxins, including solvents, pesticides, and heavy metals, and may ultimately burn up to three hundred calories during a twenty- to thirtyminute session.

The infrared sauna stimulates the cellular metabolism and breaks up the water molecules that hold toxins within the body, thus allowing the body to void these toxins through perspiration. These treatments, combined with a customized diet and nutritional program, have vastly improved, restored, and rejuvenated many of my patients at the cellular level, allowing them to feel better and lead a healthier lifestyle. For more information on infrared saunas, see Appendix D.

## **Let's Get Started**

To get started on your juice fast, you will want to purchase lots of fresh, organically grown vegetables and fruits. I have provided a shopping list of vegetables for you to take to the store at the end of this chapter.

Organic vegetables are the best because they are grown without pesticides and herbicides. Since you are fasting to remove such chemicals, it's important not to take any in during your fast. I believe organic produce is the safest. It can be found at many of the larger health food stores. There are even health food stores that are as large as some supermarkets, such as Whole Foods. These have a wide variety of organic fruits and vegetables at a competitive price.

In addition, many of the larger supermarkets are beginning to stock organic produce as the public is demanding it. Our voices will be heard if we continue to ask the supermarket to carry organic products.

## **What If I Can't Use Organics?**

Nevertheless, organic vegetables tend to be more expensive, and they can be difficult to find. If you can't always use organics, then choose organic for the fruits and vegetables that are highest in pesticides: apples, celery, strawberries, peaches, spinach, nectarines (imported), grapes (imported), sweet bell peppers, potatoes, blueberries (domestic), lettuce, and kale/collard greens. Choose regular fruits and vegetables for the list of fruits and vegetables lower in pesticides: onions, sweet corn, pineapples, avocado, asparagus, sweet peas, mangoes, eggplant, cantaloupe (domestic), kiwi, cabbage, watermelon, sweet potatoes, grapefruit, and mushrooms.

Growers are free to use about four hundred different pesticides on crops. Each year in the United States, over one billion pounds of pesticides and herbicides are sprayed on the food we eat. Pesticides that have been banned in the United States are often shipped to other third-world countries. Fruits and vegetables grown in these countries are sprayed with pesticides banned in the United States and then exported from those countries back into the United States.

So here are some rules to remember when purchasing fruits and vegetables.

### Look for thicker peels

Usually, the thicker the peel, the safer the fruit. For example, bananas have thick peels and generally have little pesticide in the actual fruit. That is, unless they are grown in third-world countries where more potent pesticides can be used, which can penetrate the entire fruit.

Oranges, tangerines, lemons, grapefruits, and watermelons are also excellent fruits since they have a thicker peel.

### Produce with thin peels

Fruits and vegetables with thin peels or none at all usually contain higher pesticide residue. These include apples, grapes, peaches, strawberries, blueberries, nectarines, celery, and spinach. Fruits and vegetables with some of the highest levels of pesticides include celery, peaches, strawberries, and apples.

In addition to the pesticides that are sprayed on the plants, waxes are added to keep the produce from spoiling. Unfortunately for us, most of these waxes contain pesticides and fungicides too. These seal water in and prevent the produce from spoiling.

### Washing off produce waxes

If you've ever tried, I'm sure you found that these waxes are pretty difficult to remove. In fact, they usually can't be removed by simply washing them with water.

#### *Specially prepared cleansers*

You can purchase a natural, biodegradable cleanser from most health food stores. Use it to gently scrub off the wax, and then rinse the produce off. You may also simply soak your produce in a mild detergent such as Ivory or pure castille soap from a health food store. Gently scrub your fruits and vegetables and rinse them off.

#### *Hydrogen peroxide*

Another way to remove waxes and pesticides is to soak the fruits and vegetables in a sink of cold water. Then add 1 tablespoon of 35 percent, food-grade hydrogen peroxide (which can be purchased at a health food store) to the water. The sink should be approximately half-filled. Allow the produce to soak for five to fifteen minutes. Then rinse thoroughly with fresh water.

Soak fruits with thin peels and leafy vegetables for only five minutes or so. Thicker vegetables, such as carrots and other fibrous vegetables, should be soaked for ten to fifteen minutes.

### ***Clorox bleach***

Believe it or not, another good way to remove waxes and pesticides is to soak your produce in a sink half full of cold water. Then add 1 teaspoon of Clorox bleach. It must be the Clorox regular bleach, not a generic brand. Soak the produce for the same amount of time as above, and rinse them thoroughly for about three to five minutes.

## **Choosing a Juicer**

There are many different types of juicers, and some are very expensive. You may start with an inexpensive juicer such as a Juice Man juicer from Walmart, which costs about seventy dollars. The Champion juicer is an excellent juicer and will usually last for decades. My favorite juicer is the Vitamix blender because it is a whole food juicer that works more like a large blender. (See Appendix D.) It is able to completely juice and liquefy the entire fruit or vegetable, including the seeds. This has the added benefit of providing the fiber in addition to the vitamins, minerals, antioxidants, enzymes, and phytonutrients. However, it is more expensive, usually costing around four hundred dollars. I personally recommend the Vitamix blender. (See Appendix D.) If you choose another juicer, simply add at least 1 to 2 tablespoons of the pulp back to the juicer. Stir it up and drink it.

## **Guidelines for Your Fast**

### **The day before your fast**

On the day before your juice fast, prepare yourself for the fast by eating only fruits and vegetables.

### **Fast on the weekends**

I strongly recommend that you begin your juice fast on the weekend. By doing so, you will be able to spend more time resting. If you experience any side effects such as fatigue, light-headedness, or a headache, it will not interfere with your job (since it is the weekend).

The more you are able to rest during a fast, the better. I commonly tell patients who are sick to rest since, if they continue to work or exercise, the energy that would be used for healing is diverted for other body activities. Therefore, during the fast it is best to rest so that your energy can be directed at healing and detoxifying.

### **Don't use prepared juices**

It's very important that you juice raw, fresh fruits and vegetables. Don't try to do this fast by purchasing prepared juices. They are simply not the same. Fresh juice contains the living enzymes, phytonutrients, antioxidants, vitamins, and minerals. Bottled, canned, and processed juices have been pasteurized. Many of the phytonutrients and enzymes have been lost in the process.

### **Don't drink alcohol, coffee, or sports drinks**

During your fast, drink only juices and herbal teas. You may also sip soup broth by gently warming vegetable juice.

Limit teas to herbal teas and green, white, and black tea. Also, drink plenty of alkaline water, about two quarts a day.

### **Sip juices slowly.**

When drinking your specially prepared juices, sip them slowly to mix the juice with saliva. Don't gulp them down.

## **Preparing Produce**

Peel oranges and grapefruits, but be sure and leave on the white, pithy part of the peel. That is the part that contains the important bioflavonoids.

Leave the skins on all other fruits and vegetables. Remove the green top portion from carrots, since they may contain a toxic substance. Slice the fruits and vegetables so that they fit nicely into your juicer.

It's best to drink the juices immediately after juicing—but some people simply don't have the time to use the juicer throughout the day. You may store your juice in the fridge and drink it throughout the day. As soon as a fruit or vegetable is sliced, it begins to lose nutritional value. For instance, cut an apple and place it on a dish on your counter. You will notice that it doesn't take long to turn brown. This is due to oxidation from exposure to the air.

When you slice cucumbers, they lose about 40 to 50 percent of their vitamin C content within the first few hours. A cantaloupe that has been sliced will lose about a third of its vitamin C content within a day. That's why it is always best to drink fruit and vegetable juices immediately to get the maximum nutritional benefits. However, you are still getting tremendous benefits even if you store your juice for one day and drink it during that day. Remember to include a slice of lemon or lime when juicing to slow down oxidation. Recall when you slice an apple it turns brown rapidly, but by squeezing lemon or lime juice on it, the browning, or oxidation, is delayed significantly.

## **Best Fruit and Veggie Choices**

When you're juicing, keep in mind that some fruits and vegetables provide more health benefits than others.

Fruits and veggies that are especially cleansing on the juice fast include: cabbage, watercress, and other cruciferous vegetables; greens; dandelion root and dandelion greens; sprouts; celery; carrots; lemons and limes; apples; beets; and berries (blueberries, blackberries, and strawberries). Caution: Some people may be allergic to berries.

For optimum detoxification, drink one juice drink a day that contains cruciferous vegetables such as cabbage or broccoli and beets. The phytonutrients in these vegetables help detoxify your body by helping to detox your liver and enhancing the flow of bile. Include dandelion greens or dandelion root and watercress to support your liver in its detoxification efforts during the fast too.

## **The Basics of Juice Fasting**

In general, I recommend a four- to seven-day juice fast. On the next few pages you will find four different juicing recipes, which you can alternate each day. It's my recommendation that you prepare one recipe per day for each meal (drinking it three times per day). It is extremely important to choose organic celery, apples, peaches, and berries, as these foods are typically very high in pesticide residue. Organic fruits and vegetables are produced with the use of feed or fertilizer of plant or animal origin without the use of chemicals, antibiotics, growth stimulants, or pesticides.

Of course, this is simply a guideline, and you are welcome to find your own rhythm and favorite juicing recipes. Be creative!

## Suggested Juicing Recipes

### **GREEN LIMEADE**

- 1 package organic field greens—red, green, or romaine (not iceberg)
- 6 organic limes, peeled (if blended in Vitamix, use of the peel)
- 1 small piece of ginger
- 2 organic apples
- ½ bunch organic celery
- 1 organic cucumber

**Instructions:** Juice and add more ice or water if desired. Add 1–3 tablespoons of the pulp back to the juice, stir, and enjoy!

---

### **VEGETABLE COCKTAIL**

- 5 organic carrots
- 1 organic green pepper
- 1 organic broccoli stalk
- 2 stalks organic celery
- 1 organic cucumber
- 1 organic hot pepper
- 1 organic lemon

**Instructions:** Juice and add 1–3 tablespoons of the pulp back to the juice. Stir and enjoy!

---

### **SPINACH PINEAPPLE DRINK**

- 1 bag organic spinach
- 1 organic pineapple, skin cut off
- 1 bunch organic celery
- 4 organic cucumbers
- 2 organic lemons, peeled

**Instructions:** Juice all and add 1–3 tablespoons of the pulp back to the juice. Stir and enjoy!

---

## VITAMIX DRINK

3–4 organic baby carrots or handful of organic dandelion leaf, organic spinach, organic kale, or organic collard greens

1/8 organic lime with skin or 1/8 organic lemon with skin

1 organic Granny Smith apple or 4 oz. organic blueberries, organic blackberries, organic strawberries, or organic raspberries

**Handful of organic broccoli, organic cauliflower, organic cabbage, organic watercress, or organic beets**

1–2 stalks organic celery (optional)

4 oz. water

4 oz. ice

You can vary your Vitamix Drink by making different selections from the four main groups. Patients usually do best if they rotate their fruits and veggies over four days and don't use the same ones each day. For example, one day use carrots, lime, blueberries, broccoli, and the next day use spinach, lemon, Granny Smith apple, and watercress. You may also juice all your fruits and veggies in the morning and keep your juice in the fridge for convenience.

**Instructions:** Juice all.

---

## [Cruciferous Veggies Are Important!](#)

I want to emphasize that it is critically important to drink at least one juice drink with cabbage or broccoli and one juice drink with beets each day while on the juice fast to increase and support liver detoxification as well as to enhance the flow of bile.

Any of the vegetable combinations can also be juiced first and then slowly warmed. Don't overheat them. Then you may have them as soup. However, never boil the juices, for that will destroy their enzymes. Take them off the stove before they boil. They should be warm, not hot. If you have a Vitamix blender, the juicer has the ability to heat up the juice through rapid spinning. Remember, it's best to choose organic.

## [Soups](#)

### **SOUP 1**

2 garlic cloves  
½ organic cucumber  
2 stalks organic celery  
A handful of organic spinach

---

### **SOUP 2**

4 carrots  
2 stalks organic celery  
A handful of organic parsley or organic cilantro  
1 garlic clove

---

### **SOUP 3**

2 organic tomatoes  
1 organic cucumber  
2 stalks organic celery  
1 garlic clove

---

### **SOUP 4**

¼-½ head of organic cabbage  
2 stalks organic celery  
2 organic carrots  
A handful of organic parsley or organic cilantro

---

### **SOUP 5**

1 organic cucumber  
2 organic tomatoes  
A handful of organic parsley or organic cilantro  
1 garlic clove

---

## **Spice It Up**

You may add a dash of Tabasco sauce and/or dulse powder. Dulse is a very tasty, salty seaweed that has a red/purple leaf. It is high in potassium, calcium, iron, and iodine, and it is used in soups and salads.

## **Herbal Teas**

### **MILK THISTLE TEA AND DANDELION TEA**

Certain herbs are very important for supporting the liver in detoxification during the fast. Other herbs are important for supporting the kidneys and the GI tract. Milk thistle and dandelion tea are very important in supporting the liver for detoxification.

Milk thistle actually protects the liver from toxins, and dandelion helps to increase bile production and stimulate the gallbladder to excrete the bile. Drink milk thistle tea every day during your fast or with dandelion tea to protect the liver and to help rid the body of bile, which contains many of the toxins.

Herb teas can be sweetened with a small amount of stevia, which can be found in most health food stores.

---

### **ASPARAGUS TEA AND NETTLE TEA**

Since toxins are eliminated primarily through the kidneys and GI tract, it is critically important to support the kidneys during a fast. Asparagus tea along with nettle tea has diuretic properties. This also helps to support the kidneys so that they can eliminate toxins more effectively.

---

### **GREEN TEA**

Green tea is very high in polyphenols called catechins. This tea has two hundred times more antioxidant power than vitamin E and five hundred times more than vitamin C. Green tea does contain caffeine, however. So, don't drink it too late in the day, or it can interfere with sleep. I strongly recommend that you enjoy green tea in the morning and for lunch. Always choose organic.

---

### **CHAMOMILE TEA**

Chamomile tea benefits digestion and also has calming properties. It is an excellent tea to drink after dinner to help calm you before going to bed.

---

### **SLEEPY TIME TEA**

Sleepy Time tea is an effective herbal remedy for those who suffer from insomnia.

---

## **SMOOTH MOVE TEA**

Smooth Move tea is an excellent herbal tea to temporarily help with regularity during a juice fast.

---

## **Breaking Your Fast**

Breaking your fast often is the most difficult and most important part of fasting. Therefore, you must understand how to break your fast before you even begin.

You must reintroduce foods gradually to realize the greatest health benefits of fasting. You see, your digestive tract has been at rest. That means hydrochloric acid and pancreatic enzymes may not be available to help you digest proteins, starches, and fats right away. Therefore, the longer your fast time, the more slowly you should come off of your fast.

Here's an eating schedule for coming off of your fast if your fast is three days or longer. If the fast is three days or less, you can eat fruit the first day, then go on the liver support diet for two weeks as outlined in chapter 8. Remember not to overeat or bring on meats and fats for the first few days after stopping a fast. If your fast is four days or more, then slowly reintroduce foods, starting with fruits.

### **The first day after your fast**

Eat fresh fruit such as apples, watermelon, grapes, or fresh berries as often as every two to three hours on the first day that your fast is broken.

However, don't eat papaya or pineapple on the first day after a fast. These fruits contain strong enzymes that may upset your stomach. Fruits with the highest water content, such as watermelon, are the easiest to digest.

### **The second day after your fast**

On the second day after the fast is broken, have fruit in the morning. For lunch and dinner, have a bowl of fresh vegetable soup.

Eat slowly and chew your food very well. Be sure not to overeat.

Be sure you continue to drink at least two quarts of alkaline water a day. You may also continue to drink your juices once or twice a day.

### **The third day after your fast**

On the third day, you may add to the fruit and vegetable soup a salad and/or a baked potato. You may also add a slice of whole-grain bread such as Ezekiel bread, brown rice bread, or millet bread.

### **The fourth day after your fast**

On the fourth day, you may introduce a small amount (1 or 2 ounces) of free-range chicken, turkey, fish, or free-range lean meat.

Just remember, the key is eating slowly and chewing very well. Drink water thirty minutes before your meal, but not more than 4 ounces with your meal. Most importantly—don't overeat.

## **Special Advice for Special Problems**

Not everyone who begins a fasting program is in the same healthy state. You may have some physical problems that you need to address before beginning to fast. Therefore be on the lookout for these special problems before starting this fasting program.

### **Candidiasis, food allergies, parasites**

If you regularly experience excessive bloating, gas, and diarrhea, you may be suffering from candidiasis, bacterial overgrowth in the small intestines or even a parasitic infection. You may also be suffering from malabsorption, maldigestion, increased intestinal permeability, food allergies, or food sensitivities.

If you have any of these symptoms, I strongly recommend getting a comprehensive digestive stool analysis with parasitology and/or a food sensitivity test. (See Appendix D.)

In addition, I recommend that you read my book *The Bible Cure for Candida and Yeast Infections* and follow the special diet it contains for three months before you start fasting.

### **Hypoglycemia**

If you have hypoglycemia, first add 1–3 tablespoons of pulp back to your juice, and do this every two to three hours. You can grind 1–3 tablespoons of flaxseeds, or take another form of fiber, and add it to your

juice or simply use a Vitamix blender, which retains the fiber. Juice every two to three hours instead of juicing only four or five times a day. If you do not have a Vitamix, simply add 1–3 tablespoons of the fiber extracted from the juicer back to your drink.

You can place 1–3 tablespoons of flaxseeds into a coffee grinder and grind them. Other good sources of fiber include rice bran, psyllium seeds or husks, and oat bran.

### **Sensitive GI tract**

I have found that patients with very sensitive GI tracts do better when they separate fruit juices from vegetable juice.

If you experience pain, bloating, gas, or diarrhea after drinking one of the juices, simply omit that juice and try a different one. By process of elimination, you can find what fruit or vegetable is causing the problem. When you identify the item to which you are sensitive, simply eliminate it from your juice fast.

## **Consider Making Juicing a Lifestyle**

Many believe that they can fast one time and go back to eating the same high-fat, high-sugar, high-processed starches, and high-meat diet that caused them to develop the degenerative diseases in the first place. That would be the same as saying that if a person stopped smoking for a month, then he could go back and start smoking his two packs of cigarettes a day. Don't go back to the old unhealthy habits. Instead, let your detoxification program and fast be the beginning of a new, healthier lifestyle.

To make juicing a regular part of your healthy lifestyle, consume at least 8–16 ounces of juiced vegetables and fruits daily. Continue using the Green Superfood on a daily basis too. It's about equal to getting six servings of vegetables.

In addition, keep eating lots of fruits, vegetables, and whole grains as well as legumes, nuts, and seeds. Eat smaller amounts of lean, free-range meats and poultry. Limit or avoid dairy. Choose organic skim milk products if you consume dairy. Limit or avoid processed foods. Finally, choose good fats such as extra-virgin olive oil instead of saturated and hydrogenated fats.

## **Shopping List**

When you go to the grocery store, shop for the following organic fruits and vegetables: carrots, cabbage, Granny Smith apples, cucumbers, beets, celery, parsley, cilantro, berries (strawberries, blackberries, blueberries, raspberries), lemons and limes, grapefruit, pineapple, ginger root, watermelon, garlic, greens (spinach, collard greens, beet greens, dandelion greens), tomatoes, sweet potatoes, dandelion root, and watercress.

## **The Lemonade Fast “Master Cleanse”**

You may want to use a master cleanse periodically to help your body detoxify. There are several kinds available at health food stores, or you can use the following recipe to create your own:[1](#)

- 2 Tbsp. freshly squeezed lemon or lime juice
- 1 Tbsp. 100 percent pure maple syrup (from a health food store)
- 1/10 tsp. cayenne pepper or less
- 8 oz. spring water
- Liquid stevia to taste

Mix and drink eight to twelve glasses a day and keep in the fridge. Eat or drink nothing else except water, laxative herb tea, peppermint tea, or chamomile tea.

## **In Conclusion**

Remember that your body is the temple of God. Determine to keep it strong and healthy. Continue to do periodic juice fasts every month or every two to three months or at the end of each season, depending on your degree of toxicity or if you have a degenerative disease. You will reap a lifelong harvest of good health.

Third John 2 says, “Beloved, I wish above all things that thou mayest prosper and be in health, even as thy soul prospereth” (KJV). You will fulfill this scriptural truth in your own body and the bodies of your family members by sowing to your health and reaping the reward of divine health.

An essential part of this program is the role it plays in cleansing and restoring your body’s own powerful detoxification system. By better

understanding how detoxification works within you, you can be better equipped to help your body enjoy vital and life-giving toxic relief.

## Chapter 7

# YOUR CHAMPION PRIZEFIGHTER

**Y**OU MAY BE OLD ENOUGH TO REMEMBER THE GARBAGE WORKERS' strike in New York City. The garbage piled high along all the streets and curbs. Before long, it overflowed into the streets and littered the sidewalks. You can't imagine the smell! Before it was all over, the backlog of uncollected trash and garbage threatened to cripple the entire city and affect the health of everyone in it. What a mess!

Many of our bodies are in the same state of crisis, but we don't know it. The garbage from our diet, the garbage from our unhealthy lifestyle, and the garbage from our toxic environment are crippling our entire systems to a point that degenerative disease begins.

Chemicals and toxins are everywhere. Our bodies simply cannot keep up.

Yet, even though toxins without and within bombard us, our bodies are uniquely created to handle enormous amounts of toxins, poisons, germs, and diseases. Your body's detoxification system is astonishingly powerful—and with the proper support and diet it is able to both detoxify and eliminate chemicals and toxins.

That's where you come in. You have it within your power to provide your incredible liver and GI tract with enough help so that they can once again function at peak efficiency. The benefits to you are unending. They include preventing and even reversing disease, having more energy, looking better, feeling better, losing weight, and much more.

It's important to gain a good understanding of just what these amazing detox systems are all about, for they are your first line of defense against disease. If you don't have cancer, heart disease, or another degenerative disease, these defense systems may be the reason.

The first system of toxic cleansing is your liver. It's an amazing organ that works day and night to cleanse your blood from chemicals, poisons, bacteria, and any other foreign invader that comes to rob you of your good health.

To be healthy and live on this toxic planet, you must have a healthy liver. Your liver is a champion prizefighter among detox organs. You must

keep it healthy and working at peak efficiency. That's why it's vital that before you begin your fast, you undergo a two-week nutritional program (four weeks if you're extremely toxic) to strengthen and support your liver so it can carry out its key role in the detoxification process. (See chapter 8 for the nutritional program.)

If you were a general in the army fighting an all-out war, you wouldn't send your best, frontline troops into battle without the best weapons, uniforms, and provisions. Well, because of the toxic world in which you live, your body is fighting a war every day. The good news is that it's a war that it can win. But you have an enormous part in ensuring the long-term successful outcome.

Let's look at some of the vital ways in which you can supercharge your liver's frontline defense abilities against toxins, chemicals, and poisons. But first, let's get a good understanding of what this amazing front line of defense actually does for you.

## **Your Body's Natural Detox System**

The liver weighs about five pounds and is the largest single organ and the hardest-working organ in the body. If you could look into your body right now, you would see that your liver is about the size of a football. It sits not far from your heart, which is about the size of your fist.

This amazing detox organ has many, many functions—about five hundred as a matter of fact. But it has five main functions. Let's look at them:

1. It is a major part of your body's immune defense, filtering your blood to remove toxins such as viruses, bacteria, yeast, and other poisonous material.
2. It stores vitamins, minerals, and carbohydrates.
3. It processes fats, proteins, and carbohydrates.
4. It produces bile, a substance that breaks down fats so they can be digested.
5. It breaks down and detoxifies hormones, chemicals, toxins, and metabolic waste.

## **How This Giant Works**

It's amazing how little we know about how our bodies actually work. We may understand the most complicated details about car engines and computers. Yet few of us really comprehend the most incredible creation of all—our own human bodies. If we did, we'd be absolutely amazed.

Just how does the liver cleanse your body and keep you well? This amazing filter has three main ways to detoxify the body:

1. Filtering your blood
2. Secreting bile
3. Using a two-step enzyme process of detoxification

Let's investigate.

## **Your Giant Filter**

The first way is by filtering your blood. Do you have a car? The oil filter in your car filters the oil, keeping it clean so that the engine runs smoothly. But what would happen if you changed the oil without changing the oil filter? The fresh new oil would become dirty as it passed through the dirty oil filter. The liver detox program and fasting are like changing the oil filter so the liver can get caught up on its work of cleansing and detoxing the body.

Every minute, about two quarts of blood are filtered through your liver. That's an amazing amount of blood when you consider that most of our bodies have only about five quarts of blood.

If you have a swimming pool in your backyard for your kids, its filter would have to clean about half of the pool's water every minute to keep up with what your liver can do.

When your liver is working efficiently, it is able to filter out 99 percent of the bacteria and other poisonous toxins from your blood before sending it back into circulation.

Are you the one in your family who is responsible for keeping the oil filters in your car changed? Or are you responsible to keep the air filters for your heating or air conditioning system clean? Perhaps you've been the one in charge of maintaining the filter in your backyard pool. If so, you have a pretty good idea of how much maintenance a filter requires. Any filter needs continual maintenance to keep it clean and efficient. Your liver is no different.

Think about the filthy filter that you pull out of your air conditioner, or that filthy, black oil filter you take out of your car after three thousand to five thousand miles. Filters become packed with the dirt and grime they clean. And like any other filter, your liver can get overloaded with toxins.

Here are some ways that your natural filter gets overloaded with toxins:

- From toxins in our food
- From toxins in our water
- From poor digestion
- From yeast and bacterial overgrowth in the intestinal tract
- From food allergies and sensitivities
- From parasites
- From toxins in the air
- From toxins in the home or workplace
- From thousands of free radicals produced in every cell in the body
- From impaired liver function from alcohol, drugs, a fatty liver, medications such as statin drugs, and viral hepatitis

Like the dust and dirt that accumulate in your air filter, these toxins will eventually overwork your liver so that it may not be able to filter effectively. When this happens, your liver has to work harder and harder to keep filtering toxins. Before long it gets so overworked that it cannot function very well.

If you have ever tried to vacuum your carpet when the sweeper bag was full, then you can picture how this could happen. Now you begin to experience the symptoms of toxic overload.

## **Watch for the Signs**

We doctors are always looking for signs that indicate something is going on beneath the body's surface that we can't easily see.

You should learn to watch for certain signs too. Here are some signs that will indicate to you that your body is on toxic overload: autoimmune diseases such as rheumatoid arthritis, lupus, multiple sclerosis, Crohn's

disease, and ulcerative colitis; osteoarthritis; chronic fatigue; chronic headaches; psoriasis; acne; food allergies; constipation; diabetes; coronary artery disease; atherosclerosis; chronic infections; recurrent infections; angina; and hypertension.

If you have any of these signs of toxic overload, you will need to go on a two-week liver dietary program to build up your liver before you begin your detox fast.

## **What About You?**

Are you often irritable? Do you have bouts of anger and even rage? Do you have dark circles under your eyes? You may have liver toxicity. It's very common for those with a toxic liver to have bouts of anger and rage. Here are some other signs and symptoms you should watch for:

- Pallid skin
- A coated tongue
- Bad breath
- Skin rashes
- Poor skin tone
- Itchy, weepy, swollen, and red eyes
- Yellow discoloration of the eyes
- Offensive body odor
- Itchy skin
- Mental disorientation
- Sleepiness or fatigue
- Swollen abdomen
- Easy bruising
- Altered or bitter taste in your mouth
- Purple spider veins on your chest or abdomen

## **Liver Detox Method #2**

The filtering of blood performed by the liver is only the beginning. It is Detox Method #1. The liver also detoxifies your body by removing toxins in the “bile.” This is Detox Method #2.

Every day your liver produces about a quart of bile. This substance actually helps to digest dietary fats by breaking them down so they can be used as fuel. You see, your body could never fully use the olive oil, nuts, and other fatty foods you feed it without this complex method of processing it.

Not only does it break down fats, but it also breaks down fat-soluble vitamins through this same process.

A very important function of bile, however, is to eliminate poisonous toxins from your body. It becomes the vehicle for flushing them out of your body through your colon. This process starts in the liver where they pass through bile ducts, the gallbladder, and the small intestine, and are eventually eliminated through the colon. However, if you are constipated or you don't eat enough fiber or high-fiber foods, these toxins and bile may remain in the intestines too long. When this happens, the toxic poisons that should have been flushed from your body are actually reabsorbed.

In a manner of speaking, this situation is little different than when your septic system backs up, except that the toxic effect may even be worse. But the difference is that you don't notice it right away. You may not notice it for years, until disease and chronic pain begin to rob you of your freedom and vitality.

You can keep this kind of backup from taking place by making sure your diet is loaded with plenty of fiber. Such a simple solution really can spare you years of grief and pain because of degenerative illness!

If your diet lacks fiber, bile and toxins will circulate back to the liver by way of a system known as the “entero-hepatic circulation.” In this system, a portion of the small intestines called the ileum reabsorbs 95 percent of bile acids and the toxins they contain. From here they are taken back to the liver.

The bile that is produced by the liver is actually stored in the gallbladder. The liver excretes its toxins in the bile. Bile is the fluid manufactured from three ingredients: bilirubin, lecithin, and cholesterol. If these three ingredients get out of balance, such as when you have too much cholesterol, then crystals, sludge, or even gallstones can form. It is

important to insure adequate bile production so that toxins will be eliminated through the bile and sludge will not form. Adequate water intake, as well as lecithin, phosphatidyl choline, dandelion root, beets or beet extract, celery, radish, artichokes, and adequate fat intake usually ensure adequate bile production.

### **Liver Detox Method #3**

Method number three is by far and away the most important one. This is the method of detoxing poisons and other toxins. It involves a two-step process that has the same effect as changing the oil filter on your car.

This two-step process of detoxification neutralizes toxins and other chemicals and substances that need to be removed from the body. It is an absolutely phenomenal process that deep cleanses and removes most of the thousands of poisons, chemicals, and toxins to which we are exposed every day.

Your liver performs more than five hundred different functions, and many of them are happening at the same time. Still, this two-step filtering process is your liver's greatest and most important role. Without it, your body would suffer a similar fate as your car if you never changed the oil filter. It would eventually fill up so full of toxins that you would probably die prematurely.

Many of these chemicals are fat soluble, which means that they can be stored in the fatty tissues of the body if the toxins are not effectively detoxified and eliminated by the liver and GI tract. These toxins can be stored for years on end and later released when you diet, exercise, or perspire—but especially when you fast. Infrared saunas and, to a lesser degree, exercise that involves perspiring are also excellent ways to excrete fat-soluble toxins through the skin, which is the body's largest excretory organ.

Have you ever placed vinegar and oil in a jar and shaken them together to pour on a salad? If you let the jar sit for a few minutes, they eventually separate because oil and water don't mix.

They don't mix in your body, either. So when your body wants to remove fats or fat-soluble chemicals and toxins, it must change them into a water-soluble form to get rid of them. Your amazing liver does just that.

It transforms these fat-soluble toxins and chemicals into watersoluble chemicals so they can be excreted from the body.

This two-step filtering process is simply called Phase One and Phase Two detoxification. Let's take a look at these life-saving processes.

## **Phase One Detoxification—Your Chemical Factory**

Not only is your liver a giant filter, but it is also a chemical factory. Phase One detoxification involves thousands of chemical reactions. In the Phase One detoxification pathway, enzymes break down poisonous toxins. Phase One detoxification uses as many as one hundred different enzymes to accomplish its task.

When a toxin is processed by the Phase One detoxification system, different things can happen to it.

- It may become neutralized.
- It may be changed into a less toxic form.
- It may become more water soluble and then eliminated through the bile or urine.
- It may be transformed into an even more toxic substance that will create more free radicals.

This final result of Phase One can damage your liver. When these very toxic substances are formed, they can produce so many free radicals that they drain your liver of its antioxidants, including the vital antioxidant glutathione.

## **What Happens During Phase Two?**

Phase Two detoxification kicks in when Phase One has created one of these intermediate substances. A toxic intermediate is similar to a stubborn stain that needs a second wash and rinse cycle to remove it.

These intermediate toxic compounds that have been partially detoxified by the Phase One detoxification pathways now need to be further broken down and bound to an amino acid or nutrient for Phase Two detoxification; in order to be water soluble, however, the glutathione conjugation pathway is the most important detox pathway. This pathway is responsible for detoxification of approximately 60 percent of the toxins that are excreted

in the bile. This pathway detoxifies toxic metals, petroleum products, many solvents, drugs such as Tylenol and penicillin, bacterial toxins, alcohol, pesticides, herbicides, and fungicides.

If too many drugs, chemicals, heavy metals, or toxins are processed, the nutrients—and especially the glutathione—it takes to fuel so much detoxification gets used up. Poisonous toxins then begin to build up again. At a cellular level, it starts to look like the New York garbage strike.

## [Eating for Your Liver](#)

Since our diets often consist of processed, refined, and fast foods, many Americans lack the necessary vitamins, minerals, amino acids, and other nutrients the liver needs to do the job of Phase Two detoxification. When you combine poor nutrition with our overwhelming exposure to toxins, it is not difficult to see how the liver becomes overloaded and overwhelmed.

Through Phase One detoxification, your liver is able to change drugs, toxins, chemicals, and hormones into intermediate compounds that are now ready to be excreted or to go through Phase Two detoxification. Phase One is similar to bagging your garbage and taking it out to the street. Phase Two is like the garbage man putting it in his garbage truck and taking it to the dump. However, for efficient Phase One and Phase Two detoxification, your liver must have specific raw materials for each individual detoxification “pathway.”

When large amounts of drugs, toxins, or heavy metals pass through your liver, they can use up much of the store of the master detoxifier and master antioxidant, glutathione. Your body and your liver have more of the powerful antioxidant glutathione than any other antioxidant—and it is the most important intracellular antioxidant as well. This mighty antioxidant and detoxifier helps the body rid itself of heavy metals such as mercury, lead, cadmium, and arsenic.

Excessive exposure to toxic chemicals, such as organophosphate pesticides, will eventually cause your body’s glutathione levels to be depleted. A diet too low in protein, cruciferous vegetables, or other sources of glutathione can also cause your body’s reserves to dip too low. Here are some other factors that will drain glutathione from your body:

- Excessive exposure to cigarette smoke
- Excessive exposure to auto exhaust

- Excessive exposure to paint fumes
- Excessive alcohol consumption
- Excessive exercise, such as marathons
- Excessive intake of acetaminophen (Tylenol is the number one cause of acute liver failure in the United States)1

When glutathione is used up faster than it can be produced from your diet, you eventually become much more susceptible to cancer.

The special diet in the next chapter is designed to help you to be sure that your body has all of this powerful antioxidant and detoxifier that it needs.

## **Slowing Down the Process**

It's essential that Phase One and Phase Two are able to move along without any hindrances. Imbalances can create problems. Taking too many medicines all at once can slow down Phase One. Toxins and even certain foods can slow down this process also. This may cause a toxic buildup or toxic overload that can eventually damage the liver cells.

Some medications can hinder Phase One enzymes. They include:

- Antihistamines (Seldane and Hismanal, which have been taken off the market)
- Ketoconazole (Nizoral, an antifungal medication)
- Benzodiazepenes such as Xanax, Ativan, and Valium (Do not stop taking these medications, but consult your physician to see if you can be slowly weaned off them.)

So, if you have any of the symptoms of toxicity, stay away from these medications. It's important that your body's process of cleansing progress unhindered.

## **In Conclusion**

Trouble also results when the detox process moves too quickly. When Phase One breaks down toxins so fast that Phase Two cannot process them all, those extremely toxic intermediate toxins build up. So, you can see why it's important to keep this cleansing process moving along. When the

process gets stalled and dangerous poisons back up, enormous amounts of free radicals are released that can cause great damage not only to the liver but to other tissues and organs as well.

When this occurs, bile can damage the intestines and the pancreas. Free radicals can damage cells and can even cause genetic damage, leading to cancer. Therefore, it's essential to keep these powerful detoxification phases functioning in synchrony smoothly and cleanly.

The special dietary program outlined in the following chapter will help you to do just that. This nutritional program is uniquely designed to strengthen and support your liver to prepare it for the increased role of detoxification during your fast.

## Chapter 8

# A NUTRITIONAL PROGRAM FOR A HEALTHY LIVER

**I**T'S IMPOSSIBLE TO GET AWAY FROM IT. YOU ARE WHAT YOU EAT—especially when it comes to your physical body. And what you eat will make all the difference in maintaining your liver.

This program of cleansing and detoxification begins with a diet and regimen of supplements that you will need to take for a period of at least two weeks to prepare your body for a juice fast and to restore your body following the fast.

The first part of this program is dietary. The following dietary guidelines will help cleanse and support your liver before and after your detox fast. To get the optimum benefit of this plan, be careful to strictly follow these guidelines.

First, you need to change your diet and lifestyle to reduce the amount of toxins you are taking in. In addition, you will want to improve your body's ability to eliminate toxins.

## A Winning Attitude and Helpful Support

Begin the healthy liver diet with a winning attitude and the support of your friends and loved ones! Not only do you need a determined attitude to make necessary lifestyle changes, but it will be very important to maintain a positive and cheerful outlook as well.

When making lifestyle changes that affect your entire family, it is best to discuss the program with them first. A supportive family and friends working together and encouraging each other throughout the program are a powerful force for success. The most important thing you will need before beginning the healthy liver diet is a positive attitude. Second to that, a supportive family can help you achieve your goals for living in divine health. With these two considerations in place, you are ready to begin.

## Eliminate Toxins

Avoid cigarette smoke, alcohol, and drugs. Set a goal of decreasing your intake of all medications. If you are on prescription medicines, you must, of course, do this with your doctor's help. Except for a few medications that will be mentioned later, it is best not take any medications during your detox fast.

If you take a lot of over-the-counter medicines, consider more natural ways to treat your various medical conditions, such as using vitamins, herbs, and homeopathic remedies, and refer to the books in my Bible Cure series. In other words, if you have a neck strain from tension, consider warm baths and massages first before taking medications for neck pain. If you suffer from constipation, consider more natural ways to regulate your system, such as eating more fruit and vegetables, increasing fiber, taking magnesium, vitamin C, Smooth Move tea or other supplements before reaching for laxatives.

Just remember, be sensible. Never go off medications that you need without consulting your doctor.

Once your body is cleansed of built-up toxins, you may discover you have much less need for these medications.

## **Make Liver-Friendly Diet Choices**

Cleaning the filter on your pool may seem simpler than maintaining your body's filter. But liver maintenance is not difficult. It can be accomplished by eating a liver-friendly diet. Therefore, make the right choices.

Here are some foods to avoid:

- Processed foods
- Refined foods
- Simple sugars, including honey
- Fast foods—burgers, fries, pizza, fried chicken, tacos

Dramatically decrease your consumption of or avoid the following:

- Meat (choose organic extra-lean, free-range meats and poultry)
- Dairy products (choose organic skim milk, plain yogurt or kefir, and small amounts of organic butter if you must have dairy products)

- Saturated fats—cheese, marbled meats (choose organic skim milk cheese or soy cheese, and organic lean meats)

Eliminate these foods:

- Trans fats, hydrogenated, and partially hydrogenated fats such as margarine, shortening, commercial peanut butters, pastries, and whipped toppings
- Deep-fried foods
- Preserved meats
- Fatty meats
- Animal skins
- Processed vegetable oils—most salad dressings (organic extra-virgin olive oil is a good choice to use)
- Alcohol
- Coffee
- Colas
- Chocolate

Choose a diet with plenty of the following: \*

- Organic fruits
- Organic vegetables
- Free-range meats that are organic and lean or extra lean

Eat as many raw organic vegetables as possible. When cooking vegetables, steam fresh organic vegetables instead of boiling them. Prepared fresh organic vegetables are always better than frozen, and frozen are better than canned. Try preparing organic homemade vegetable soup too. It's a delicious way to give your body a wide variety of vegetables. Just try not to overcook them, and use as many fresh, raw vegetables as possible. You may also lightly stir-fry vegetables with olive oil or grill them.

Freshly juiced vegetables and fruits are great as well. Drink a glass of freshly juiced fruits and vegetables in the morning instead of coffee.

Certain vegetables are more important than others for liver detoxification. Cruciferous vegetables are essential. Here are some that

you should eat often:

- Cabbage
- Brussels sprouts
- Kale
- Mustard greens
- Watercress
- Cauliflower
- Broccoli
- Collard greens
- Turnips

Here's a list of other liver-friendly vegetables to eat often:

- Legumes (or all types of beans, unless you are sensitive to them. If you develop gas or bloating, I recommend a product called Beano, which contains the enzyme alphasgalactosidase to assist in digesting beans.)
- Beets
- Carrots
- Dandelion root
- Dandelion greens

Cruciferous vegetables contain potent phytonutrients such as indole-3-carbinol, sulforaphane, and other phytonutrients, which aid the liver in detoxifying chemicals and drugs. Broccoli sprouts usually have the highest concentration of these phytonutrients.

## **Liver-Friendly Starches**

Some starches are better than others. These include:

- Brown rice
- Rice pasta
- Millet bread

- Amaranth
- Oatmeal and oat bran
- Wild rice
- Brown rice bread
- Quinoa
- Buckwheat

## **Starches to Shun**

Some starches tend to be much less liver-friendly. Starches to avoid are as follows:

- Wheat products, including breads, bagels, crackers, pasta, chips, and cereals
- Corn products

## **Liver-Friendly Fats**

Some fats are very good for your liver and for detoxification in general. Here's a list of them.

- Extra-virgin olive oil
- Avocados
- Raw, fresh nuts and seeds (avoid peanuts and cashews)
- Flaxseed oil (but never cook with this oil)
- Evening primrose oil
- Black currant seed oil
- Borage oil
- Pharmaceutical-grade fish oil

## **Beverages Are Important Too**

What you drink and how much you drink are just as important as what you eat. Here's a list of dos:

1. Drink plenty of alkaline water with fresh-squeezed lemon or lime (two quarts daily).
2. Drink fresh, juiced vegetables and fruits.
3. Drink green, white, or black tea and other herbal teas.

Drinking at least two quarts of alkaline water every day will help your kidneys eliminate toxins as well.

## **Powerful Detox Proteins**

For protein, fatty fish such as wild salmon is best. For more information, please read my book *Eat This and Live!* (Siloam, 2009).

Here's a list of powerful proteins for great detoxification. I recommend 2–3½ ounces protein for women and 4–6½ ounces for men.

- Wild salmon
- Sardines
- Tongal tuna
- Organic free-range, extra-lean chicken
- Organic free-range turkey
- Organic free-range, extra-lean beef (limit to once or twice a week)
- 1–2 organic pastured eggs (once or twice a week)

Having an occasional organic pastured egg will help supply the needed amino acids for Phase Two detoxification. Organic pastured eggs come from hens that are not caged and fed corn or other grains high in inflammatory omega-6 oils. Instead they eat grass, insects, and worms, and are higher in beneficial omega-3 fats.

## **The Golden Rule of Liver Care**

The Golden Rule is one of the most important rules for living with others. Here's the Golden Rule of liver care: *Don't overeat*. Only eat until you are satisfied and no more. Overeating places an enormous added burden on your liver and detoxification pathways.

If you tend to be an overeater, here are some pointers that can help. Fill plates and place them on the table at dinner rather than having everyone

serve himself country-style from bowls. This will help you to control portions, and it will help you to resist the temptation to eat more just because it's there in front of you. Bless the food and develop an attitude of gratitude. Eat slower. Chew your food slowly (thirty times) and rest between bites. Set your fork down between bites. Let your dining be an experience. Don't shovel food in nonstop like a starving man. Give your stomach a chance to find out how full it is getting before you give it more. It usually takes about twenty minutes for a satisfied or full signal to reach the appetite center in the brain to turn off the appetite. Plan a walk right after dinner rather than sitting and visiting at the dinner table, where you may be tempted to overeat. When you dine out, try not to be a charter member of the "clean plate club." Restaurant portions are too large for most people. Take half of those enormous portions home in a doggy bag for the next day, or split the meal with your spouse.

Let's turn now and look at some nutrients that are essential for your detox program.

## **Nutrients for the Liver**

The following supplements should be taken to strengthen and support your liver to prepare for a detoxification fast and when coming off of a detoxification fast.

### **A Good Multivitamin/Multimineral Supplement**

Taking a comprehensive multivitamin and mineral supplement on a daily basis is absolutely essential to promote effective liver detoxification. A good multivitamin will contain an entire array of B vitamins, which are especially important for Phase One detoxification. Let's look:

- Vitamin B1, or thiamine, helps decrease the toxic effects of alcohol, cigarette smoking, and heavy metal toxicity.
- Vitamin B2 is used by the body in the manufacture of glutathione.
- Vitamin B3 is used in detoxification and is required by Phase One detoxification.

- Vitamin B5 is required for Phase One detoxification and is important for synthesizing glucuronic acid and coenzyme A, which are very important in Phase Two detoxification. It also helps to detoxify acetaldehyde, which is produced from alcohol and by candida overgrowth in the intestines.
- Vitamin B6 is required for Phase One detoxification.
- Vitamin B12 is required for Phase One detoxification.
- Folic acid is required for Phase One detoxification.

A good rule of thumb is that each of the above B vitamins should be present in a dose of at least 100 percent of the daily value.

## Minerals

A comprehensive multivitamin and mineral will contain some absolutely essential minerals for detoxing. Here are a few:

- Zinc
- Copper
- Manganese

You should have about 15 milligrams of zinc, 2 milligrams of copper, and 2 milligrams of manganese. These three form the powerful antioxidant enzyme superoxide dismutase, which protects the liver against freeradical damage.

- Selenium
- Magnesium

I recommend 150 to 200 micrograms of selenium and 400 milligrams of magnesium a day. Selenium is part of the enzyme glutathione peroxidase, and it also acts as an antioxidant. It protects cell membranes from free-radical damage. Selenium also protects the liver from the toxic effects of heavy metals such as cadmium, mercury, lead, and arsenic. The daily recommended dosage for adult males and females is 55 ug.

Magnesium is a cofactor used in more than three hundred different enzyme reactions. Magnesium also helps to manufacture DNA for protein synthesis, fatty acid synthesis, and removal of toxic substances. Therefore,

it is critically important for the liver to have adequate amounts of magnesium so that the liver can continue to perform its other roles of protein, carbohydrate, and fat metabolism.

All of these vitamins and minerals listed above can be found in a comprehensive multivitamin. (See Appendix D.)

As you can imagine by now, antioxidants are extremely important in the vital work of your liver. Making sure you have enough of them is essential. Let's look.

## Antioxidants

### Glutathione

Before we talk about any other antioxidant, I want to stop for a moment and talk to you about glutathione. Glutathione is a 3-amino-acid peptide (or tripeptide) consisting of glycine, glutamine, and cysteine. You may not have heard of this powerful super-antioxidant, but in my opinion it is truly the master antioxidant and master detoxifier. When glutathione levels in cells drop too low, cell death occurs.

This is why glutathione is essential to the health of every cell in the body. It helps control inflammation, is critical for the immune system, boosts energy, and protects cells and tissues from free radicals, which protects you from disease.

Furthermore, glutathione is important for optimal function of the five most important organs in the body—the heart, lungs, brain, liver, and kidneys. Glutathione is also required for optimal function of the immune system and for maintaining healthy eyes. Glutathione is considered the most abundant and most important antioxidant in the human body.

Over ten years ago when I was first researching for this book, *Toxic Relief*, I was aware of the antioxidant glutathione as the master antioxidant and master detoxifier, but I simply didn't fully comprehend the importance, the power, and versatility of glutathione. In my opinion it is the Michael Jordan of antioxidants and detoxifiers in the body.

I really saw the power of glutathione in action about seven or eight years ago when I began to treat Parkinson's patients with IV glutathione. The first time I used IV glutathione was on an elderly gentleman with severe Parkinson's disease. This fellow had a resting tremor of his hands and arms; he was rigid like the Tin Man and had a poker face with no

expression. He would walk with a slow shuffling gait without any arm swing, similar to a zombie. He was stiff and rigid and would almost fall when I asked him to stop and turn around.

However, a few minutes after giving him IV glutathione I couldn't believe the change in him. He began to move his arms and legs easily and then began to run and jump. The tremors stopped, and he began to laugh as he became overjoyed to feel normal again. However, after a few hours he froze back up and became rigid, stiff, with no expression, and the tremors returned. I knew glutathione had a major impact on his body, but he needed a supplement that would raise his glutathione levels significantly long term, but unfortunately there was no such supplement at that time. Years later I started checking glutathione levels on many of my patients with chronic diseases and found that many of them had low glutathione levels and many had a mutation of their glutathione gene.

The good news is that your body produces its own glutathione. The bad news is that a poor diet, excessive stress, lack of sleep, disease, infections, toxins, pollution, medication, and aging all deplete your glutathione levels, leaving you susceptible to chronic disease, inflammation, accelerated aging, and cancer. In addition, the amount of toxins we're exposed to every day is usually far above and beyond what our normal body's production of glutathione is able to combat.<sup>1</sup> Our bodies were never expected to battle the onslaught of toxins, pesticides, chemicals, heavy metals, and other harmful substances we're now exposed to every day in our food supply, water, air, and environment.

Our glutathione levels decrease by about 1 percent per year after the age of twenty-one. The *Lancet* medical journal reported a study that showed the highest levels of glutathione in healthy young people, lower levels in healthy elderly, lower still in sick elderly, and the lowest levels of all in hospitalized elderly.<sup>2</sup>

What makes glutathione so effective and necessary? The secret of its power is the sulfur chemical groups (or sulfhydryl groups) in glutathione. Sulfur is a sticky, smelly molecule that acts like flypaper. Toxins stick to it and get trapped. In a body with a robust supply of glutathione, those toxins easily get trapped and then eliminated from the body. However, when glutathione levels in our bodies are low or become depleted, we can't effectively get rid of the toxins, and we can't effectively quench free-radical reactions. Thus we get a buildup of toxins and more damage to

cells and tissues from free radicals, eventually resulting in disease. Columbia University's school of public health stated that 95 percent of cancer is caused by a poor diet and excessive toxins.

Many patients with chronic diseases, including fibromyalgia, chronic fatigue syndrome, autoimmune disease, heart disease, diabetes, cancer, Alzheimer's disease, Parkinson's disease, liver disease, kidney disease, and chronic viral infections such as HIV, AIDS, chronic hepatitis C, and chronic Epstein-Barr virus have low glutathione levels. Many patients with chronic disease also have a mutation of the glutathione gene, so they don't and can't produce enough glutathione.

Thankfully, much research has been done to demonstrate the amazing effects of glutathione to protect and repair the body. More than ninetyfour thousand research articles concerning glutathione exist on PubMed alone! And this research is demonstrating that glutathione plays an important and beneficial role in treating such conditions as AIDS, Alzheimer's disease, cancer, Crohn's disease, chronic fatigue, chronic infections, diabetes, Down syndrome, heart disease, hepatitis, high cholesterol, kidney failure, male infertility, multiple sclerosis, Parkinson's disease, prostate problems, stroke, and so much more.[3](#)

Again, due to the level of toxicity on our planet today, even the healthiest individuals need help increasing the body's natural levels of glutathione. This, I believe, is the best and most important thing we can do to find toxic relief!

### ***Glutathione the master antioxidant***

Glutathione quenches free-radical reactions and is known as the master antioxidant. An antioxidant prevents oxidative damage by supplying electrons to prevent or repair oxidation and quench free radicals. A simple example of oxidation is when you slice an apple; after an hour or so the slices begin to turn brown. But if you squeeze lemon on the apple slices, the vitamin C in the lemon juice supplies electrons to prevent oxidation, so it takes much longer for the slices to turn brown. Researchers predict that we get between one thousand to one million free-radical hits per cell per day. Can you imagine someone hitting you one time on the shoulder or shooting someone one time with a BB gun? Now imagine getting hit one thousand times on the same shoulder or being shot one thousand times in the same place by a BB gun. However, smokers and people who work in toxic environments and eat foods high in sugar and toxic fats may be

getting closer to one million free-radical hits per cell per day. No wonder there is such a high risk of eventually developing cancer in smokers. Well, the good news is that if your glutathione levels inside your cells are high, they will quench most free radicals and recycle other antioxidants including vitamin C, vitamin E, superoxide dismutase (SOD), and lipoic acid; also, glutathione will recycle itself. Glutathione donates electrons to the overall antioxidant pool, which in turn reactivates the antioxidant so it can again do its job of donating electrons and quenching free radicals and preventing oxidation. Antioxidants are recycled in both water-soluble and fat-soluble components in the body. Glutathione is the master antioxidant that makes this possible.

### ***Glutathione decreases inflammation***

Inflammation is at the root of most chronic diseases, including cardiovascular disease, Alzheimer's disease, autoimmune disease, Parkinson's disease, arthritis, and asthma. Inflammation also decreases glutathione levels. But the good news is that simply increasing the production of glutathione helps to decrease inflammation in the body.[4](#)

### ***Glutathione increases energy***

The main complaint I hear in my doctor's office every day is, "Doctor, I'm tired." Does that sound familiar?

Adenosine triphosphate (ATP) is our body's energy currency, transporting chemical energy within our cells for metabolism, and is produced in the mitochondria of our cells. The mitochondria are the tiny energy factories in our cells. All cells have mitochondria; however, the fat cells have the fewest and heart muscle cells have the most. During ATP production in our mitochondria, two damaging free radicals, hydroxyl and peroxide, are produced and are potentially very damaging to our mitochondria.[5](#) This is why we need glutathione to quench the free radicals in the mitochondria, which in turn helps to increase ATP production and increase one's energy.

As we age, our mitochondria usually become more and more dysfunctional, and as a result, older individuals become more and more fatigued. One study found that when a ninety-year-old had a muscle biopsy, 95 percent of his mitochondria were dysfunctional. This simply means they were unable to produce adequate amounts of ATP. However, a muscle biopsy of a five-year-old child revealed minimal mitochondrial

dysfunction. Keeping glutathione levels at optimal levels will usually help prevent mitochondrial dysfunction and improve one's energy dramatically.

### ***Glutathione detoxifies the body of toxins and heavy metals***

Glutathione has the ability to bind most heavy metals, such as cadmium, lead, iron, arsenic, and mercury, and eliminate them from the body.<sup>6</sup> In fact, glutathione is the most critical part of the detox system of the body. Remember my description of glutathione as sticky flypaper? Most toxins, including many solvents, chemicals, pesticides, herbicides, fungicides, and heavy metals, stick to glutathione similar to a fly sticking to flypaper and are carried out of the body.

What's more, the damaging effects of radiation are repaired with glutathione.<sup>7</sup> Can you believe that? Glutathione is truly a super antioxidant and super detoxifier! Glutathione also strengthens the immune system.

As we age, we are more prone to develop viral and bacterial infections. Glutathione enables the immune system to function optimally and activates the natural killer cells that destroy viruses, bacteria, and even cancer cells. Our lymphocytes need glutathione in order to multiply and in order to develop a strong immune response. Chronic viral illnesses such as Epstein-Barr virus, hepatitis C, cytomegalovirus, and other chronic viral infections are associated with low glutathione levels. However, by simply boosting the glutathione level, many patients with chronic viral illness report dramatic improvement. Lymphocytes begin to proliferate and form natural killer cells and T cells as the immune system begins to function optimally.

## **WAYS TO BOOST GLUTATHIONE**

<b>Activity or Intake</b>	<b>Effect</b>
Cold showers daily or swimming 5-10 minutes per week in ice cold water	Raises glutathione about 20-25 percent
Undenatured whey protein	Boosts glutathione about 35 percent
Lipoic acid	Boosts glutathione about 30-50 percent
Milk thistle	Raises glutathione about 35 percent

N-Acetyl Cysteine	Raises glutathione about 85 percent but requires 8,000 milligrams a day
SAM-e	Raises glutathione levels about 50 percent
Other supplements (see Appendix D)	Raises glutathione about 267–292 percent

### **Vitamin C**

Vitamin C is also able to raise levels of glutathione. Minimally it is an excellent antioxidant for decreasing free radicals. In high doses, vitamin C is able to remove or chelate heavy metals such as mercury and lead.

During liver detoxification, take 250 to 1,000 milligrams of vitamin C, two to three times a day. However, if you begin to experience diarrhea, decrease the dose and then gradually increase it. The high dose is just for the 1–2 weeks of liver detox prior to your fast.

### **Lipoic acid**

Lipoic acid is a universal antioxidant that can penetrate water-soluble and fat-soluble compartments of the body and rid the body of water- and fat-soluble free radicals. Lipoic acid is also able to recycle both vitamin E and vitamin C, as well as enhance the antioxidant function of vitamin E, vitamin C, and glutathione. It has been used to treat heavy metal toxicity from mercury and lead. Lipoic acid has also been used in treating liver disease, and it protects the liver from the effects of alcohol. I recommend 100 milligrams of lipoic acid two to three times a day.

### **Vitamin E**

Vitamin E is a fat-soluble vitamin that prevents oxidation of lipids in cell membranes and other fatty structures. Oxidation of lipids occurs when fats react with oxygen, thus producing free radicals. I recommend 400 IU of vitamin E each day containing all eight forms of vitamin E.

### **Coenzyme Q10**

Coenzyme Q10 (CoQ10) is found throughout the body. It is sometimes called “ubiquinone” since it is ubiquitous, or everywhere. It is most concentrated in the heart. This powerful antioxidant protects cell membranes, cell structures, and other substances of the body against free-

radical damage. It also protects vitamin E from oxidative damage. Ubiquinol is the active form of CoQ10.

Coenzyme Q10 is very important in energy production in the cells. It has been used to treat cardiovascular disease, including congestive heart failure, cardiomyopathy, angina, and hypertension. Coenzyme Q10 may have a role in both cancer treatment and cancer prevention. It also helps to detoxify the body of medications and anesthetics. It is especially important for patients on statin medications to lower cholesterol since these medications lower CoQ10 levels also.

For detoxification, I recommend at least 100 milligrams daily with food.

Let's now look at bioflavonoids and investigate their importance to your program of detoxification.

## **Bioflavonoids**

More than six thousand different bioflavonoids exist. These are watersoluble plant pigments that pack a powerful health punch. The most important ones for detoxification are:

- Milk thistle (silymarin)
- Green tea
- Proanthocyanidins (pine bark extract and grape seed extract)
- Quercetin

Let's take a closer look at these.

### **Milk thistle**

Milk thistle extract, known as silymarin, is one of the most powerful protectors of the liver against free-radical damage. It also protects the liver from many different extremely toxic chemicals, including the poisonous mushroom amanita phalloides, which is actually fatal in 40 percent of the people who ingest it.

Milk thistle prevents the depletion of glutathione. Since vast amounts of glutathione can be expended in the detoxification process, it can lead to glutathione depletion. Milk thistle will prevent this depletion during detoxification. Milk thistle can actually raise the level of glutathione in the liver up to 35 percent.

Milk thistle is an important antioxidant to take during the detoxification fasting program, and it is part of the glutathione-boosting supplement in Appendix D.

Take 200 milligrams of milk thistle three times a day during detoxification, and drink milk thistle tea while fasting. After detoxification I recommend taking an ongoing dosage of 100 milligrams, two to three times a day, or take the glutathione-boosting supplement.

### **Green tea**

As an antioxidant, green tea is two hundred times more powerful than vitamin E and five hundred times more powerful than vitamin C. Green tea is believed to block the effect of cancer-causing chemicals. It also activates detoxification enzymes in the liver, which helps defend your body against cancer.

For detoxification purposes, I recommend one cup of green tea two to three times a day. If you prefer, you may take one 100-milligram capsule of green tea extract three times a day instead.

### **Proanthocyanidins**

Proanthocyanidins, a highly specialized group of bioflavonoids, are present in many plants. However, the highest concentrations are found in pine bark and grape skins and seeds. Pine bark extract and grape seed extract are powerful bioflavonoid antioxidants. They are twenty times more powerful than vitamin E as scavengers of free radicals. They work in water-soluble compartments of the body and move throughout the bloodstream.

These antioxidants are so powerful that they can inhibit the formation of one of the main carcinogens in tobacco smoke, which is benzopyrene. They also protect brain and nerve tissues and collagen from oxidation.

I recommend 50–200 milligrams of grape seed extract or pine bark extract per day for detoxification purposes.

### **Quercetin**

Quercetin is a powerful flavonoid that is found in green and black tea, red wine, garlic, tomatoes, onions, peppers (green and cayenne), broccoli, grapes, berries, and apples. It is a very strong antioxidant that prevents free-radical damage to cells from initiating cancer. It also helps to speed up the production of detoxifying enzymes that eliminate carcinogenic toxins from the body. Quercetin also has a potent antihistamine effect.

I recommend 400 or 500 milligrams twice a day.

## Amino Acids

The next group of nutrients for detoxification includes the amino acids.

### NAC (N-acetylcysteine)

NAC, also known as N-acetyl cysteine, is a stable form of the amino acid L-cysteine. NAC is easily absorbed by your body and easily converted to glutathione, so it increases the glutathione stores in your body. Approximately 60 percent of the toxins that are excreted in the bile are detoxified with the help of glutathione. That is why it is critically important to have plenty of it.

Glutathione supplements are very difficult for your body to absorb. But NAC supplements are easily absorbed and are much less expensive than glutathione. NAC is able to increase the production of glutathione.

However, too much NAC may act as a pro-oxidant and increase freeradical activity in healthy patients. During detoxification I recommend NAC, 500 milligrams, one to two times a day.

In my opinion, the best way to raise glutathione levels is to take a glutathione supplement in Appendix D that combines NAC, lipoic acid, milk thistle, quercetin, vitamin C, and L-glutamine.

### Glycine

Glycine is a nonessential amino acid, which simply means that the body produces it. It is critically important for certain Phase Two liver detox functions. In fact, it is the main amino acid used in a vital detox pathway.

People who suffer from excessive chemical exposure, hepatitis, arthritis, and alcoholic hepatitis, as well as many other chronic diseases, will need supplementation with glycine.

Glycine actually performs more biochemical functions than any other amino acid. It is also required for the synthesis of bile salts. Glycine is also one of the amino acid components for the manufacturing of glutathione, the other two being cysteine and glutamine.

Glycine is important in detoxifying many drugs and chemicals. If the body doesn't have enough glycine, then the toxins and chemicals may not be detoxified and will probably stay in the body much longer. This can create more free-radical activity and more damage.

Glycine is an inexpensive supplement that can be found in most health food stores. If you have one of the conditions listed above, take approximately 500–1,000 milligrams of glycine, two to three times a day between meals.

### **Glutamine**

Glutamine is an amino acid that is also important in the Phase Two detoxification of the liver. It is essential for anyone who drinks excessive amounts of alcohol.

Glutamine supplementation will also help decrease intestinal permeability, a common condition in which the small intestines become inflamed by alcohol, anti-inflammatory medications, aspirin, food sensitivities, bacterial overgrowth, or candidiasis. That inflammation causes the small intestine to become too permeable so that toxins and incompletely digested food particles can be absorbed from the GI tract directly into the blood and go to the liver. This puts an increased workload on the liver and further depletes it of detoxifying enzymes and antioxidants. Glutamine also helps to raise levels of glutathione in the body. Glutamine, cysteine, and glycine are converted into glutathione, which is the most important antioxidant and protector of the liver.

Take glutamine in a dose of 500–1,000 milligrams two to three times a day, usually thirty minutes before meals during detoxification. If you take one of the glutathione-boosting supplements, it is unlikely that you will need other detox supplements. (See Appendix D.)

## **Lipotropic Supplements**

Lipotropic supplements are needed to promote the flow of fat and bile from the liver. Let's take a look at some of these.

### **Phosphatidyl choline (or lecithin)**

Phosphatidyl choline (lecithin) is one of the best supplements to thin the bile so that toxins and chemicals can flow out of the liver more readily. Lecithin is composed of choline, inositol, and linoleic acid. Choline is the main nutrient in lecithin. Choline is also found in egg yolks, soybeans, grains, and nuts. By improving the flow of toxic bile from the liver during detoxification, one will be protecting the liver also.

Phosphatidyl choline also helps to break down fats and helps to detoxify a fatty liver. Take 1–2 tablespoons of lecithin two to three times a day in water or five capsules of phosphatidyl choline one or two times a day during detoxification. You can take it in capsule form or liquid form.

### Beets

The last lipotropic nutrient I would like to talk about is beets. Beets contain betaine, which promotes the flow of fat and bile from the liver. Betaine also protects the liver from the toxic effects of alcohol.

Betaine helps to prevent the buildup of homocysteine, which is the very toxic intermediate substance produced if you have a deficiency of the B vitamins folic acid, B<sub>12</sub>, and B<sub>6</sub>.

Eat beets regularly to cleanse and support the liver, especially during detoxification, and juice beets while fasting. You may also take a beet juice extract. (See Appendix D.) Dandelion root, artichokes, and radishes are also important for promoting the flow of bile; these may be juiced.

## Herbs for Detoxing

Several herbs are very important for cleansing the liver. These include dandelion root, burdock root, red clover, ginger root, and nettles. You can purchase teas made from these herbs to drink for liver cleansing. You can find dandelion root tea in most health food stores.

## Summarizing Main Supplements

- Comprehensive multivitamin/mineral (such as Divine Health Multivitamins)
- Active forms of the B vitamins (see Appendix D) to assist Phase One and Phase Two of detoxification of the liver
- Glutathione-boosting supplement (combination of NAC, milk thistle, glutamine, lipoic acid, quercetin, and other ingredients; see Appendix D)
- Milk thistle (present in above supplement)
- Amino acids (NAC is the most important and is present in the glutathione-boosting supplement)

- Lipotropics—phosphatidyl choline (lecithin) and beets
- Detox teas, dandelion tea

See Appendix D for ordering above supplements.

\* For more information on this, refer to my book *Living in Divine Health* (Siloam, 2006).

## Chapter 9

### “ELIMINATE THE NEGATIVE”

SEVERAL YEARS AGO, A PETITE YOUNG WOMAN NAMED BETTY \* CAME to my office. She had the worst case of toxicity I’ve ever seen in a cancerfree person. Her skin was ashen gray. Her long, light brown hair was thin, dull, and as brittle as straw. Dark black shadows encircled her sunken, lifeless eyes. Her body looked swollen and puffy, and she complained of feeling absolutely awful and tired all the time. Although only twenty-eight years of age, she was in quite a lot of pain from rheumatoid arthritis and looked much older than her age.

I realized in just a few minutes of examining her that if she didn’t begin to detoxify, she’d probably be back to see me with possibly another autoimmune disease, cancer, or some other degenerative disease.

As I questioned her about her lifestyle, Betty painted a picture of a fairly ordinary American diet. It was unhealthy, centered on pizza, Big Macs, sodas, and fries with very little fruit and vegetables. She drank little water and instead polished off an entire pot of coffee every day, which she prepared with lots of sugar and heavy cream. She was, no doubt, somewhat dehydrated. But even this awful diet couldn’t totally explain her toxic state.

I probed further, asking about the functioning of her GI tract and colon. As she shared her story, I began to understand why she was so ill.

She traveled often, and each time she left town she’d become a bundle of nerves. As a result, her colon would seemingly just stop. She would go for days on end without a bowel movement—sometimes for an entire week.

Because of her diet of fats and refined sugar and her lack of adequate water and fiber, her food would sit in her colon while many of the dangerous toxins in the stool were reabsorbed back into her body. She was in trouble from toxicity, and if she didn’t begin to have daily bowel movements, she would eventually be even sicker. This young woman desperately needed toxic relief.

This woman’s toxicity wasn’t due to her liver. As a matter of fact, her liver seemed surprisingly strong considering the state of her health. No,

her toxicity was mainly a result of an unusually slow and poorly cared for intestinal tract.

This young woman's condition is not at all uncommon, which is why we must carefully examine the main avenue for elimination, which is the intestinal tract or small intestines and colon.

Finding toxic relief is a little like the old song that tells us we have to "eliminate the negative." In order for your body to efficiently eliminate its toxic buildup of chemicals, toxic fat, and other poisons, you must first get your intestinal tract in top condition. Without both a healthy, wellfunctioning liver and a healthy intestinal tract, your body will continue to labor under a dangerous burden of toxins.

The liver processes and detoxifies the toxins. However, the intestinal tract is responsible for removing the majority of the toxins. The liver excretes the toxins through the bile. If the bowel function is sluggish or if there is insufficient fiber in your diet, the toxins will usually be reabsorbed by the intestines and further burden the liver and entire body with excessive toxins.

Before you start this program of detoxification, you will need to get your colon in shape. So, let's get started.

## **Your First Line of Defense**

Every team has a first-team player who seems to dominate the game while others sit on the bench waiting for their special skills to be called upon. Your intestinal tract never sits out the game. It is definitely a powerful player in your defense against toxicity.

It's important to have a good understanding of how this amazing system works. Let's look.

## **A Look Inside**

Imagine that your skin suddenly turned to glass so that you could see everything going on inside of you. You would quickly see that your intestinal tract is, stated simply, a long tube. As a matter of fact, it is a continuous tube that's more than twenty feet long. It connects your entire digestive system together. Your food enters the tube on one end and exits on the other.

In between, your food undergoes a miracle of processing. The mouth starts the process and connects with the esophagus. The esophagus connects with the stomach. The stomach connects with the small intestines. The small intestines connect with the large intestines, and the large intestines connect to the rectum, and finally end at the anus. If digestion and elimination proceed smoothly and unhindered, then toxins are eliminated daily, and good health is achieved.

## **Digestion and Toxicity**

Poor digestion and elimination, as in Betty's case, is one of the main causes of toxicity in your body. Digestion actually begins when your brain signals that your body needs food. For instance, it's nearing lunchtime, and you start thinking about the wonderful colorful salad and whole-grain sandwich that you packed yourself for lunch. Your brain signals your digestive tract to begin producing the necessary enzymes and components for digestion.

The next step occurs when you smell and see food. You open your lunch box and smell the delicious salad and sandwich, the fresh garlic and parsley. Your mouth begins to water. Sight and smell stimulate your salivary glands to produce saliva. Saliva contains the enzyme amylase, which breaks down starches.<sup>1</sup> Saliva contains epidermal growth factor, which is produced in the salivary glands. It helps to stimulate the growth of cells in the liver.

The sight, smell, and taste of the food trigger the process of digestion so that the stomach is prepared when the food arrives. The digestion of food in the stomach usually takes between one and four hours. A healthy stomach has a pH between 1.5 and 3.0 due to hydrochloric acid, which is secreted by the stomach. Hydrochloric acid is strong enough to burn a hole through the carpet or to melt the iron in a nail. You can see how this powerful acid forms the first line of defense against bacteria, parasites, and germs. Its acidic pH makes it a strong sterilization system against such invaders from our food.

You've enjoyed chewing and swallowing your satisfying salad and sandwich. It has traveled to your stomach where this powerful acid breaks it down.

## [Diluting Your Stomach Acid](#)

It's important that stomach acid retain its full strength. However, many people dilute this acid by chewing their food only a couple of times and washing it down with a giant gulp of ice-cold soda or iced tea.

Cold foods and cold beverages decrease circulation in the stomach and intestines and slow down the digestive process. Cold drinks also wash out digestive enzymes. Ideally, it's best to drink your beverages about thirty minutes before eating a meal. The best beverage to consume is alkaline water at room temperature. You may drink 4 to 8 ounces of water with a meal.

Poor posture also affects digestion. While eating, try to sit up straight to take the weight and the burden off the digestive tract.

Stress also affects digestion by shunting blood away from the GI tract to the muscles to fight or flee. As a result one typically has impaired digestion due to inadequate secretion of hydrochloric acid and pancreatic enzymes. Medications for acid reflux also affect digestion by decreasing HCL secretion. (See my book *The Bible Cure for Heartburn and Indigestion*.)

## [The Path Your Food Travels](#)

Now, your digested salad and sandwich leave your stomach. It exits in a semi-liquid food form called *chyme*. Then it moves into the small intestine, which measures about eighteen to twenty-three feet in the average adult. That is about four times longer than you are tall.

The small intestine is divided into three sections. The *duodenum* is the first area of the small intestine that receives the partially digested salad and sandwich from the stomach. Then your lunch travels to the *jejunum*, where most of the nutrients are absorbed into the blood. Your delicious and nourishing sandwich completes its visit in the small intestines in the *ileum*, the third and final portion of the small intestines. Here the remaining nutrients from your lunch are absorbed before it moves into the large intestines.

For the nutrients from your lunch to be absorbed into your body, they must first come in contact with a sea of special cells in your intestines. These cells contain thousands of tiny fingerlike projections called *villi*.

About twenty thousand villi are found on every square inch of your small intestines. These little fingers sway back and forth constantly, stirring up your now liquefied lunch to remove its nutrients.

Your sandwich has now been broken down into such small particles that they can pass into the villi, where they can be taken up and absorbed by very small blood vessels called capillaries. These capillaries transport your lunch to your liver. All the nutrients from your sandwich are absorbed through the intestinal walls. Minerals are absorbed mainly in the duodenum. Carbohydrates, proteins, and water-soluble vitamins are absorbed mainly in the jejunum, and fat and fat-soluble vitamins are absorbed mainly in the ileum.

## Getting Rid of the Waste

Now your sandwich can be used to fuel your body in the many thousands of wonderful ways in which the vitamins, minerals, and other nutrients it contains can do. But if you've ever built a fire in your fireplace or driven behind a bus, you know that fuel cannot be burned without also creating smoke, or waste products. Your body's elimination is similar in that the intestine absorbs nutrients and excretes the waste.

The waste products of this process are then propelled mainly into the colon. There they usually remain for one to two days, and in some patients seven days or longer. They are then expelled by a bowel movement. The last few inches of the colon make up the rectum, which is a storage site for solid waste. The waste is then expelled through the anal opening.

The first half of the colon absorbs the fluids from this waste and recycles them into your bloodstream. The second half of your colon condenses the waste into feces. It also secretes mucus, which binds the substances together and lubricates them to protect the colon and ease its passage.

There you have it! The entire GI system of taking in the nutrients your body needs and excreting the waste.

Of the two to two and one-half gallons of food and liquids taken in by the average adult each day, only about twelve ounces of waste enter into the large intestine. Feces is made up of about three-quarters water. The remainder is protein, fat, undigested food, roughage, dried digestive juices, and cells shed by the intestines along with dead bacteria.

When this system of expulsion works quickly and efficiently, toxins are expelled without the opportunity for your body to reabsorb them. But when your diet is made up of too many refined sugars and processed foods, you can throw this amazingly efficient process into a tailspin. Toxins can actually sit in your colon for days on end where they are constantly being reabsorbed by your body. When this situation occurs over a long period of time, your body, and especially your fatty tissues, can become overburdened with toxins.

## **Natural Diet vs. American Diet**

Years ago, Dr. Dennis Burkett, a famous English physician, examined the digestive differences of rural Africans who ate a natural, fiber-rich diet that was packed with fresh fruits and vegetables, complex carbohydrates, and little meat. He compared the diet of the naval officers whose diet was basically meat, white flour, and sugar, similar to the basic American diet.<sup>2</sup>

The Africans had large, effortless stools approximately eighteen to thirty-six hours after they ate. In comparison, the English naval officers experienced small, difficult, compact, hard stools seventy-two to one hundred hours after eating.<sup>3</sup>

The naval officers also developed hemorrhoids, anal fissures, varicose veins, diverticulitis, diverticulosis, thrombophlebitis, gallbladder disease, appendicitis, hiatal hernia, irritable bowel syndrome, obesity, high cholesterol, coronary artery disease, high blood pressure, diabetes, hypoglycemia, colon polyps, and colon and rectal cancers.

The Africans only experienced these things after they converted to a British diet consisting mainly of meat, white flour, and sugar.

As you can see, what you eat makes all the difference in the world when it comes to healthy and efficient GI elimination.

Not only does diet play an enormous role, but also your GI tract must face challenges from many other factors that can significantly influence how well it digests and detoxifies your food. Let's take a look at a few of them.

## **What's Affecting You?**

The efficiency of your GI tract is being challenged every day. One of those challenges comes from a deficiency of those incredibly powerful digestive juices.

If you're over fifty years old, you may be among the many middle-aged individuals who begin to experience a reduction in the hydrochloric acid that is so essential to digestion. When the levels of this acid become depleted, digestive problems follow.

If stress plays a major role in your life, you probably don't need me to tell you that it affects digestion. It's not unusual for stressed-out individuals to have acid-suppressing medications strewn all around their workplace and car.

If you are stressed, you are probably not only deficient in hydrochloric acid, but you may be deficient in pancreatic enzymes as well. The lack of these vital pancreatic enzymes causes poor digestion of proteins, fats, and carbohydrates. When this happens, bits of partially digested food can putrefy and travel through your GI tract, leading to bacterial overgrowth in the small intestines, food allergies, food sensitivities, and so forth.

As you can imagine, food that is not completely digested creates an onslaught of problems for your body. An enormous stream of dangerous toxins is created that can overload and overwhelm your liver. Partially digested proteins can be absorbed directly into your bloodstream, causing disturbing food allergies or sensitivities. Partially digested food particles also may lead to the overgrowth of unfriendly bacteria, which may produce endotoxins and other dangerous toxins in the GI tract.

### **Relax . . . Breathe . . . Take a Minute**

Don't eat when you're stressed. Before you pick up your fork, take a brief moment to relax a bit. It's extremely important. If you tend to eat on the run or when you're upset, angry, or fearful, such negative emotions will have an effect. They will stimulate the sympathetic nervous system, which will result in a decreased secretion of hydrochloric acid. This, in turn, reduces your secretions of pancreatic enzymes, making it very difficult to digest food.

Therefore, when you sit down to eat, take time to thank God and to meditate on all His goodness and provision. Release any negative emotions, bless the food, and then begin to eat.<sup>4</sup> Chew your food

thoroughly. This is important. Each bite should be chewed twenty to thirty times to mix enough saliva thoroughly with your food.

## **Overloading**

When your computer gets overloaded with files, programs, and unnecessary junk, what happens? It goes slower and slower until it finally stops working altogether. Your GI tract may do a similar slowing down.

When people overeat and stuff themselves until they are full, they put an enormous strain on the digestive tract. And it's even worse if you overeat late at night before bedtime when the digestive system needs to rest.

## **Intestinal Permeability**

The small intestine functions as an organ of digestion and absorption. It also functions as a barrier to keep your body from absorbing toxic materials and large molecules of undigested food.

A healthy small intestine allows absorption of some substances—such as triglycerides from the digestion of fats, sugars from the digestion of carbohydrates, and amino acids and di- and tri-peptides from the digestion of proteins. But it seals out compounds that would likely cause harm, such as partially digested bits of food, toxins, and heavy metals.

Nevertheless, if you consume too much alcohol or if you take antiinflammatory medicines or aspirin, they can irritate and inflame the lining of your intestines. This can lead to microscopic openings and holes in the small intestine. These holes will allow partially digested foods to pass directly through the intestinal wall into the bloodstream. This is called increased intestinal permeability.

It can also cause food allergies or food sensitivities, inflammatory bowel disease such as ulcerative colitis, Crohn's disease, celiac disease, rheumatoid arthritis, psoriasis, schizophrenia, and chronic skin problems.

Increased intestinal permeability allows undigested or partially digested food molecules, bacteria and bacterial toxins, yeast, yeast toxins, heavy metals, and food antigens as well as other toxic substances to leak into the bloodstream. These toxins are then free to go directly into the liver. There, they wreak havoc, undermining detoxification and triggering the release of

free radicals, which may damage the liver as well as other organs and tissues throughout the body.

## **The Effects of Food Allergies**

A main cause of increased intestinal permeability is food allergies and sensitivities. Common food allergies include allergies to egg, dairy products, corn, wheat, peanuts, fish, shellfish, soy, etc. Gluten—found in breads, crackers, pasta, all kinds of flour such as rye, barley, and wheat, gravies, and many soups, breadcrumbs, pies, and cakes—is one of the most common proteins people are sensitive to and especially patients with irritable bowel syndrome.

## **Watch for These Symptoms**

Increased intestinal permeability is usually present in the following diseases: chronic fatigue, fibromyalgia, migraine headaches, eczema, hives, psoriasis, Crohn's disease, ulcerative colitis, celiac disease, irritable bowel syndrome, rheumatoid arthritis, lupus, schizophrenia, autism, and attention-deficit hyperactivity disorder.

If you suspect this might be an issue for you, get a food sensitivity test. (See Appendix D.) If you are sensitive to gluten, select another form of grain for your daily diet, such as brown rice bread, millet bread, quinoa, kamut, or amaranth. Buckwheat is also gluten-free, so you can still have buckwheat pancakes.

## **Repairing Your Intestines**

To repair your small intestines, you must improve your digestion. You should also reinoculate the bowel with friendly bacteria. (We will discuss this later.) Bowel transit time must be improved. Decrease stress, especially when eating, by eating in a relaxed, peaceful atmosphere.

Do this on a regular basis daily. Vegetarians usually have a healthy GI tract, but most Americans do not and are in a desperate need for repair of the GI tract.

## **Supplements to Help Repair the GI Tract**

L-glutamine is an amino acid used to feed the cells of the small intestines. I recommend taking 500–1,000 milligrams of L-glutamine thirty minutes before eating your meals for at least three months if you have increased intestinal permeability. They can be found at any health food store. If you have Crohn's disease, colitis, celiac disease, and so forth, you may need to take this for a year or longer. To find out if you have increased intestinal permeability, see a nutritional doctor or have your doctor order Intestinal Permeability Testing. (See Appendix D.)

Zinc carnosine is a combination of zinc and L-carnosine and was developed in Japan to treat ulcers. It has also been found to be very effective in repairing a leaky gut and easing GI inflammation. I usually recommend one tab containing 16 milligrams of zinc and 75 milligrams of zinc carnosine two times a day between meals. (See Appendix D.)

Another nutrient that is extremely effective to the GI tract is gammaoryzanol. This is found in brown rice. Eat plenty of brown rice, brown rice bread, rice bran, or rice bran oil. Or you may take gammaoryzanol in pill form, 100 milligrams three times a day. Again I recommend the tablet thirty minutes before meals for three months, or just eat plenty of brown rice.

DGL is actually a kind of licorice that helps to heal the GI tract. It is best to take a chewable form (approximately 380 milligrams) three times a day, thirty minutes before meals.

Finally, aloe vera juice soothes the lining of the stomach and intestines. It can be taken several times during the day.

For the majority of patients, L-glutamine, 1,000 milligrams, or one to two tablets thirty minutes before meals for three months, is adequate to repair the GI tract. The other supplements should be added if you are not improving. After identifying the foods you are sensitive to, then remove these foods from your diet for six weeks and rotate the other foods by choosing different foods every day for four days and then start over. Eating the same food every day such as dairy, wheat, and eggs is a major reason people develop food sensitivities. (See Appendix D for Food Sensitivity Testing.)

In addition, stop drinking alcohol, avoid aspirin, and avoid antiinflammatory medicines such as Advil. Identify all your food allergies and avoid those foods or follow a rotation diet.

The intestinal lining is one of the fastest healing tissues in your body. As a matter of fact, it can be replaced approximately every six to ten days. For more information on this topic I recommend my book *The Bible Cure for Candida and Yeast Infections*.

## **Good Bacteria, Bad Bacteria, and Yeast**

About a hundred trillion bacteria reside in the large bowel, weighing in at about three pounds. More than four hundred different species of bacteria live there. Fortunately, most of these bacteria are extremely beneficial; you wouldn't want to try to live without them. They are responsible for many different functions, such as synthesizing vitamins and breaking down toxins. They also digest fiber by changing it into short-chain fatty acids that provide the main nourishment for your colon's cells.

## **Bacteria and Your Immune System**

Believe it or not, most of your entire immune system—about 60 percent—is located in the lining of the small intestines. Good bacteria improve your immune response. Bad bacteria, of course, do not. So there's a very delicate, extremely important balance of power that must be maintained at all times.

It's really not much different from the balance of power that exists between the branches of our government.

The US Supreme Court, the president, and the Congress all share the power in our country. The system is set up so that no one branch is more powerful than the others. This careful and delicate balance has made it possible for us to enjoy the most powerful and influential government system in the entire world. But what would happen if an evil president got into office and decided to take over the military and overthrow the other two branches? We'd have anarchy, and our form of government would be destroyed.

Well, when bad bacteria and yeast overrun the balance of government in your GI tract, anarchy and chaos reign in your body, and this sets the stage for disease.

This kind of chaos can happen with repeated or prolonged use of antibiotics. Overuse of antibiotics kills the harmful bacteria, but it kills

the good bacteria too. Under normal conditions, good bacterial colonies, bad bacterial colonies, and yeast colonies exist together in a balance of power. Both the yeast and bad bacteria are held in check by the good bacteria.

But when overuse of antibiotics kills both the good and bad bacteria, the yeast can start to grow so rapidly in the small and large intestines that the yeast grows out of control. Yeast overgrowth may be associated with many different diseases and symptoms such as psoriasis, eczema, irritable bowel syndrome, hives, diarrhea, bloating, gas, and other symptoms.

If you use antibiotics too often or for too long, eventually the bad bacteria in your intestines may actually become resistant to them. When this occurs, bad, or pathogenic, bacteria may also grow out of control.

When these bacteria run rampant in your body, they can create poisons called endotoxins that can damage and destroy the protective coverings (membranes) of cells. This leads to even more leakage of food across your intestinal lining, resulting in more food allergies and sensitivities, liver toxicity, and eventually systemic disease.

## **Counterfeit Proteins Running Amok**

This overgrowth of dangerous pathogenic bacteria in your intestines can also fool your system and wreak untold damage. It does this through “antigenic mimicry,” which is simply when proteins from intestinal bacteria are absorbed right into the bloodstream by increased intestinal permeability. The intestinal bacteria have proteins that appear to the immune system as being very similar to human protein. That’s why it’s called mimicry. These bacterial proteins actually mimic or counterfeit true proteins.

That may not seem so dangerous to you, but these proteins were never meant to enter directly into your blood. Because these proteins are very similar to human protein, they may actually confuse the immune system into attacking itself. The immune system will finally recognize the proteins as counterfeit and form antibodies against them to destroy them, but because the proteins mimic human proteins, the antibodies also lead to inflammation of human tissue such as joint tissue.

## **Partially Digested Food**

Not only can the bacteria mimic true proteins, they can also cause fermentation in your small intestines—just the way that apple cider ferments. Have you ever bought a gallon of apple cider in the fall, only to have it ferment in your fridge? What happened to it when it did? It turned into an alcoholic beverage and released lots of gasses and other toxins in the process.

Think about two to three pounds or even more of bacteria overgrowth in your small intestines fermenting and causing the partially digested food to ferment and putrefy. This putrefaction creates substances called indoles, skatols, and amines, substances that can be measured in a urine indican test.

Bad bacteria also can produce enzymes that can break down your bile into toxins that can promote the development of cancer. Bacterial enzymes can also inactivate your own digestive enzymes, causing impaired digestion, malabsorption, diarrhea, bloating, and gas.

## **Finding Friendly Bacteria**

Good bacteria, or friendly bacteria, are the lactobacilli and bifido bacteria. These GI-friendly organisms preserve the balance of power and form the defense against the rampant overgrowth of bad bacteria and yeast. Therefore, they keep poisonous toxins at bay. Beneficial bacteria also help prevent damage to the lining of the GI tract, thus maintaining normal intestinal permeability. They also prevent the growth of bacteria that produce the dangerous enzymes that promote cancer. In addition, these friendly bacteria secrete chemicals that kill the bad, or pathogenic, bacteria.

Good bacteria, called lactobacillus acidophilus, are normally found in the small intestines. Bifido bacteria are normally found in the large intestines.

Foods for good bacteria, called fructo-oligosaccharides (FOS), are complex sugars that are found in high amounts in Jerusalem artichokes. FOS encourages the growth of the good bacteria and discourages the growth of the harmful bacteria. I recommend good bacteria daily, either in capsule or powder form, if one desires to keep a healthy GI tract.

## **Beneficial Bacteria**

If you are taking antibiotics, or if you have any of the symptoms of increased intestinal permeability, take at least fifty to two hundred billion colony-forming units of both acidophilus and bifido bacteria every day. (See Appendix D.)

If you have diseases associated with increased intestinal permeability, you should be on these supplements a minimum of three months and preferably indefinitely. Anyone who wants to maintain a healthy GI tract should take them regularly.

### **FOS**

In addition, take at least 1,000–3,000 milligrams a day of FOS to feed the friendly bacteria. Take these at the same time that you take the acidophilus and bifidus. It is best to take all of these between meals. (See Appendix D.)

### **Yogurt**

Many people believe that they can get enough beneficial bacteria from eating yogurt. However, many yogurts that claim they have live bacteria really do not. In addition, many yogurts contain lactobacillus bulgaricus, which lives in the intestines for only about two weeks. Therefore, I strongly suggest that you not try to rely on this method alone in supplying your intestines with friendly bacteria.

### **Lactobacillus plantarum and saccharomyces boulardii**

When you take antibiotics, you should also continue using supplements of lactobacillus acidophilus and bifidus with FOS for about a month after stopping the antibiotics.

If you must take antibiotics over an extended period of time, take lactobacillus plantarum for a month also. This is one of the few lactobacilli that are not killed by antibiotics. Take one or two capsules a day. (See Appendix D.)

Saccharomyces boulardii (Sacro B) is a type of yeast that is a probiotic for treating and preventing diarrhea, including traveler's diarrhea, infectious diarrhea, and diarrhea caused from antibiotics. Sacro B helps fight disease-causing pathogens in the GI tract, including bacteria and yeast. I recommend one or two capsules of Sacro B in the morning on an empty stomach.

## **Parasites That Plunder**

Imagine having a large tick attached to your arm that continually sucks the blood out of your body. It lives there constantly, sapping your strength and injecting poisons into your skin that make you ill. On a molecular level, that's what microscopic parasites do.

If you think that the only people who get parasites are those who travel and live in exotic, third-world countries, you're wrong. Fact is, you may have parasites living inside your body right now!

There are three classes of parasites. Parasites are simply microorganisms that live off their host (you) and eventually cause damage to the host. Parasitic infections are fairly common here in the United States. In fact, the majority of the population of the world is colonized with parasites. That means you probably have had them at some time in your life and may have them right now. Let's take a look at these unwelcome visitors.

### [The protozoa](#)

Three main groups of parasites exist. The first are one-celled organisms called protozoa. They include amoebas, giardia, cryptosporidium, and blastocystis.

Giardia thrives in many of the lakes and streams throughout the United States, and it is often blamed for small outbreaks of diarrhea. When ingested, this parasite takes up residence in the small intestine, creating damage that leads to increased intestinal permeability. In fact, giardia can so damage the small intestine that, even after it has been eradicated, it can take months to heal. I had a giardia infection after skiing on a lake. Years ago, I went waterskiing with my son, Kyle, who is an excellent "wake boarder." I decided to give it a try.

I got out there on this little wake board and tried to get up, but it didn't work. My wife was driving the boat, and it seemed as if I were drinking the water in the lake instead of skiing. It was embarrassing. I tried again and again until I had blisters on my hands. I finally said, "Give me the skis!" My son still laughs about it.

About a week later I felt this little gurgle in my stomach. It became worse and turned into diarrhea. It would occur one day, be gone the next, and then it would return. Finally, I checked myself and found I had giardia, a microscopic parasite that lives in the small intestines. It is common in the lakes of Central Florida.

I treated myself with herbs, and the condition cleared within a few weeks.

In the 1990s the parasite *cryptosporidium* contaminated the water supply of Milwaukee, causing the largest epidemic of diarrhea in United States history. More than a hundred deaths occurred, and more than four thousand people developed diarrhea.

Blastocystis is another protozoa that commonly causes diarrhea. Other symptoms of being infested with this parasite include bloating and flatulence (gas).

Amoebas also cause diarrhea. They can so damage the lining of your intestines that they create leaky gut, burdening your liver.

### [The worms \(helminths\)](#)

The second group of parasites is classified as the helminths, which are worms. These include roundworms, hook worms, thread worms, tape worms, whip worms, and pin worms.

### [The arthropods](#)

The third group is the arthropods, which include ticks, mites, lice, and so on.

## [The Gift of Garlic](#)

If you suspect that you may be infested with parasites from your drinking water or other means, supplementing with garlic can help.

Garlic is a member of the allium family, which also includes onions, scallions, and leeks. Among these four, garlic contains the highest concentration of this powerful substance. Garlic has enormous powers to fight parasite infestations in your GI tract. It also kills bacteria, yeast, and viruses.

I recommend approximately 500 milligrams of garlic, two tablets, three times a day. You may take this if you have diarrhea that has persisted longer than a few days. If diarrhea persists, see your physician and have a stool specimen from three different stools examined for ova and parasites. Also have a giardia antigen test and a stool culture. (See Appendix D for comprehensive digestive stool analysis and parasitology.)

Other herbs, including oil of oregano, black walnut, artemesia, wormwood, pumpkin seed, cloves, and grapefruit seed, are beneficial for

parasitic infections. Many products have a mixture of the herbs listed above.

## **The Curse of Constipation**

As we saw earlier in this chapter, constipation is part of the price we pay in this society for our unhealthy diet. The pharmaceutical industry is making a fortune on our addiction to sugar and refined and processed foods and on our need for laxatives, antacids, and medications for bloating and gas.

Normal bowel transit time is approximately twenty to thirty hours. If your diet has plenty of fiber, your stools will be soft but formed. You will also have regular bowel movements—about one, two, or even three times a day.

A loose stool may indicate intestinal irritation. It could be caused by a bacterial or viral infection, increased intestinal permeability, food allergies or sensitivities, parasitic infections, yeast overgrowth, malabsorption, or poor digestion.

Normally, movements should occur about twenty to thirty minutes after eating. Under ideal circumstances, you should have one after every meal.

### **Laxatives**

Avoid using over-the-counter chemical and herbal laxatives, for these may lead to a dependency on the laxative. Osmotic laxatives such as magnesium sulfate, magnesium citrate, magnesium glycinate, and magnesium aspartate (or magnesium malate) are much safer alternatives. Many people are actually deficient in magnesium. Osmotic laxatives simply draw water into the colon and make the stool soft. They usually do not irritate the bowels.

### **Vitamin C**

Taking higher doses of buffered vitamin C can also prevent constipation as well as provide antioxidant protection. I recommend 500 to 1,000 milligrams of buffered vitamin C, two to three times daily, even when off the detoxification program. Everyone should take vitamin C, but those constipated usually need more. You may purchase this at any health food store.

### **Chlorophyll drinks**

A chlorophyll drink such as Divine Health Green Superfood contains wheatgrass, barley grass, alfalfa, spirulina, chlorella, and blue-green algae. These powerful foods are full of phytonutrients and magnesium, which help to cleanse the bowels and prevent constipation.

Take one scoop each morning. Mix it with pomegranate juice for a delicious energy drink. If you are constipated, you may drink it two times daily. However, don't drink it in the evening or too late in the afternoon, or it may give you too much energy and keep you awake. If you are still constipated, take all three supplements (magnesium, vitamin C, and Green Superfood) until the bowels are regulated.

### **Three Main Factors**

All of these supplements are very helpful for constipation, but equally important factors for regularity include the following:

1. Drinking enough water—at least two quarts of filtered or alkaline water a day
2. Regular exercise
3. A high-fiber diet with at least 30 to 35 grams of fiber per day

### **Fantastic Fiber**

Fiber is fantastic for your healthy GI tract. It acts like a broom, sweeping the colon lining, eliminating the toxins, and binding the toxins in the bile so that they cannot be reabsorbed back into your body. All of this activity is critically important in preventing disease. High-fiber diets also reduce the level of circulating estrogens by binding them and preventing them from being reabsorbed and recirculated through the liver.

Most of the chemicals that have been detoxified by the liver are contained in the bile, which is then dumped into the intestinal tract. This, as you know, is a major part of your body's detoxification process. But if your GI tract doesn't have enough fiber or is constipated, then much of that toxic bile will be reabsorbed back into your body. That's why it's so important to get plenty of fiber every day through your diet and to supplement with fiber regularly as well so that the toxins in your body will be bound and excreted. This will dramatically reduce your body's toxic burden. Let's take a look at this wonderful natural detoxifier.

## **Nature's Detoxifier**

Most of your fiber should come from your diet. Eat plenty of raw fruits, raw vegetables, whole grains, beans, legumes, and seeds.

Fiber comes in two varieties: water soluble, which means they can dissolve in water, and that which is insoluble in water. Foods high in soluble fiber include oats, oat bran, guar gum, carrots, beans, apples, ground flaxseeds, psyllium, and citrus pectin. Foods high in insoluble fiber include wheat bran, most root vegetables, celery, and the skins of fruits. Soluble fiber feeds the intestinal bacteria—especially the good bacteria. It also provides nourishment to the cells of the colon.

Intestinal bacteria cause soluble fiber to ferment and form short-chain fatty acids. This, in turn, nourishes the cells of the large intestine. These short-chain fatty acids help to prevent the growth of yeast and harmful bacteria. However, if you eat too much soluble fiber, such as too many beans or too much guar gum, you can develop an overgrowth of intestinal bacteria along with excessive bloating, gas, and abdominal discomfort.

Soluble fiber helps to lower cholesterol, control blood sugar, and create a sensation of fullness so that you will be less likely to overeat.

Insoluble fiber, on the other hand, inactivates many intestinal toxins. It also helps to prevent harmful bacteria and parasites from attaching themselves to the wall of your intestines by acting like a sweeping broom.

## **Fiber Foods**

Since both forms of fiber are very beneficial, I strongly recommend that you eat food that contains a mixture of soluble and insoluble fibers. Rice bran, oat bran, legumes such as beans and peas, apples, pears, and berries contain both sources of fiber.

I do not recommend wheat bran since so many people are sensitive to the protein in wheat (gluten). Gluten-sensitive individuals may also need to avoid oat bran if the oats are from a mill that also processes wheat or other gluten grains. If you suffer with increased intestinal permeability and food allergies, eat plenty of other rice bran, forms of fiber such as brown rice, ground flaxseeds, etc.

## **Microcrystalline cellulose**

Another excellent form of insoluble fiber includes microcrystalline cellulose. You can get this from a health food store or a nutritional doctor. Since many soluble fibers can produce bloating and bacterial overgrowth, I routinely use microcrystalline cellulose. Since it is an insoluble fiber and does not contain any wheat products, it tends to be well tolerated even by those with sensitive GI tracts.

### **Flaxseed**

Flaxseed, freshly ground in a coffee grinder, is one of the best ways to get your daily fiber. Simply put 1 to 2 tablespoons in a coffee grinder, and then pour the ground seeds into a smoothie or sprinkle it on your oatmeal, salad, or on any other food. It is good to take this two to three times throughout the day.

Flaxseeds contain lignans, which not only help to relieve hot flashes in menopausal women but also have antifungal, antibacterial, and antiviral activity. Lignan also blocks the activity of the enzyme that converts other hormones into estrogen.

### **Citrus pectin**

Another very important fiber is citrus pectin. It is a water-soluble fiber that comes from the cell walls of citrus fruits. Animal studies have shown that modified citrus pectin inhibited the metastatic spread of cancer. In one study, the metastatic spread of cancer was reduced more than 80 percent!<sup>5</sup> Citrus pectin also binds many heavy metals in the GI tract, including mercury, cadmium, arsenic, and lead.

The highest quality citrus pectin that I have found is PectaSol.

Take fiber each morning when you get up and again before you go to bed at night. Freshly ground flaxseed mixed with Green Superfood is one of my favorite ways to start a day.

## **In Conclusion**

Your amazing body is not only designed to detoxify itself but to heal itself as well. And just as you can play a significant role in helping and supporting your body's own ability to detoxify itself, you can also do the same with healing.

Let's turn and take a look at how detox fasting can play an exciting and powerful role in your body's process of healing.

## Summarizing Main Supplements

- L-glutamine, 1,000 milligrams thirty minutes before meals
- Probiotic, one to two in the morning on an empty stomach (See Appendix D.)
- Fiber such as ground flaxseeds, 1 to 2 tablespoons one or two times a day
- Green Superfood, 1 scoop upon awakening

\* Fictitious character

## Chapter 10

# FINDING HEALING THROUGH FASTING

AT THE AGE OF FORTY-TWO, REV. GEORGE MALKMUS LEARNED THAT he had developed colon cancer. Having watched his mother suffer and die from cancer, he determined he would not go the same route. Dr. Malkmus, a Baptist pastor, turned to his friend, evangelist Lester Roloff. Evangelist Roloff advised him not to go the medical route of chemotherapy, radiation, and surgery for his cancer, but to change his diet to raw fruits and vegetables and drink a lot of freshly juiced carrot juice. Malkmus took his advice and changed his diet from a diet full of meat and cooked, processed food with an abundance of desserts to a diet of raw fruits and vegetables with one to two quarts of freshly juiced carrot juice a day. In less than a year his tumor had disappeared.

Fortunately, George Malkmus discovered his cancer at a point where he was able to reverse it with nutrition and detoxification. Through diet and detoxification his blood pressure went down, his allergies vanished, and a host of other chronic complaints simply went away. That was more than thirty years ago. Today he remains as strong and healthy as ever and completely convinced that there is toxic relief.<sup>1</sup>

Unfortunately, not all cancers respond as his did. Therefore I recommend that patients use a comprehensive approach and seek medical opinions from both conventional medicine and nutritional doctors.

The story of George Malkmus is not uncommon. I believe that many diseases are the direct result of an excessive buildup of these toxins. I have seen this in patients with psoriasis, lupus, and rheumatoid arthritis.

Here are some other diseases that are often directly linked to a buildup of toxins:

- Food and environmental allergies
- Asthma
- Headaches
- Fatigue
- Fibromyalgia

- Chronic back pain
- Eczema, chronic acne, and other skin conditions
- Insomnia
- Depression
- Irritable bowel syndrome
- Decreased sex drive
- Menstrual problems
- Abdominal bloating
- Belching
- Gas
- Memory loss
- Chronic diarrhea
- Crohn's disease
- Ulcerative colitis
- Atherosclerosis
- Hypertension
- Obesity
- Constipation
- Angina
- Multiple sclerosis
- Coronary artery disease
- Cancer
- Mental illness
- Diabetes

Now remember, whenever you are sick or diseased, your body is signaling you that it is time to rest from work. With many diseases, it's also trying to tell you to rest from foods that are difficult to digest. So instead of drinking coffee and eating foods high in sugar and caffeine, which may help you to keep on working, take a lesson from the animals.

When animals are sick, they go to a secluded place near a source of water. There, they rest, drink water, and fast. Likewise, when we are sick with a temporary or chronic illness, we should also rest and fast with juices to nourish our bodies and support the liver as it works hard to detoxify from our illness.

Fasting does not only prevent sickness. If done correctly, fasting holds amazing healing benefits to those of us who suffer illness and disease. From colds and flu to heart disease, fasting is a mighty key to healing the body.

Let's turn now and look at some ways that fasting can be used to bring health and healing to a sick body.

## **For Colds and Flu**

Nothing is more miserable than getting a cold or flu. But did you know that the reason we suffer so much is because we do all the wrong things when we get sick? Drinking coffee and sodas and eating ice cream and pudding can make your flu or cold worse or prolong it.

When you come down with a cold or flu, fast by drinking plenty of water and fresh juices, and get lots of rest. This will help your system to expel toxic materials through the mucus it creates. Let your fever burn up your infection too. A fever actually mobilizes your immune system to fight infections. However, most physicians and parents are turning off the fever with Tylenol and depleting levels of glutathione, which I believe is our master antioxidant and master detoxifier. Don't rush to the doctor and take a lot of medications to halt the symptoms. Some of them are important for detoxification. However, if you have a fever over 103 degrees, you should be examined by a physician. If your fever is greater than 101 degrees and persists for longer than a few days, you should also be examined by a physician. For children, seek medical attention sooner.

Take plenty of vitamin C, garlic, elderberry, and herbs such as olive leaf extract and oregano as a natural means to help your body's immune response. An infrared sauna also helps to boost the immune system.

You can overcome many infectious diseases by eliminating mucusforming foods such as dairy products, eggs, and processed grains. These grains include pancakes, cereals, doughnuts, white bread, crackers, pretzels, bagels, white rice, gravies, cakes, and pies. In addition, cut out of

your diet margarine, butter, and other saturated, hydrogenated, and processed oils.

This “Mucusless Diet Healing System” was actually developed by Professor Arnold Ehret in the early 1900s.[2](#)

When you are sick, don't instantly turn to antibiotics. Antibiotics can provide powerful help when you are very ill with a bacterial infection. But the overuse of antibiotics can harm you and has created resistant strains of bacteria.

Let your body's own immune system be your first defense against infections. Overusing antibiotics may cause yeast overgrowth in the intestinal tract, (pathogenic) bacteria overgrowth in the intestinal tract, and an increased risk of developing altered intestinal permeability, as well as an increased toxic burden on the liver.

Many doctors prescribe antibiotics for colds and flus that do not even respond to antibiotics. If you have had a fever of 101 degrees for a few days, go see your doctor. But don't insist on getting an antibiotic unless he or she recommends it.

## **Fasting for Autoimmune Diseases**

Autoimmune diseases are simply diseases in which the immune system attacks itself. It is a process similar to a military disaster called “friendly fire.” A healthy immune system can tell the difference between normal cells and invader cells.

However, in autoimmune diseases such as lupus and rheumatoid arthritis, the immune system gets confused. It actually produces antibodies that attack its own tissues. This “friendly fire” inflames the tissues. Eventually it can damage and even destroy the tissue.

Rheumatoid arthritis and lupus are autoimmune diseases that are often linked to altered intestinal permeability. This can happen when you take too many antibiotics that decrease the numbers of friendly bacteria or if your intestinal tract has been damaged by anti-inflammatory medications, aspirin, or food allergies.

Another explanation for autoimmune disease is altered intestinal permeability along with poor digestion and increased consumption of meats. Most Americans eat lots of meat and other animal proteins. Meat eaters in the animal kingdom, such as lions, tigers, and other carnivores,

have digestive systems that secrete extremely large quantities of hydrochloric acid and enzymes. These animals also have relatively short digestive tracts.

However, humans are not so lucky. They do not produce nearly as much hydrochloric acid or digestive enzymes. In addition, our intestinal tracts are much longer. That means we aren't nearly as well equipped as lions to digest so much meat.

Combine this with the load of stress that most of us live under, stress that further reduces the amount of the digestive juices such as hydrochloric acid and pancreatic enzymes. It is no wonder we have an epidemic of bloating, gas, and indigestion! And the pharmaceutical companies are making a killing.

We eat far too much protein for the amount of hydrochloric acid and digestive enzymes we have. Therefore, our stomachs and intestines can't break down the proteins into the individual amino acids as well as they should. Incompletely digested proteins called peptides are formed that can be absorbed directly into the bloodstream if you have altered intestinal permeability. Your body may form antibodies to attack these foreign substances. Once again, the body may start to attack itself; if this happens, inflammation will occur.

Too much protein, poor digestion, and altered gut permeability are a recipe for autoimmune diseases such as rheumatoid arthritis and lupus. Such diseases are rare in countries where people eat mainly fruits, vegetables, and whole grains such as in Japan, China, and Africa. But when these same people come to the United States and adopt our diet, they begin to develop autoimmune diseases.

Fasting is one of the most effective therapies for treating autoimmune diseases—and the earlier in the course of the disease, the better. It's extremely important to wean yourself off all medicines, under medical supervision, before you fast. Fasting allows the digestive tract to rest. It also allows the intestinal tract to heal.

Juice fasting is very beneficial in autoimmune diseases. Nevertheless, some physicians have had outstanding results with water fasting. If you are going on a fast—especially a water-only fast—for an autoimmune disease, be sure your physician carefully monitors you.

If you have been taking Prednisone or other steroid drugs, it is extremely important to wean off these medicines slowly, under medical

supervision, prior to fasting; be sure to watch for signs of adrenal suppression. They include severe weakness and fatigue, rapid heart rate, and low blood pressure. It may take months to successfully wean off these medications.

After the fast, patients with autoimmune disease should decrease consumption of all animal proteins, dairy products, and eggs. It may also be helpful to avoid wheat products too. Instead, choose brown rice bread, rice crackers, spelt pasta, and other rice products.

## **Fasting for Coronary Disease**

Fasting is also very effective for the treatment of heart disease and peripheral vascular disease, which usually occurs in the legs. Peripheral vascular disease is simply a buildup of plaque or atherosclerosis, usually in the arteries of the lower extremities. Renowned researcher and physician Dr. Dean Ornish proved that coronary artery disease could be reversed with a vegetarian diet, stress management, and exercise.<sup>3</sup>

After only a year on this program, Dr. Ornish's patients had much less plaque in their arteries. If you have significant coronary artery disease or peripheral vascular disease (atherosclerosis in your legs), I recommend that you consider Dr. Ornish's complete program.

In addition, regular, periodic fasting will usually speed up the plaque removal process in the arteries.

While fasting, if you have significant coronary artery disease or peripheral vascular disease, you will find that your cholesterol levels will usually become more elevated on the fast. This happens because your body is in the process of breaking down plaque that is formed in the arteries, so don't be alarmed.

I always check the blood work before prescribing fasting for my patients. I'm always really encouraged when I see a dramatic elevation in cholesterol in those with coronary artery disease or peripheral vascular disease while fasting. I know that the fasting is doing its work and plaque is probably being broken down as atherosclerotic plaque is being removed while fasting.

## **Hypertension**

Do you have high blood pressure? One of the best ways to treat hypertension is to go on a juice fast. Before your fast, you should first

attempt to get off all diuretic medications under medical supervision. Increase the amount of water you drink to at least two to three quarts of alkaline water a day. Follow the directions for the detoxification fast outlined in this book and the instructions in my book *The Bible Cure for High Blood Pressure*.

## **Fasting for Psoriasis and Eczema**

I have found that many of my patients with both psoriasis and eczema suffer from numerous food sensitivities. They usually have increased intestinal permeability and impaired liver detoxification too.

It is critically important for those with both eczema and psoriasis to fast with juices to which they are not allergic. This is best done by choosing different juices each day over a four-day period and rotating your juices or by having food allergy testing first.

If you have eczema and psoriasis, you probably also have yeast overgrowth in your intestinal tract. If you do have yeast overgrowth, prior to fasting follow a candida diet for at least three months. For more information on this topic refer to my book *The Bible Cure for Candida and Yeast Infections*.

If you find that you do not respond well to a juice fast, you can try a balanced rice protein fast. This product is called UltraClear Plus PH. (See Appendix D.)

Water fasting can also be effective for psoriasis and eczema, but it must be closely monitored. If you decide to go on a water-only fast, supplement your fast with detoxifying teas such as dandelion and milk thistle tea and with a glutathione-boosting supplement. (See Appendix D.)

Before going on any fast for psoriasis and eczema, follow the program for improving intestinal permeability mentioned in chapter 5. I also recommend improving liver detoxification by taking the vitamins and nutrients outlined in chapter 9.

If you have psoriasis, you probably have significant increased intestinal permeability as well as an increased toxic burden on your liver. It is critically important to repair your GI tract and detoxify your liver. It is also extremely important to avoid foods to which you are allergic or sensitive.

If you don't know what foods you're allergic or sensitive to, have a comprehensive food allergy test taken. I have found that many of my patients with eczema and psoriasis commonly are sensitive or allergic to dairy, wheat products, eggs, tomatoes, peppers, or potatoes. This subject is discussed in more detail in my books *The Bible Cure for Candida and Yeast Infections* and *The Bible Cure for Skin Disorders*.

## **Fasting for Crohn's Disease and Ulcerative Colitis**

Fasting is very effective for patients with both Crohn's disease and ulcerative colitis. Again, those with these diseases usually have increased intestinal permeability, toxic overload on the liver, candida overgrowth, and numerous food allergies and sensitivities.

Many of my patients with Crohn's disease or ulcerative colitis are very sensitive to all dairy products, nightshades (including jalapeno peppers, potatoes, tomatoes, and eggplant), wheat products, and often to yeast-containing products as well. These individuals are generally extremely sensitive to all forms of sugar and especially fructose. Simple sugars should therefore be totally eliminated from the diet.

Due to their extreme sensitivity to sugar, these people do best on either a balanced rice protein such as UltraClear Plus PH or UltraClear Renew by Metagenics (see Appendix D) or on a water-only fast. Juice fasting with low-sugar vegetable juices and no fruits may be effective. However, juicing can aggravate the condition and lead to worsening of diarrhea. Probiotics are always recommended. (See Appendix D.)

Once your fast is over, continue eating rice products—primarily brown rice, brown rice bread, and rice crackers. Slowly reintroduce a low-protein, primarily vegetarian diet. In addition, keep a good food diary to find out what foods cause food sensitivities and avoid anything that irritates your GI tract and rotate your foods.

## **Fasting for Allergies and Asthma**

Juice fasting is extremely helpful if you have both allergies and asthma. Your lungs, as well as your entire respiratory tract, are vitally important elimination organs for removing toxins. Fasting often removes many of the irritants and toxins that trigger airway hyperactivity.

Allergies—both airborne and food allergies—usually dramatically improve during a fast. This is because of the close connection between allergies and intestinal permeability and liver toxicity.

Fasting gives the digestive tract time to rest and repair. It also helps the liver detoxify. Allergic symptoms are improved and sometimes completely disappear. However, it's important to be sure that you are not allergic or sensitive to any of the juices you'll be consuming. Keep a food diary while you're on your fast. Use it to help you avoid any juices that may trigger allergic symptoms or symptoms of asthma. You may decide to have food allergy testing.

## **Fasting for Type 2 Diabetes**

If you're a type 2 diabetic, fasting is for you. It's extremely effective for type 2 diabetics. However, type 1 diabetics should not fast.

Most individuals with type 2 diabetes also suffer from obesity. They usually have high insulin levels, but their cells have become resistant to the effects of insulin.

Type 2 diabetics may fast using vegetables that have a low glycemic index. Use a Vitamix blender so that you will retain the fiber and lower your blood sugar. Some diabetics may be able to juice low-glycemic fruits such as berries, Granny Smith apples, lemons, and limes without raising their blood sugar. They may fast using a well-balanced, high-fiber protein supplement called UltraGlycemX by Metagenics. (See Appendix D.)

It's also critically important for diabetics to follow a low-glycemic diet and an aerobic exercise program. For more information on diabetes, see *The New Bible Cure for Diabetes*.

## **Fasting for Obesity**

“The waistline is your lifeline. It is also your dateline,” according to Dr. Paul Bragg.<sup>4</sup> How true this statement is! Fasting is great for conquering obesity. With over two-thirds of the population of the United States either obese or overweight, we could all do a little more fasting.<sup>5</sup>

Obese individuals seem to be able to follow a strict diet for a period of time, but then they typically splurge and binge, eating all the wrong things. For some obese people, *diet* is a four-letter word. If you are one of

these individuals, I recommend a healthy eating plan and a healthy lifestyle, outlined in my book *The Bible Cure for Weight Loss and Muscle Gain* and Dr. Colbert's "*I Can Do This*" Diet.

Fasting for too long can actually cause you to gain weight over time, as I mentioned earlier. This is because it can lower your metabolic rate and predispose you to gain even more weight. But short, frequent juice fasts—about three days out of every month—when followed up with a healthy eating plan can bring obesity under control quickly and easily.

Periodic short fasts help you to crucify your flesh, which is a concept I will discuss at length in the following chapters. This crucifying of your unhealthy desires is the key to gaining control over your body, control that will last a lifetime.

When you begin to see your body as the temple of the Holy Spirit, you will gain a sense of respect for the incredible work of creative genius that your body represents. This understanding makes all the difference. Our bodies are the temple of the Holy Ghost, as we read in 1 Corinthians 3:16. The scripture goes on to say, "If anyone defiles the temple of God, God will destroy him. For the temple of God is holy, which temple you are" (v. 17).

It's written right into God's laws that we cannot destroy this temple without experiencing serious consequences. If we defile our bodies with sweets, fats, processed foods, and junk foods, then one day we will probably reap a harvest in the form of degenerative disease, heart disease, arthritis, diabetes, cancer, and hypertension. Whatever we sow, we will also reap.

Proverbs 23:21 says, "For the drunkard and the glutton will come to poverty." God actually puts the drunkard and the glutton in the same category. Many of us wouldn't dream of getting drunk, but we overeat frequently.

## **Fasting for Benign Tumors**

Undergoing the detox fasting program outlined in this book may also reduce the size of benign tumors and cysts. These include ovarian cysts, fibrocystic breast disease, lipomas, sebaceous cysts, and even uterine fibroids.

If you have advanced cancer, you should not fast. But fasting will definitely help you to prevent cancer.

## **When You Should Not Fast**

Although fasting is a healthful lifestyle that's as old as Moses, there are many times when you should not fast.

Do not fast if you are pregnant or nursing. You should not fast if you are extremely debilitated or malnourished, including patients with AIDS, cancer, severe anemia, or any severe wasting states. Do not fast before or after surgery, since it could interfere with your ability to heal after surgery.

In addition, don't fast if you have cardiac arrhythmia or congestive heart failure. Don't fast if you are struggling with mental illness, including severe depression, severe anxiety, schizophrenia, and bipolar disorder. These conditions can actually get worse when you fast. Individuals with severe liver and kidney disease should not undergo a fast.

As you know, I try to wean patients off most of their medications prior to a fast. However, medications such as hormone replacement therapy and thyroid medications are safe to take during a fast. If you are taking aspirin, anti-inflammatory medications such as ibuprofen or Aleve, Coumadin, diabetic medication, antidepressants, narcotics, chemotherapy medications, or diuretics, you should not fast.

You may continue taking very low doses of hypertensive medications during a fast as long as your physician closely monitors you. However, these should not include diuretics.

If you are taking Prednisone, you should be under a doctor's care to wean you off of this medication very slowly before fasting, or at least to the lowest effective dose. If you do not wean off Prednisone slowly, you could develop adrenal gland suppression with symptoms of rapid heart rate, low blood pressure, extreme fatigue, and susceptibility to infections.

When you are being tapered off Prednisone, I also strongly recommend that you take nutritional supplements with high doses of B complex, especially pantothenic acid, vitamin C, and adrenal glandular supplements. (Refer to my book *Stress Less*.)

For any fast longer than three days, I recommend getting a checkup or physical exam by your doctor first. Have him or her do blood work and a baseline EKG. I normally perform a comprehensive metabolic panel

(CMP). This includes kidney function tests including creatinine and BUN, electrolytes, liver function tests, blood sugar, cholesterol, and triglycerides. Along with the CMP, I also perform a CBC, urinalysis, and EKG. These tests should be performed prior to the fast. NOTE: Patients with a history of gout need to have their uric acid level checked before starting a fast, and if it is elevated, their doctor should adjust their dose of allopurinol so that the uric acid is in the normal range. I usually check the CMP with uric acid twice a week for patients with gout.

During the fast, I will usually perform a CMP and UA two times a week. During each office visit, tell your doctor if you are experiencing any severe weakness, fatigue, or light-headedness. Tell your doctor if you are having any irregular heartbeats. Again, if you develop an irregular heartbeat or pulse, you should be examined by your physician and should probably terminate the fast.

During a fast, it is critically important to make sure your blood potassium level remains in the normal range. Low potassium can cause dangerous arrhythmias and death. That's why it's critically important not to take diuretics on a fast. Juice fasting, however, supplies large amounts of potassium in the fresh-squeezed juices. That's why it's very unlikely that you will develop low potassium while on the juice fast. Water fasts are more likely to cause low potassium levels. Commonly, during a fast, the uric acid level is elevated. However, this is usually no cause for concern, since this is a normal response of the body to fasting, but continue to drink adequate amounts of water, two quarts a day.

If your physician cannot wean you off your medications, then it may be safer to start a partial fast. The partial fast uses fresh-squeezed fruit and vegetable juices, fresh fruit, veggies, brown rice, and other cleansing foods listed earlier in this book. Eat one or two meals a day of these cleansing foods, and then have one or two meals consisting of freshly squeezed juice.

Children under the age of eighteen should not follow a strict juice fast unless a physician closely monitors them.

You may experience improved health by fasting with juice on your first fast. However, usually you will have to fast repeatedly to detoxify the body and achieve vibrant health.

Fasting is a healthy, biblical way to cleanse your body and soul. As you've seen, it is a wonderfully natural method of healing. But don't wait

until you've become ill to begin fasting. Juice fasting is far better and more effective when you begin this lifestyle while you're still healthy. Every drink you take will be a drink to good future health!

## **In Conclusion**

I trust that you've discovered that one of the less-heralded wonders of your physical body is that it is an amazing, natural detoxifier. God created your body to quickly, cleanly, and efficiently deal with any toxin it may encounter. But in the toxic world in which we live, it takes more than a passive approach to health care to live long, healthy, active, disease-free lives. It takes wisdom.

I have presented the wisdom I've gained as a medical doctor. As you do your best to apply these truths, you will reap the wonderful reward of renewed energy, vitality, and health.

The power of better health through detoxification is yours. I encourage you to pursue your own good health aggressively by looking carefully at your diet and lifestyle. Your own healthy future is in your hands!

This discussion on fasting and detoxification would be incomplete if we left out the most important aspect of fasting and purification—fasting for the soul and spirit. For you see, the work of fasting doesn't stop with the physical body—fasting cleanses the total person. The greatest, most powerful work of fasting is its powerful ability to cleanse the soul. Let's look.

SECTION III  
DETOXING YOUR WHOLE PERSON

## Chapter 11

# SPIRITUAL FASTING—WHAT IT'S ALL ABOUT

NOT ONLY IS FASTING A POWER METHOD OF CLEANSING AND HEALING the physical body, but it is also a tool for cleansing the soul. Fasting is a key to genuine and deep spirituality. Throughout the ages, those who sought to know God and desired to enter into deeper spiritual realms and giftings employed fasting as a powerful and essential tool. Found throughout the Bible, fasting was considered a key part of entering into and maintaining a powerful and spiritually dynamic walk with God.

Two words are used in the Old Testament for *fasting*. One means “to cover the mouth,” and the other one means “to humble oneself.” In the New Testament, the word for *fasting* literally means “not eating.” The actual definition for *fasting* is “to abstain from food either partially or completely.”

To perform a biblical fast you must voluntarily abstain from food for a period of time—either partially or completely—for a spiritual purpose. During a spiritual fast, you deny yourself one of the most basic elements of survival, one that is loved and cherished by your body—food.

Just why would any one of us even want to consider denying our body the cookies, cakes, ice cream, hamburgers, and pizza it so much enjoys? The reason is that fasting, when accomplished through the direction and enabling of the Holy Spirit, has the power to break the gripping control of our lower nature.

Our fleshly appetite can be a ravenous animal, overpowering the spiritual man within us. When this happens, it “feels” impossible to say no to a craving for sweets, fast food—or even sex, gossip, or slander. These strong cravings and desires are a part of our lower, baser, or more animal-like nature. The Bible calls this appetite the “flesh.”

When the Spirit of God leads us to pray, but the flesh demands one more television program, we can find ourselves in the middle of an internal battle for control. Or when the bathroom scale tells us that we need to lose weight, but we find it woefully impossible not to reach for one more slice

of chocolate cake or bowl of ice cream, then we are encountering this powerful grip of our flesh. It has gained prominence over our mind, will, spirit, and emotions.

One way to break the power of your flesh and bring it under submission to your spirit and mind is to fast. Do you have an out-of-control temper that flares up at all the worst moments, damaging relationships with those you love? Fasting can bring that “flesh” under control.

Fasting feeds your spirit man while starving your natural man. It can soften your heart and cleanse your body to make you more receptive to God’s plans. Fasting can sensitize your spirit to discern the voice and internal promptings of God’s Spirit.

## [Gaining Control](#)

The Bible has much to say about our desires for foods that harm us rather than improve our health. For instance, Proverbs 23:1–3 says, “When thou sittest to eat with a ruler, consider diligently what is before thee: and put a knife to thy throat, if thou be a man given to appetite. Be not desirous of his dainties: for they are deceitful meat” (kjv).

In this passage, God warns us against gluttony and tells us not to be controlled by our cravings for pastries and other tempting foods that do not nourish our bodies. Verse 3 cautions not to lust after the king’s “dainties.” These “dainties” are delicacies, meaning they are probably high-sugar foods.

The term *flesh* in the Bible speaks about the cravings and desires of our bodies that we must conquer. These desires include the following:

1. Laziness and lethargy that keeps us from exercising
2. Cravings for sweets, processed starches, and fats that cause us to eat too much of all the wrong foods so that we end up piling on the extra pounds and never properly nourishing our bodies
3. Out-of-control emotions such as anger and rage that can send us into a frenzy in traffic or cause us to say hurtful things to our loved ones, which we later regret

Many more things come under the category of “flesh.” Flesh can involve our thoughts, emotions, desires for inappropriate sex, compulsion to binge out on sweets, inability to stop ourselves from gossiping, and much, much more. “Flesh” is nothing more than our needs, wants, and

cravings in their undisciplined state. This concept of the “flesh” will be important to us as I complete our discussion about detoxification.

Our flesh is ignorant. *Ignorant* is defined in Webster’s dictionary as “lacking knowledge.” Hosea 4:6 says, “My people are destroyed for lack of knowledge.” If your flesh rules you, you will actually be drawn to the very foods that will eventually destroy you.

## **The Destructive Power of Uncontrolled Desires**

It has been said that the quickest way to a man’s heart is through his stomach. It was because of appetite that Eve, and later Adam, fell into sin by eating the forbidden fruit. Uncontrolled appetite for food plunged the entire human race into sin, opening the door to all of the disastrous consequences that followed, such as abuse, murder, theft, and so forth. (See Genesis 3:6.)

Many generations later, Abraham’s grandson Esau was also unable to gain control over his appetite for food. Esau sold his birthright, which entitled him to a position of great honor and importance, for no more than a single meal—and only a bowl of soup at that! Because of this, Esau lost the cultural privilege and blessing that came with being the firstborn. Instead, Jacob, Esau’s younger brother, received this prestigious title and position.

Later, Jacob—not Esau—was renamed Israel, and his twelve sons became the twelve founding tribes of a great nation. If appetite had not controlled Esau, the title and position of the blessing of Abraham and Isaac would have been his. Esau’s descendants would have become the great chosen nation, rather than the offspring of Jacob.

Years later, when Israel’s descendants wandered around in the hot, arid, Middle Eastern desert wilderness, the entire nation encountered the same struggle. When they were unable to get food, God supernaturally sent them manna from heaven to eat. But instead of appreciating this incredible miracle, they complained that they didn’t like it. You see, it didn’t satisfy their fleshly cravings. Numbers 21:5 says, “And the people spoke against God and against Moses: ‘Why have you brought us up out of Egypt to die in the wilderness? For there is no food and no water, and our soul loathes this worthless bread.’”

In other words, the Israelites hated the manna, so they griped and complained and grumbled against Moses. In verses 6–7, we see the disaster that followed:

So the LORD sent fiery serpents among the people, and they bit the people; and many of the people of Israel died. Therefore the people came to Moses, and said, “We have sinned, for we have spoken against the LORD and against you; pray to the LORD that He take away the serpents from us.” So Moses prayed for the people.

In this particular instance Moses prayed, but God didn’t remove the snakes. Instead, He had Moses make a bronze serpent and put it on a pole. If the snake bit anyone, they simply had to use their faith and look at the bronze serpent and they lived. This serpent on a pole was also a type and shadow of Jesus. But this wasn’t the first time that such a thing occurred. Their uncontrolled appetites had gotten them into big trouble before. Let’s look.

Now the mixed multitude who were among them yielded to intense craving; so the children of Israel also wept again and said: “Who will give us meat to eat? We remember the fish which we ate freely in Egypt, the cucumbers, the melons, the leeks, the onions, and the garlic; but now our whole being is dried up; there is nothing at all except this manna before our eyes!”

—NUMBERS 11:4–6

As you can see, the Israelites caved in to their uncontrolled appetites and mumbled, groaned, and complained loudly that they wanted to enjoy the same food they had in Egypt. Here’s what happened next:

Now a wind went out from the LORD, and it brought quail from the sea and left them fluttering near the camp . . . . And the people stayed up all that day, all night, and all the next day, and gathered the quail (he who gathered least gathered ten homers [a homer was about 10 ½ bushels; ten homers, 105 bushels]); and they spread them out for themselves all around about the camp. But while the meat was still between their teeth, before it was chewed, the

wrath of the LORD was aroused against the people, and the Lord struck the people with a very great plague.

—NUMBERS 11:31–33

Whether or not these birds were diseased, we don't really know. We do know that out-of-control fleshly cravings got these people into big trouble.

We must be very careful not to dismiss these stories as irrelevant. These accounts are extremely relevant to our own lives, for we are made of the same stuff of which these ancient wanderers were made. The uncontrolled appetite of our lower natures is just as dangerous to our own health and well-being as it was to theirs.

## Fleshly Cravings

Let's investigate the lower nature a little further. Just what does it crave? These verses in 1 John spell it out:

Do not love the world or the things in the world. If anyone loves the world, the love of the Father is not in him. For all that is in the world—the lust of the flesh, the lust of the eyes, and the pride of life—is not of the Father but is of the world.

—1 JOHN 2:15–16

What the Bible calls “the lust of the flesh” includes the following cravings:

- Desiring excessive amounts of the wrong foods such as sweets, fats, and meats; a glutton (Prov. 23:1–3)
- Sex outside of marriage
- Impure and ungodly desires
- Thinking about and desiring inappropriate sex
- Compulsive or obsessive desire for things other than God
- Anger and angry outbursts when you don't get your own way
- Creating strife by undermining people, criticizing, and gossiping

- Sedition or rebellion, or simply demanding that those over you do it your way, or else you'll find a way to get what you want regardless
- Murders, which can include destroying those who get in your way, abortions
- Drunkenness and reveling (Gal. 5:19–21)

What the Bible calls “the lust of the eyes” is really nothing more than an uncontrolled desire for sex outside of marriage or a longing for what belongs to other people, such as positions, power, riches, beauty, possessions, and strength. The lust of the eyes causes us to lift ourselves above others and feel smug and self-righteous.

## **Fasting to Control the Lower Nature**

Since we are all born with the same lower nature, what can we do? Fasting is a powerful tool to subdue the strength of our flesh. Fasting can help us control the lower nature's cravings, bringing our flesh under subjection to our minds and spirits.

The key to our spirituality is yielding to the Holy Spirit. Our fleshly, carnal nature opposes God's Spirit and cannot yield. Romans 8:7–8 says, “Because the carnal mind is enmity against God; for it is not subject to the law of God, nor indeed can be. So then, those who are in the flesh cannot please God.” This means that it is impossible to walk in the power of the Holy Spirit and live in the fleshly, carnal nature.

The Bible encourages us to walk in the presence and power of the Spirit as an anecdote for living in the flesh. In Galatians 5:16–17 Paul says, “I say then: Walk in the Spirit, and you shall not fulfill the lust of the flesh. For the flesh lusts against the Spirit, and the Spirit against the flesh; and these are contrary to one another, so that you do not do the things that you wish.”

As long as our fleshly, carnal nature controls us, we will be unable to do the will of the Holy Spirit because it is in direct opposition to His will.

The carnal, unrenewed mind of the flesh is controlled and dominated by the thinking and reasoning of our intellects. Emotions also control and dominate this lower nature, which means that your feelings and desires

control you. In addition to that, the carnal nature is also controlled by the five senses of taste, smell, sight, feeling, and hearing.

But we are not without hope, for the power of God is released through the Holy Spirit who works in us. Ephesians 3:20 tells us, “Now to Him who is able to do exceedingly abundantly above all that we ask or think, according to the power that works in us . . .” That power at work in us is the power of the Holy Spirit. However, it cannot be released in us if we are walking in the flesh.

The promise of Acts 1:8, that we will be divinely empowered by the Holy Spirit to become witnesses of God’s power and love, cannot be realized by the lower, carnal nature. Jesus taught that we must crucify the flesh by taking up our own cross, just as He took up His cross. If we don’t, we will be unable to yield to the Holy Spirit’s power and will be fully controlled by the power of the flesh.

It’s only as we live our lives in vital connection with the living Christ that we become able to crucify the lusts of the flesh and live and walk in the higher nature of the Holy Spirit within.

This process of crucifying the flesh must be accomplished daily through prayer, renewing the mind by regularly reading the Word of God, and by watching every word that comes out of our mouths. All of these things are like the hammers, pickaxes, drills, and machinery that operate at the rock quarry of your hardened flesh. In this effort, fasting is the dynamite that makes all of the other efforts easier and more effective.

## **Abiding in the Word of God**

The Word of God says, “Walk in the Spirit, and you shall not fulfill the lust of the flesh” (Gal. 5:16). This verse suggests that what you focus upon will empower your thoughts. If you focus upon the Spirit of God through prayer and fill your mind with the Word of God, your thoughts will be filled with the power of God to resist negative, poisonous emotions and attitudes.

Our minds must be renewed so that we will be able to walk in the Spirit and not fulfill the desires of the flesh. This renewing of the mind occurs as our thoughts are filled with the powerful, living Word of God. But if our minds are always thinking upon negatives such as jealousy, envy, strife, unforgiveness, or what makes us angry, or upon things we don’t have but

want, on someone who has hurt us or caused us harm, and on what we dislike, then our minds and thoughts are carnal or inspired by our lower nature. When we fill our minds with God's words and thoughts through the Bible and prayer, we feed and strengthen our higher nature, which was designed to serve God.

This is the secret to overcoming temptation—even the temptation of deadly emotions.

## [Abiding in Christlike Speech](#)

Often our mouths get us into more trouble than anything else. They may well be our greatest weapons of destruction. In fact, James 3:6 says, “And the tongue is a fire, a world of iniquity. The tongue is so set among our members that it defiles the whole body, and sets on fire the course of nature; and it is set on fire by hell.” What we say often releases the destructive power of our lower natures into the atmosphere or into individual lives and relationships. How often have we all wished we could take back some of the things we've said?

What you say has enormous spiritual, emotional, and physical power. Proverbs 18:21 says, “Death and life are in the power of the tongue.” Your words actually have the power to heal or kill, to strengthen or wound, to unite or divide. Controlling your words is extremely important. Here are some scriptures about the tongue to recite every time you are tempted to slip and say something you know you'll regret:

- “Out of the abundance of the heart the mouth speaks” (Matt. 12:34).
- “For every idle word men may speak, they will give account of it in the day of judgment” (Matt. 12:36).
- “Let no corrupt word proceed out of your mouth” (Eph. 4:29).

Paul talked about his victory over the carnal nature in 1 Corinthians 9:25–27. Paul said he “disciplined” his body and made it his slave. He accomplished this in part through fasting. The apostle tells us in Romans 13:14 to make no provision for the flesh to gratify its desires. In Colossians 3:5 Paul tells us to “mortify” our members (kjv). In 1 Corinthians 9:27 Paul says to bring the body into subjection.

We are to crucify the flesh according to Galatians 2:20 and Romans 6:6. In 1 Peter 2:11 we are told to abstain from fleshly lust. We must decide: Is the body the master, or is the Holy Spirit the master? The body makes a wonderful servant but a very poor master. In Romans 8:5–6 Paul reminds us, “Those who are dominated by the sinful nature think about sinful things, but those who are controlled by the Holy Spirit think about things that please the spirit. So letting your sinful nature control your mind leads to death. But letting the Spirit control your mind leads to life and peace” (NLT).

Fasting brings the carnal nature into subjection so that the body becomes the servant and the Spirit becomes the master, allowing us to walk in the power of the Holy Spirit.

In addition to helping us conquer the seemingly insurmountable power of the flesh, fasting has many other powerful spiritual applications.

## [The Why of Spiritual Fasting](#)

So why should we fast? What does denying ourselves our favorite foods actually do for us?

### [Builds godly character](#)

For starters, fasting builds character. By enabling us to surrender our lives to God in greater measure, we find more control over our tongues, our minds, our attitudes, our emotions, our bodies, and all our fleshly desires. Fasting also helps us to submit our spirits to God completely so that He can use them for His purposes.

It really is possible to be led by the Spirit of God and not ruled by fleshly desires. However, even though many Christians have invited the power of the Holy Spirit into their lives, they continue to be led about by the insatiable appetites of the flesh. They live their lives pursuing whatever gratifies the cravings of the lower nature or their own selfish motives instead of the purposes of God. Many are good people who actually would like to live on a much higher plane of existence, but they just don't know how.

Fasting allows us to die to the appetites of the lower nature, to the lusts of the flesh. It gives us the ability to build up character and integrity by allowing the Spirit of God to operate through us. The only real way to

build godly character and genuine integrity into our inner man is by spending time in the presence of God.

### Looses chains of bondage

Do you struggle with addictions or addictive behaviors? Sometimes addictions can even show up in our personalities rather than through debilitating behaviors such as alcoholism. For instance, perhaps you've never been an alcoholic, but when you get into a room filled with people, you have an obsessive need to be constantly talking or running everything and everyone in sight. An exaggerated need to control others or to control circumstances and situations can cause as much bondage as drug addiction.

Bondages come in all shapes, colors, types, and sizes. So don't be too quick to dismiss the notion that you may have bondages in your own life. Most of us growing up and living in this very imperfect world end up with some bondages. Those who do not are by far the very rare exception—if they even exist at all.

Do you have bondages in your life? Or do you have close loved ones who are bound by addictive personalities and behaviors? Fasting is critically important if you have children who need to be set free from drugs and alcohol, homosexuality, pornography, or who have been caught up in the throes of rebellion. Fasting can be extremely helpful when you are praying for a loved one's salvation. Is there strife in your home or workplace? Fasting can begin to break any spiritual stronghold so that peace and civility can return.

Isaiah 58:6 says that fasting is to “loose the bonds of wickedness, to undo the heavy burdens, to let the oppressed go free, and that you break every yoke.”

### Humbles ourselves

Although the lower nature can seem amazingly powerful, fasting humbles it. Humbling the flesh is required if we want to live a clean, godly life.

Matthew 18:4 says, “Therefore whoever humbles himself as this little child is the greatest in the kingdom of heaven.” First Peter 5:6 says, “Therefore humble yourselves under the mighty hand of God, that He may exalt you in due time.” James 4:10 says, “Humble yourselves in the sight of the Lord, and He will lift you up.” Matthew 23:12 says, “And whoever

exalts himself will be humbled, and he who humbles himself will be exalted.”

One of the key reasons that fasting gets God’s attention is that it is a key to humility. Fasting humbles our flesh, which finds favor with God. James 4:6 says, “God resists the proud, but gives grace to the humble.” In other words, the humility that can be obtained through spiritual fasting opens the door to God’s grace and favor.

God doesn’t make us humble. He has left that responsibility up to us. We humble ourselves before God with fasting and prayer, as individuals and even as a nation.

## **Fasting for Spiritual Healing, Glory, and Refreshing**

America needs to be healed. Our children need to be healed from the spirits of rebellion, drugs, alcohol, revelry, homosexuality, sexual lusts, and perversion. Our land needs to be healed from the shedding of innocent blood because of the millions of abortions occurring every year. Our culture needs to be healed from the self-centeredness and selfishness that have consumed us, causing us to constantly crave more things, more money, and more power. We are a people desperately in need of spiritual healing.

As we have seen, fasting is a powerful tool for spiritual healing, whether for a nation as a whole, for cities, for families, or for individuals.

We are promised in God’s Word that if we fast and pray as a group that an awesome spiritual healing can take place. Let’s look:

If My people who are called by My name will humble themselves, and pray and seek My face, and turn from their wicked ways, then I will hear from heaven, and will forgive their sin and heal their land.

—2 CHRONICLES 7:14

Again we see that attitude and motive are as important as fasting itself. Even though our culture rewards pride, God does the exact opposite. He rewards the self-imposed humility obtained through fasting. Humbling ourselves helps us to shift our focus away from the pleasures, concerns,

and demands of our lives here on earth and to focus upon the things above—God and His priorities.

Such humble fasting has created a force that has won wars, stayed judgment, and saved cities and countries. Humble fasting before God is awesomely powerful and can turn an entire nation around.

## **Finding the Presence of God**

Have you ever desired to experience God's presence? Fasting can bring the healing and refreshing presence of God into an individual life and into the life of a family or even a nation. Too many of us let natural things absorb our time and energy when we could be enjoying the glorious realm of God's Spirit.

After Moses fasted for forty days, he was swept up into an entirely new place in God's Spirit. He received the Ten Commandments and became the lawgiver of Israel. After Jesus had fasted for forty days, the Holy Spirit empowered His life, and His ministry of healing and preaching was launched.

You too can receive the touch of God's glory upon your own life, just as Jesus and Moses did, through fasting and prayer. The kind of prayer that simply makes long lists of requests to God is not enough. You must enter into the realm of the Holy Spirit through worship, reading God's Word, and listening to God's voice as well as making requests.

Moses experienced the same hunger for more of God that you may be experiencing right now. He prayed that God might reveal Himself to him, although no man could actually look at God and live. His request is found in Exodus 33. The Lord then instructed him:

And the LORD said, "Here is a place by Me, and you shall stand on the rock. So it shall be, while My glory passes by, that I will put you in the cleft of the rock, and will cover you with My hand while I pass by. Then I will take away My hand, and you shall see My back; but My face shall not be seen."

—EXODUS 33:21–23

In other words, Moses got a glance of the glory of the back of God. Exodus 34:29–32 says:

Now it was so, when Moses came down from Mount Sinai (and the two tablets of the Testimony were in Moses' hand when he came down from the mountain), that Moses did not know that the skin of his face shone while he talked with Him. So when Aaron and all the children of Israel saw Moses, behold, the skin of his face shone, and they were afraid to come near him. Then Moses called to them, and Aaron and all the rulers of the congregation returned to him; and Moses talked with them. Afterward all the children of Israel came near, and he gave them as commandments all that the LORD had spoken with him on Mount Sinai.

Moses's encounter with God was so powerful that he actually shone with God's glory, and the people, blinded by the light that was on him, shrank back in fear. Moses's dynamic experience with God went much further than merely impacting his own life. The touch of God he received dramatically impacted the entire nation.

The radiant glow shining on his face was so bright that Moses covered his face with a veil to keep from blinding those around him. Verse 33 says, "And when Moses had finished speaking with them, he put a veil on his face."

Fasting allowed Moses to enter such a depth of God's presence that the very glory of God came upon him and radiated to everyone nearby. Fasting created such a sense of God's power and presence upon him that God's glory overflowed.

Fasting enables us to touch the world around us with God's love and power. Fasting can be a tool to access God's power to affect our children, our extended families, our cities, and even the world. Acts 1:8 says, "But you shall receive power when the Holy Spirit has come upon you; and you shall be witnesses to Me in Jerusalem, and in all Judea and Samaria, and to the end of the earth."

In fact, it was with fasting that the apostles in the first century sent out their missionaries to proclaim the message of Christ. Acts 13:2-3 says, "As they ministered to the Lord and fasted, the Holy Spirit said, 'Now separate to Me Barnabas and Saul for the work to which I have called them.' Then, having fasted and prayed, and laid hands on them, they sent them away."

## **Fasting Delivers Us From Error**

When you are making critical decisions such as choosing your mate, changing a job, deciding to move, or other major life-impacting decisions, you need God's divine guidance to be sure you are not holding onto opinions or other judgments that are in error.

The problem with error is that when we're in it, we think we're right. That's why we need divine guidance for life's major decisions.

The Bible promises that the Holy Spirit is ready and willing to provide that guidance when you ask. John 16:13–14 says, "However, when He, the Spirit of truth, has come, He will guide you into all truth; for He will not speak on His own authority, but whatever He hears He will speak; and He will tell you things to come."

The apostle Paul received this kind of guidance in Acts 9 after meeting Jesus Christ on the road to Damascus. Before he became a believer, the apostle actually was very hostile to the church of Jesus Christ. A wave of persecution swept through the early church, and Paul was one of its leaders. While Paul was erroneously following his own best judgment, Jesus Christ appeared to him, and he fell to the earth.

Blinded by the light of the risen Savior, the Lord told him to visit a particular house. He had to be led by hand for three days, during which time he fasted, neither eating nor drinking.

Paul genuinely believed that he was serving God by persecuting Christians until he heard Christ's voice saying, "Why are you persecuting Me?"

But when Paul asked, "Who are You, Lord?," the reply was, "I am Jesus."

Fasting will free you from your own misjudgments and allow the light of Christ's truth to shine clearly.

There are times in all of our lives when we are being led around by our own misjudgments and desires, and we don't even know it. Regular fasting can protect us from the blindness of our own opinions and desires.

Fasting will help us to be led by the Spirit instead of being led by faulty judgments. Paul was a good man, but his faulty judgments caused him to actually fight against God instead of fighting for Him. It's tragic that we humans can be so blind—but we can! That's why spiritual fasting is so very important.

## **Fasting for Healing**

Fasting is also a powerful tool for healing and restoration. Here's what the Bible says about it:

Then your light shall break forth like the morning, your healing shall spring forth speedily, and your righteousness shall go before you; the glory of the LORD shall be your rear guard.

—ISAIAH 58:8

Not only does fasting break the chains of wickedness, lift heavy burdens, and free the oppressed, but it also brings back your health.

## **The When of Spiritual Fasting**

It's important to fast for the right motive, but I'll bet you didn't know that it's equally important NOT to fast at certain times. The disciples of Jesus learned this truth. The disciples of John and of the Pharisees were fasting. Then they came and said to Him, "Why do the disciples of John and of the Pharisees fast, but Your disciples do not fast?"

And Jesus said to them, "Can the friends of the bridegroom fast while the bridegroom is with them? As long as they have the bridegroom with them they cannot fast. But the days will come when the bridegroom will be taken away from them, and then they will fast in those days."

—MARK 2:18–20

When Jesus was walking with them through the hills of Galilee, teaching them and praying with them, fasting was inappropriate. It was neither the time nor the season to fast.

Rather, His presence brought a season of rejoicing and feasting. However, after Jesus ascended into heaven, the disciples were expected to fast.

In Mark 2:20, Jesus said, "They will fast in those days."

Still, we don't actually read about the disciples fasting until the Book of Acts. In Acts 13:1–3 the church fasted together as they were guided by the Holy Spirit or had a need.

After the followers of Christ began fasting, they had rich teaching provided by the Master from which to draw. Jesus had taught them all about motives and even about appearance during times of fasting. In Matthew 6:17–18, Jesus said, “But you, when you fast, anoint your head and wash your face, so that you do not appear to men to be fasting, but to your Father who is in the secret place; and your Father who sees in secret will reward you openly.”

Jesus did not say “if” you fast but “when” you fast. He assumes that fasting will be a normal part of spiritual life once He, the Bridegroom, is gone.

So then, when should we fast? Always fast as the Holy Spirit leads. In other words, just as Jesus was led into the wilderness to fast and pray, we should also be led by the Spirit into times and seasons of fasting. The New Testament never lays down strict rules regarding fasting; therefore, we should never impose strict rules upon others or ourselves.

## [Regularly Scheduled Visits](#)

Even though most spiritual leaders were called to a fasted lifestyle, throughout time many have been called to fast for regularly scheduled times. Let’s investigate.

We know that the Jewish leaders fasted regularly, usually twice a week. The Bible mentions their regular fasts in Luke 18:11–12.

The Pharisee stood and prayed thus with himself, “God, I thank You that I am not like other men—extortioners, unjust, adulterers, or even as this tax collector. I fast twice a week; I give tithes of all that I possess.”

The *Didache* was a Christian manual on the practices of the church that was written in the second century. The *Didache* actually ordered regular weekly fasts on both Wednesdays and Fridays. The writers of this document said, “Let not your fast be with hypocrites, for they fast on Mondays and Thursdays, but do your fast on Wednesdays and Fridays.”<sup>1</sup> By ordering regular fasts, the *Didache* was doing just as it criticized the Pharisees for doing—it was promoting legalism.

Later the Roman Catholic Church set aside Fridays as its fast day. No Catholic Christian was permitted to eat meat on Fridays. Even Martin

Luther, the leader of the Protestant movement, promoted fasting. However, he insisted that fasting be voluntary and private.

John Wesley, on the other hand, recommended that Christians fast on the two week days that were mentioned in the *Didache*—Wednesdays and Fridays. Wesley refused to ordain an individual in the Methodist ministry if he didn't fast on those days.

Other great men of God fasted regularly also, men such as Andrew Murray, Charles Finney, Charles Spurgeon, and John G. Lake.

A commitment to regular fasting is another powerful way to enjoy the benefits of a fasted lifestyle. For today's disciples who regularly minister to hurting individuals, fasting is a mighty tool of spiritual empowerment.

As we've seen, fasting is very important in spiritual life. But we've also seen that not all fasting is helpful. Legalistic fasting earned the Pharisee in Luke no brownie points with God. The reasons for which we should take up spiritual fasting are always totally selfless.

As we've seen, God is most concerned with our motives for fasting. Jesus too was far more concerned with the motives behind fasting than with how long or how often we fast. Motive is everything when it comes to spiritual fasting.

## [In Conclusion](#)

Do you desire to experience the mighty power and supernatural presence of God in your life? I trust that by now you have realized that it may require more from you than a simple prayer. To go deeper into spiritual things you may have to humble yourself by combining fasting with your prayer. Do you desire for God to change seemingly insurmountable circumstances in a loved one's life or in your family or workplace? Fasting can empower your prayers and break the strongest bondage and oppression.

Spiritual fasting is a mighty key that, when accomplished with the right motives, produces powerfully dynamic results.

Let's turn now and look at how fasting was used in just these very ways by great men and women throughout history.

## Chapter 12

# SPIRITUAL FASTING THROUGHOUT THE BIBLE

**T**HE BIBLE SAYS THAT WHEN WE FAST OR STOP EATING FOR SPIRITUAL purposes, then God will feed us something better than food. Isaiah 58:14 says He will feed us “with the heritage of Jacob.” What that means is that fasting will give us a place among other great spiritual men and women throughout history.

This is an incredible promise, for many great men and women have rocked nations and shaken kingdoms. Walking in their footsteps is a genuine privilege.

Let’s turn now and look at some of these spiritual giants and examine their powerful spiritual fasts. They are named for the great spiritual leaders who used them to make their world better and to rise above the human, fleshly condition.

Jesus Himself employed fasting to conquer Satan.

Let’s investigate the fast of Jesus. The story begins when John the Baptist baptized Jesus. In Luke 3:21–22, the Bible states, “Jesus also was baptized; and while He prayed, the heaven was opened. And the Holy Spirit descended in bodily form like a dove upon Him, and a voice came from heaven which said, ‘You are My beloved Son; in You I am well pleased.’”

This is the first of two major experiences Jesus had before entering public ministry. In this experience, the Holy Spirit descended upon Him in a visible form. If Kodak cameras had been available back then, no doubt someone would have snapped pictures of this powerful phenomenon. Even so, this incredible sign from heaven did not launch Christ’s ministry. After the Holy Spirit came down upon Him, He was led by the Spirit into the wilderness to fast and pray (Matt. 4:1).

For forty days Christ ate nothing. After this extended fast, Luke 4:14 says, “Then Jesus returned in the power of the Spirit to Galilee, and the news of Him went out through all the surrounding region.”

Later, Jesus would sit among the people and teach three disciplines in the Sermon on the Mount. They include prayer, giving, and fasting—and He placed all three on the same level. Many believers feel it is their duty to pray and give but seldom feel the same need to fast. But Jesus didn't say, "If you fast . . ." He said, "When you fast . . ." (See Matthew 6:17–18.)

Jesus didn't begin His ministry until He had fasted for forty days. Jesus was first baptized. Then the Holy Spirit descended on Him, and afterward He was full of the Spirit. The Holy Spirit led Him into the desert, and after His fast, He returned in the power of the Holy Spirit. This was when His mighty ministry was launched, a ministry of great miracles, signs, and wonders. All of this took place as a result of fasting.

Interestingly, Jesus told us that we too would do these works and even greater works because He went to the Father. (See John 14:12.) I truly believe that we will see these greater works as we learn and practice the great spiritual discipline of fasting.

If Jesus Christ felt the need to fast, how much more should we? An individual, a group of people, or an entire nation can accomplish fasting. When the Jews came together each year on the Day of Atonement for a day of corporate fasting, the results were powerful. Let's take a look.

## **Corporate Fasting for Forgiveness of Sins**

Historically, God's people were commanded to fast once a year. On the Day of Atonement, all Israel came before God in corporate fasting and repentance. (See Leviticus 16:29–34; 23:26–32.)

The Day of Atonement was considered the single most sacred day of the entire religious year, a day in which everyone in the entire nation stopped everything he was doing, refused to eat, and sought God's forgiveness for all the sins committed that year.

Leviticus 16:29 tells us:

This shall be a statute forever to you: In the seventh month, on the tenth day of the month, you shall afflict your souls, and do no work at all.

It goes on to say, "For on that day the priest shall make atonement for you, to cleanse you, that you may be clean from all your sins before the

LORD. It is a sabbath of solemn rest for you, and you shall afflict your souls. It is a statute forever” (vv. 30–31).

Since the day this statute was given, for the past thirty-five hundred years, Jews have honored and observed Yom Kippur, or the Day of Atonement, as a solemn day of fasting. This fast day was mentioned in the New Testament. As Paul journeyed to Rome, “much time had been spent, and sailing was now dangerous because the Fast [which was the Day of Atonement] was already over” (Acts 27:9).

The Day of Atonement usually fell at the end of September or the beginning of October. The fasting of this special day was part of the humility and repentance necessary for atonement to be given by God. On this day, the high priest actually laid hands on a goat and spoke out the people’s sins. When he was through, he released the goat into the desert or the wilderness. The blood of another goat was then sprinkled in the holy of holies in a solemn act. Through this ceremony, the sins of the people were cleansed.

The Day of Atonement was always on a Sabbath day. During Jesus’s lifetime, the Jews observed about twenty-two different spiritual fasts, including the Day of Atonement fast.

Not only was fasting used to cleanse the sins of an entire nation, corporate fasting was used by the Jews also to seek protection and deliverance when their enemies tried to destroy them.

## **The Esther Fast—for Protection, Deliverance, and Divine Favor**

Esther was a beautiful, young Hebrew girl living in Persia during Israel’s captivity. This lovely woman was chosen as queen over all the other young women in the entire nation. The prime minister of Persia was Haman, an evil man who hated the Jews.

Haman succeeded in passing a law of genocide to kill all the Jews. Therefore, Queen Esther decided to risk going before the king to try and save her people. According to the laws, if anyone, even the queen, requested an uninvited audience with the king, that person could be killed.

Faced with the danger to her people and the danger to Esther herself, the queen called a fast. The Bible says:

Go, gather all the Jews who are present in Shushan, and fast for me; neither eat nor drink for three days, night or day. My maids and I will fast likewise. And so I will go to the king, which is against the law; and if I perish, I perish!

—ESTHER 4:16

Esther went before the king dressed, not in sackcloth and ashes, but with her royal robes. She invited Haman and the king to a banquet she had prepared, and the king accepted. However, later that night the king could not sleep. He had his royal diary brought in, and as the diary was being read, he learned that Esther's cousin Mordecai had saved his life. The king's heart had already been turned toward Esther because of the people's corporate fast.

When Haman entered the court to speak with the king about another matter, the king asked Haman this question: "What shall be done for the man whom the king delights to honor?" Now Haman thought in his heart, 'Whom would the king delight to honor more than me?'" (Esther 6:6).

Haman answered the king with these words:

Let a royal robe be brought which the king has worn, and a horse on which the king has ridden, which has a royal crest placed on its head. Then let this robe and horse be delivered to the hand of one of the king's most noble princes, that he may array the man whom the king delights to honor. Then parade him on horseback through the city square, and proclaim before him: "Thus shall it be done to the man whom the king delights to honor!"

—ESTHER 6:8–9

Just before this happened, Haman had prepared gallows to hang Mordecai. But instead of hanging him, Haman was forced to parade him with great tribute throughout the city. Then Esther informed the king that Haman had issued the decree to have the Jewish people exterminated. The king entered as Haman was reaching for the queen to beg for mercy. It looked to the king as if Haman was attempting to assault his wife sexually. The story ends with Haman being hanged on the gallows that were prepared for Mordecai.

The three days of corporate fasting called by Esther turned the situation completely around in a mighty display of supernatural favor and spiritual power.

The three-day Esther fast is for protection, deliverance, and divine favor, and it reveals the power of corporate fasting to move the hand of God mightily and to change the hearts of men. This fast opens up even those whose hearts are bitterly hardened against God and can help turn hurting individuals back to God.

Let's turn now and look at the fast of another great leader whose spiritual fast significantly impacted a nation's history.

### **The Ezra Fast—for Direction and Protection**

For centuries the Jews was held in captivity by the nation of Persia. When freedom finally came, Ezra, a priest, was given permission by Cyrus, the king of Persia, to return to Jerusalem to rebuild the magnificent Jerusalem temple.

The trip to Jerusalem was very dangerous. Ezra needed protection to lead the great caravan of thousands of defenseless Jews back to their home city. He was ashamed to ask the king for an escort of soldiers because he had bragged about God's protection for all who worship Him. Many of the travelers actually had become wealthy in captivity, and so Ezra was responsible for safely transporting their treasures and other belongings as well.

Ezra 8:21 says, "I proclaimed a fast there at the river of Ahava, that we might humble ourselves before our God, to seek from Him the right way for us and our little ones and all our possessions." They fasted for the protection, security, and direction from God.

The journeyers returned to Israel in safety with all of their possessions intact. Once again, the Bible reports powerful spiritual results were obtained through fasting.

Although corporate fasting was common, individual fasts were even more so. Elijah was another spiritual giant of the Bible who understood the power of fasting for affecting the outcome of great spiritual battles. The Elijah fast is undertaken during times of intense spiritual conflict.

### **The Elijah Fast—to Combat Spiritual Enemies**

Elijah had just won the greatest victory of his life over four hundred fifty prophets of Baal. He actually had called fire down from heaven and then had all of those demonically inspired prophets of Baal killed. Queen Jezebel, who had given these prophets a place of authority, responded in an angry frenzy, threatening to murder Elijah by the very next day.

Thrown into a state of terror, depression, and despondency, Elijah ran for his life. He didn't stop running until he was about a day's journey away in the wilderness, where he sat down to rest under a juniper tree. It seems clear that Elijah realized that he lacked what it took to battle what was coming against him. In 1 Kings 19:5–8, we read:

Then as he lay and slept under a broom [juniper] tree, suddenly an angel touched him, and said to him, "Arise and eat." Then he looked, and there by his head was a cake baked on coals, and a jar of water. So he ate and drank, and lay down again. And the angel of the LORD came back the second time, and touched him, and said, "Arise and eat, because the journey is too great for you." So he arose, and ate and drank; and he went in the strength of that food forty days and forty nights as far as Horeb, the mountain of God.

In this account, Jezebel represents the evil forces that can come against God's own. The Bible says, "For we do not wrestle against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this age, against spiritual hosts of wickedness in the heavenly places" (Eph. 6:12). Confronted with the rage of evil forces, Elijah responded with fasting.

Elijah didn't eat or drink, and the power of the terror, despondency, and depression that had assailed his mind and overwhelmed his emotions was broken.

We all have faced overwhelming situations that terrify us, paralyze us, and place us in emotional and mental bondage. There are even times in which we feel as if the very forces of hell are raining down on us.

Nonetheless, we don't have to become paralyzed or bound by a yoke of anxiety, depression, and fear. Just as with Elijah, God has provided fasting as a powerful weapon to combat the spiritual forces that attack our minds and emotions.

Isaiah 58:6 says, “Is this not the fast I have chosen: to loose the bonds of wickedness, to undo the heavy burdens, to let the oppressed go free, and that you break every yoke?” Yokes are devices for joining two oxen together. When you are yoked with depression, you become bound or united to it as a heavy burden that you must carry.

Yokes of bondage include negative attitudes such as depression, despondency, fear, and anxiety. But don’t go on a forty-day fast as Elijah did without a special word from God, no matter how heavy your yoke. Even then, your physician must closely monitor such a lengthy fast. Also, never go on a fast without drinking adequate amounts of water on a daily basis.

Both Elijah and Moses went on a supernatural fast in which they ingested neither food nor water. Jesus, however, went on a forty-day fast and drank water but ate no food.

Interestingly, on the Mount of Transfiguration, Elijah and Moses—the two men who had fasted for forty days without food or water—were there with Jesus. (See Matthew 17:2–3.) All three who stood on the Mount together had undergone a forty-day fast.

Fasting finds great favor in God’s sight because of its ability to break the control of the flesh. Daniel was another great spiritual leader whose fasting brought about powerful results. Let’s take a look at the Daniel fast for overcoming the flesh.

## **The Daniel Fast—to Overcome the Flesh**

Daniel and three other Hebrew youths—Shadrach, Meshach, and Abednego—were Jews in captivity, but in the kingdom of Babylon. They were greatly favored for their purity, and they were well educated and extremely gifted both mentally and spiritually.

When these four young men were captured and taken into the king’s palace to educate them in the ways of the Chaldeans, Daniel 1:5 states, “The king appointed for them a daily provision of the king’s delicacies and of the wine which he drank.” He planned to keep them on his own rich diet of meats, fats, sugary pastries, and wine for three years. At the end of the three years they would be presented to the king.

However, verse 8 says, “But Daniel purposed in his heart that he would not defile himself with the portion of the king’s delicacies, nor with the

wine which he drank.” In other words, Daniel rejected the rich, temptingly delicious meats, wine, and pastries of the royal court, perhaps because they did not meet the requirements of Jewish dietary laws or because these youths may have taken vows against drinking alcohol.

So Daniel made a request of the prince of the eunuchs. Verse 12 says, “Please test your servants for ten days, and let them give us vegetables to eat and water to drink.” The King James version uses the word *pulse*. “Pulse” consisted of vegetables and grains, wheat, barley, rye, peas, beans, and lentils.

Daniel and the three other Hebrew youths lived a fasted life for three years on the vegetarian diet of pulse while learning and studying in the king’s court, and God honored their partial fast. We’re told in verse 15, “At the end of ten days their features appeared better and fatter in flesh than all the young men who ate the portion of the king’s delicacies.”

God tremendously favored their decision to fast and granted them favor, wisdom, and insight far above anyone around them. In verses 18–20 we read:

At the end of the days, when the king had said that they should be brought in, the chief of the eunuchs brought them in before Nebuchadnezzar. Then the king interviewed them, and among them all none was found like Daniel, Hananiah, Mishael, and Azariah; therefore they served before the king. And in all matters of wisdom and understanding about which the king examined them, he found them ten times better than all the magicians and astrologers who were in all his realm.

Daniel knew what was healthy to eat, and he purposed in his heart that he would not defile himself. The Daniel fast eliminates rich foods such as meats, pastries, cakes, pies, cookies, alcohol, and any other food that is tempting to the flesh.

Today, people are so bound to their flesh that they often cannot go one meal without eating some form of meat, something sweet, fatty, or some other type of rich food. We must crucify our flesh daily and take up our cross and follow Christ. (See Matthew 16:24.) What better way to crucify our flesh than to follow Daniel’s fasted lifestyle?

## **The Second Daniel Fast—for Spiritual Breakthroughs**

We find a second fast of Daniel in which he took in nothing but water. Let's look.

Daniel 9:3 says, "Then I set my face toward the Lord God to make request by prayer and supplications, with fasting, sackcloth, and ashes." When the Jews fasted with sackcloth and ashes, it was never a partial fast, but a total fast with complete abstinence from food.

Again, during a season of special prayer when Daniel desperately needed revelation from God, he fasted. Daniel 10:2–3 says, "In those days I, Daniel, was mourning three full weeks. I ate no pleasant food, no meat or wine came into my mouth, nor did I anoint myself at all, till three whole weeks were fulfilled."

Many scholars believe that this was a partial fast or a diet. However, some scholars believe it was a total fast. During this time of fasting, Daniel had great visions from heaven, along with an incredible angelic visitation.

This time of fasting reveals some astonishing insights into the spiritual realm and how it works. Once again, we see fasting as a dynamic agent of powerful spiritual warfare. It seems that the great ruling angel, Gabriel, was attempting to get a message to Daniel from the moment Daniel started praying. However, the account paints a picture of a great spiritual struggle encountered by this angelic being that was broken as Daniel fasted.

The mighty, shining heavenly ruler spoke to Daniel. "From the first day that you set your heart to understand, and to humble yourself before your God, your words were heard; and I have come because of your words. But the prince of the kingdom of Persia withstood me twenty-one days" (Dan. 10:12–13).

The angel spoke of powerful, spiritual demonic princes and great, high-ranking angels sent to withstand these beings. The fascinating thing about this passage is the place it gives to fasting and prayer. It was because of Daniel's three-week fast that the great angel was able to breakthrough the dark opposition and meet with Daniel to provide the mighty revelation he was seeking.

This astonishing passage suggests that fasting is extremely important when we need a breakthrough. In addition to that, it also suggests that we must never give up when we are seeking God.

Throughout the Bible, those who believed in God and wanted to develop spiritually sought God through the discipline of fasting. The disciples of Jesus were among them also.

## **The Disciples' Fast—for Empowered Ministry**

When the disciples who traveled with Jesus were sent out to begin ministering on their own, they encountered some unexpected resistance to the healing power of God. When the disciples were powerless to heal a young boy, the child's father approached Jesus.

The father's request is recorded in Matthew 17:15.

Lord, have mercy on my son, for he is an epileptic and suffers severely; for he often falls into the fire and often into the water.

Apparently the father didn't understand that his son was actually gripped by a demonic force. Although most cases of epilepsy have physical causes, this particular case did not.

In Matthew 17:16, we see that the father had taken his son to the disciples, but they were powerless to respond. Many of our own youth, teens, and young adults are bound with alcohol, drugs, nicotine, sexual desire, a spirit of revelry and partying, homosexuality, satanism, witchcraft, palm reading, and other dangerous strongholds. Unfortunately, some of these young people are Christians, but they are still bound with fear, anger, bitterness, resentment, unforgiveness, jealousy, strife, envy, and many other deadly emotions.

How can our youth be bound with these strongholds and yet profess to know Christ? Here's how. They may have had their sins forgiven, and they may have professed Christ as their Savior, but they have never had the spiritual chains of wickedness broken off of them. Isaiah 58:6 says, "Is this not the fast that I have chosen: to loose the bonds of wickedness, to undo the heavy burdens, to let the oppressed go free, and that you break every yoke?"

The disciples' fast breaks yokes, or breaks mental, spiritual, and emotional bondages, and sets people free. If you are a mother or father

with a son or daughter in rebellion, bound with homosexuality, sexual perversion, sexual desire, drugs, alcohol, or any other stronghold, Jesus Christ can set them free by applying the principles of the fast of the disciples.

In Matthew 17:17–21, it's clear that Jesus expected the disciples to exercise enough faith to heal the demonized boy. He rebuked them by saying:

“O faithless and perverse generation, how long shall I be with you? How long shall I bear with you? Bring him here to Me.” And Jesus rebuked the demon, and it came out of him; and the child was cured from that very hour.

Then the disciples came to Jesus privately and said, “Why could we not cast it out?”

So Jesus said to them, “Because of your unbelief; for assuredly, I say to you, if you have faith as a mustard seed, you will say to this mountain, ‘Move from here to there,’ and it will move; and nothing will be impossible for you. However, this kind does not go out except by prayer and fasting.”

This boy's seizures were the result of a demonic stronghold that required fasting and prayer to break. Although demonic strongholds are created by sin, it doesn't necessarily follow that everyone who sins is bound by evil forces. But if sin seems impossible to resist, causing an individual to repeatedly fall back into destructive behaviors, then a stronghold may be involved. Strongholds include alcoholism, drug addiction, sexual addictions, compulsive lying, stealing, or any other strongly compulsive behavior.

To overcome a stronghold, first you must recognize it for what it is—a powerful way in which dark forces have attempted to control you. Next, it is important to avoid people and situations that link you to that stronghold. For example, if you are an alcoholic, stay away from bars and avoid your old drinking buddies.

It's also important to watch what you say. Your words hold great power. Try to speak words that will bring faith and life, not depression and hopelessness. In other words, when you are tempted, don't say, “This thing is bigger than me. I'll never get free.” Instead, speak the powerful Word of

God: “*If the Son of God has set me free, then I am free indeed!*” (John 8:36).

Join your faith together with the faith of other believers. Have them pray for you and with you. Visit and share your feelings with those who will help you to stay focused and strong.

If you have never asked Christ to come into your life, I encourage you to do so. There is great freedom in the power and fellowship of the Holy Spirit. Salvation is no farther away than the whisper of a prayer. Why not invite Jesus Christ into your heart this very minute? Simply bow your head and pray this prayer:

*Dear Jesus, I repent for all of my sins. I repent for the sins that have brought bondage and fear into my life and into the lives of others. I thank You for dying on a cross for me so that I might be free. I receive Your forgiveness right now. Jesus, come into my heart, for I give my life to You. In Jesus's name, amen.*

If you have just prayed this prayer, freedom and release are yours. Christ has forgiven your sins and entered your heart. Accept it by faith, which is nothing more than choosing to believe God. And by the way, welcome to the family!

Continue to build up your faith through Bible reading, praying, and speaking the Word of God. Now, if you have received Christ, prayed, and done everything else we've discussed and still continue to struggle against a stronghold, you may need to do some fasting to break its power over you.

Interestingly, when Jesus encountered those who were demon possessed, He never attempted to heal them. Rather, He cast out the demon. Another example of Jesus's dealings with demonic strongholds can be seen in Mark 5:1–16.

In Mark 5:8–9, Christ spoke to the stronghold. He said:

“Come out of the man, unclean spirit!” Then He asked him, “What is your name?” And he answered, saying, “My name is Legion; for we are many.”

Unfortunately, today we treat most addictions and diseases with drugs, when the actual cause may be a satanic stronghold. An individual

receiving such treatments will never be truly healed until the stronghold is dealt with. This usually requires prayer and fasting.

The Bible describes the disciples' fast to break strongholds in Isaiah 58:6, where God gives us the reasons for fasting. As we read earlier, it says, "Is this not the fast that I have chosen: to loose the bonds of wickedness, to undo the heavy burdens, to let the oppressed go free, and that you break every yoke?"

Other great ministers in the Bible fasted. For instance, Moses fasted for forty days, as recorded in Exodus 24:18. Interestingly, Moses fasted for forty days at least two other times. (See Exodus 34:28; Deuteronomy 9:18.)

I strongly discourage you from ever fasting without drinking water. Water is absolutely essential for life, and we can only live about four days without water. Moses and Elijah had a supernatural fast, since they consumed neither food nor water. In addition, never fast beyond three days without being under the care of a nutritional physician.

Some other great ministers who fasted in the Bible include King David, the great prophet Samuel, the apostle Paul, and John the Baptist.

## [Living a Fasted Life](#)

Many great ministers with special callings in the Bible actually went beyond fasting. They lived a fasted lifestyle.

John the Baptist was one of these individuals who lived his entire life in a partially fasted state. We see this lifestyle described in Matthew 3:4.

And his food was locusts and wild honey.

John the Baptist was a Nazirite. He was called to a Nazirite vow and a fasted life before he was even born. That call is recorded in Luke. For he will be great in the sight of the Lord, and shall drink neither wine nor strong drink. He will also be filled with the Holy Spirit, even from his mother's womb.

—LUKE 1:15

John the Baptist lived a fasted life that included eating locusts and wild honey for his protein. Otherwise, he was a total vegetarian, most likely supplementing his diet of honey-coated bugs with fruits, vegetables, and some grains.

Another well-known Nazirite was Samson. He kept a lifelong fast from wine and alcoholic beverages and from touching anything that had died. Therefore, Samson was probably a vegetarian too. In addition to that, Samson vowed never to cut his hair. (See Judges 13:4–5.)

These faithful men lived in a deeper level of devotion and separation to God than most people today even understand. Instead of feeding his flesh, John the Baptist hungered for the things of God. Jesus said in Matthew 5:6, “Blessed are those who hunger and thirst for righteousness, for they shall be filled.”

By living fasted lives, John the Baptist and Samson were empowered to speak a word of prophecy and deliverance to their generations. John the Baptist stormed the countryside, preparing the crowds for the coming of Christ.

The fasted lives of these individuals signaled that they were born for a great and special purpose. Their lives were not their own but were to be lived in complete devotion to God.

Are you interested in going on a spiritual fast? Do you seek to influence your nation, city, workplace, or family? Would you like to break through the strength of your flesh or the power of a particular bondage? I trust you’ve discovered some powerful insights into fasting through this list of biblical spiritual fasts. I encourage you to select the fast that most suits your particular spiritual goals. Appendix B is a practical fasting workbook that will help you to get focused and to begin.

## **In Conclusion**

I trust that you’ve discovered that fasting is a powerful tool for health, cleansing, corporate strength, and spiritual empowerment. The Bible gives fasting an ancient position of honor, a place beside other dynamic principles for health and spiritual growth.

Fasting is a privilege, and it is a biblical key to cleansing that will bless your life with the gift of health, healing, renewed vitality, longevity, and deeper spirituality.

As you begin to undergo periodic juice fasts for detoxification, I encourage you to first commit that time to God for spiritual cleansing and renewal. Once you become accustomed to fasting for two or three days, you may choose to increase that time a little. Learn to devote increasing

portions of that time to Bible reading, praying, and journaling for personal and spiritual growth. At times you may even choose to commit your fast times to even higher purposes, such as fasting for issues of national cleansing and healing.

As you develop a life of fasting and prayer, you will find that God will feed you with the heritage of Jacob. You will walk in the footsteps of great men and women who have gone before us—men and women who increased in purity of body, mind, and spirit, and who touched heaven with their prayers and nations with their passion.

## A PERSONAL NOTE

### From Don Colbert

**G**OD DESIRES TO HEAL YOU OF DISEASE. HIS WORD IS FULL OF PROMises that confirm His love for you and His desire to give you His abundant life. His desire includes more than physical health for you; He wants to make you whole in your mind and spirit as well through a personal relationship with His Son, Jesus Christ.

If you haven't met my best friend, Jesus, I would like to take this opportunity to introduce Him to you. It is very simple. If you are ready to let Him come into your life and become your best friend, all you need to do is sincerely pray this prayer:

*Lord Jesus, I want to know You as my Savior and Lord. I believe You are the Son of God and that You died for my sins. I also believe You were raised from the dead and now sit at the right hand of the Father praying for me. I ask You to forgive me for my sins and change my heart so that I can be Your child and live with You eternally. Thank You for Your peace. Help me to walk with You so that I can begin to know You as my best friend and my Lord. Amen.*

If you have prayed this prayer, you have just made the most important decision of your life. I rejoice with you in your decision and your new relationship with Jesus. Please contact my publisher at [pray4me@charismamedia.com](mailto:pray4me@charismamedia.com) so that we can send you some materials that will help you become established in your relationship with the Lord. We look forward to hearing from you.

## Appendix A

# OTHER SOLUTIONS FOR TOXIC RELIEF

WHILE IT'S VITALLY IMPORTANT TO DETOXYFIFY YOUR BODY, THERE are other measures you can take to live free from the effects of this toxic planet. Here are some additional helpful solutions to help you stay healthy.

### Oil spills

If you smell gas or see smoke from oil burns, stay indoors. Also set your air conditioner to recycle the indoor air so that the outdoor air doesn't filter into the house. Avoid physical exertion that puts extra demands on your lungs and heart.

Follow local and state public health guidelines for consumption of seafood and water. Stay up to date on local and state public health guidelines on water activities, such as swimming, boating, and fishing.

Extended contact with oil dispersants can cause rashes, dry skin, and eye irritations. If you experience prolonged exposure to oil dispersants, see your doctor immediately.<sup>1</sup>

### Nuclear radiation

When exposed to nuclear radiation, pay attention to three principles: time, distance, and shielding.<sup>2</sup>

When it comes to time, know that the amount of exposure increases and decreases depending on how much time you spend near the source. If radioactive material gets inside your body, you aren't able to move away from it, so the time spent near the material is constant until it decays or the body eliminates it naturally.

Concerning distance, your exposure is less the farther away from the source you are. Alpha and beta particles aren't strong enough to travel far, but gamma rays can travel long distances and create the need to be especially careful of exposure distance. As a general rule, doubling your distance from the radioactive source will reduce its exposure power by a factor of four.

In general, the greater the shield you have from a radioactive source, the less exposure you have to it. The shield absorbs the radiation between you and the source, and the amount of shielding required depends on the

amount of energy given off by the rays. A thin material, such as paper, is strong enough to shield against alpha particles. Heavy clothing is sufficient for beta particles. But a much heavier, dense shield, such as lead, is necessary for protection against powerful gamma rays.

Supplements to take if exposed to nuclear radiation include potassium iodide (KI) and a glutathione booster such as Max GXL (see Appendix D). Adults should take 130 milligrams of potassium iodide (KI) or 1 tab. Children ages three to eighteen should take 65 milligrams of KI unless they are 150 pounds or more, in which case they can take the adult dosage of 130 milligrams. A one-time dose is usually all that is needed to protect the thyroid gland.

### [Air pollution](#)

Avoid heavy smog and gasoline fumes. If you are waiting for a taxi at the airport and the air outside is full of fumes from traffic and buses, then go inside to wait. Don't stand around at a bus station in fume-filled areas behind the buses. Never sit in heavy traffic with your window open, and if you are following a motorist whose car emits a cloud of nauseating fumes, take another route, if necessary, to get away from those dangerous emissions, which are high in carbon monoxide, hydrocarbons, and many other chemical pollutants, or roll up your windows and drive a safe distance away from the vehicle and recycle the air in your car.

Never jog or run alongside a busy highway where your lungs can be absorbing high amounts of carbon monoxide, hydrocarbons, and other toxins.

## [Other Solutions for Toxic Relief](#)

### [Sick building syndrome](#)

You can minimize sick building syndrome in your home by choosing less toxic carpets or installing hardwood floors or tile floors. Use less toxic paints. Never buy or use furniture made of pressed wood or particleboard. Instead, choose hardwood or metal furniture. Select drapes made of cotton instead of fabrics that have been treated with formaldehyde.

Plants have a wonderful practical use, as well as creating an attractive environment. Plants actually take in carbon dioxide and many other dangerous gasses and give off clean, pure oxygen. If you suspect that the

office building in which you work is sick, surround your workplace with plants. Spider plants, philodendrons, Boston ferns, and English ivy are all easy-to-grow, hardy indoor plants. Best yet, they tend to be excellent natural air purifiers.

### **Bacteria, mold, and yeast**

Minimize your exposure to mold spores and dust mites by keeping the heating and air conditioning ducts in your home clean. Set up a schedule for periodic cleaning, and stick with it.

In addition, lower the relative humidity in your home to less than 50 percent. This will discourage the growth of mold and dust mites. Take special note of the rooms in your home that tend to be most damp, such as the bathroom and laundry room.

If you live in a very humid climate, you may want to consider purchasing a dehumidifier for your home.

Use an air purifier such as a hepa filter or ionizer air filter to remove chemicals and toxins in the air. Open the windows and doors in your home during the day in order to get fresh air. It is also a good idea to open the windows or doors in your office in order to get fresh air and to dilute some of the toxic air. It is even better to have a ceiling fan on with a window open since there is even a better exchange for outside air. However, be sure and dust the top of the fan periodically.

Purchase some air-purifying plants such as spider plants, English ivy, or Boston ferns, to name a few.

### **Pesticide pollution**

One of the most important ways you can reduce your exposure to pesticides is to stop having your home sprayed. Try more natural methods of bug control, such as sprinkling cupboards and closets with boric acid.

Avoid the use of air fresheners or air deodorizers. Try more natural air fresheners, such as a pot of fragrant flowers on your dining room table. Better yet, open your windows on cool mornings and evenings to air out your home. If you have a window that catches a regular breeze, try planting fragrant flowers such as jasmine nearby. Aromatic plants can refresh your home with a lovely, natural scent while at the same time providing natural air purifiers and fresh oxygen.

Ask everyone to take their shoes off before coming inside from outdoors. This is a major way that pesticides are brought in. House dust

can accumulate large amounts of pesticides that have been tracked in from outside, and vacuuming every day just tends to send them into the air, making the situation even worse. It's much simpler to cultivate the habit of having everyone remove their shoes.

### **Secondhand smoke**

Do not allow smoking in your home. Avoid areas where secondhand smoke is present.

### **Toxins in our water**

A shower filter such as a charcoal or KDF shower filter is effective in removing chlorine and, thus, in preventing the formation of trihalomethanes or THM. These can be found on the Web.

## Appendix B

# YOUR FASTING JOURNAL

**T**HIS SPECIAL FASTING JOURNAL WILL HELP YOU GROW AND DEVELOP as a total person—body, mind, and spirit—as you learn to fast. Set aside time for reflecting, journaling, prayer, and Bible reading during your fast period. Before long, you will begin to touch the dynamic benefits of fasting for the cleansing and healing of the heart, mind, body, and spirit.

Each day's journal page includes a place for you to record your prayers, prayer requests, thoughts, and insights. Since you will want to repeat times of fasting, I recommend you use this appendix as your guide to track your fasting journey in your own personal journal or notebook.

This program calls for repeated periods of two or three fasts. Each time you fast, come back to the journal and take up where you left off. If you fast for longer periods, then work through the daily journal pages throughout the term of your fast.

## Before You Begin . . .

Before you begin this time of fasting, prayer, personal reflection, and spiritual growth, here are some considerations that will help you to prepare your heart.

During your fast, meditate on Scripture throughout the day, read the Bible, and ask the Holy Spirit, your Teacher, to give you divine revelation.

Listen to Bible teaching tapes while you're driving, at work, or at home to help you stay focused on God's Word.

Pray as often as possible, or do as Scripture says and pray without ceasing. Set aside certain specific times for prayer and journaling. Here are some pointers that will also help:

- Take time to be quiet before the Lord, and listen to the voice of the Spirit.
- Record in your journal what the Holy Spirit is revealing to you.
- Write down prayer requests.

- Write down revelation and insights given to you during the fast.
- Write down praise reports.
- Write down any dreams, and pray for the interpretation of them.

Before you start, it's important to set the boundaries of your fast. Determine what type of fast you will go on. Check the boxes below that identify fast or fasts you will be implementing.

- A partial fast, as in Daniel
- A water fast (do not go over three days unless followed by a doctor)
- A fruit and vegetable juice fast (as discussed in this book)
- A fast with a powdered protein supplement (such as UltraClear Plus or UltraGlycemX)
- A word fast (a refusal to speak any words that hurt, injure, or cause fear, doubt, anger, strife, shame, or guilt)
- A fast from media, TV, Internet, and radio in order to listen to the Bible on tape or listen to teaching tapes instead
- A fast from harsh, critical words at home (This fast will help you as a mother or father to use language that is courteous, kind, and uplifting to children. It will help you as a husband or wife to speak only encouraging, uplifting words to your spouse.)
- A fast from gossip (Are you surrounded by gossip, criticism, and negativity at work or with a social group? This fast helps you gain control over such deadly, toxic social environments. Simply refuse to gossip about anyone and refuse to listen to any gossip.)

Now that you've set your parameters, it's time to get started. I pray that these special days of cleansing and healing will be some of the most rewarding days of your entire life. I pray that you will experience renewed health, energy, and vitality. In addition, I pray that your soul and spirit will be refreshed and renewed as well.

Remember, if you plan to fast on a regular basis, instead of writing in these journal pages, you may want to use them as a guide to track your fasting journey in your own personal journal or notebook. Now, let's get started.

## Day One

# Prerequisites to Fasting

You will not fast as you do this day, to make your voice heard on high. Is it a fast that I have chosen?

—ISAIAH 58:4

### 1. What are your purposes for fasting?

- To set free a child on drugs or alcohol
- To set free a child in rebellion
- For the salvation of a child, friend, or family member
- To break a spirit of strife over a home business or church
- To break an addictive relationship
- Other \_\_\_\_\_

### 2. Are you fasting for divine guidance and revelation for yourself or a loved one?

- In deciding who to marry
- In deciding what job or what field of study to choose
- In deciding where to move
- For deciding what type of work God would have you to do
- For promotion in your job, as Joseph was promoted from Potiphar's house to second in command of all of Egypt behind Pharaoh
- For wisdom to understand the need for that promotion
- Other \_\_\_\_\_

**3. Commitment: Write a statement of commitment to God about why you are fasting and what you hope will be accomplished during this special time.**

---

---

---

---

---

---

---

---

---

---

**4. Dedication: Write a prayer of dedication, devoting this fast time to God and to His purposes in your life.**

---

---

---

---

---

---

---

---

---

---

## Day Two

# Repentance and Reconciliation

You shall cry, and He will say, “Here I am.” If you take away the yoke from your midst, the pointing of the finger, and speaking wickedness.

—ISAIAH 58:9

**Fasting is a way to help you to enter into God’s presence where you can minister to Him through praise, worship, and thanksgiving. Here are some steps to follow to help you enter into God’s presence.**

**1. First, identify and confess all sin before the fast and repent. Also, do so during the fast. Write a list of any sin you may have in your life.**

---

---

---

**2. Now, write a prayer confessing and repenting to God for those sins.**

---

---

---

**3. Ask the Holy Spirit to identify any strongholds such as anger, fear, hatred, envy, jealousy, bitterness, unforgiveness, rejection, shame, guilt, blame, abandonment, grief, or inadequacies that are separating you from God. Ask the Holy Spirit to help you forgive**

**yourself and anyone else who has wronged you and to break the stronghold.**

---

---

---

---

---

**4. The Holy Spirit may prompt you to seek reconciliation and restoration from someone who has wronged you. Ask God to show you any person or people to whom you must go and seek reconciliation. What are their names?**

---

---

---

---

---

**5. Write out a prayer from your heart asking God for help to truly forgive and bless ALL others.**

---

---

---

---

---

---

---

## Day Three

### A promise of refreshing

The LORD will guide you continually, and satisfy  
your  
soul in drought, and strengthen your bones; you  
shall  
be like a watered garden, and like a spring of  
water,  
whose waters do not fail.

—ISAIAH 58:11

**The Bible promises mental, physical, and spiritual refreshing during fasting.**

**1. Write about your need for refreshing.**

---

---

---

---

---

---

---

**2. Write a prayer asking God to refresh specific areas in your life.**

---

---

---

---

---

---

---

## Day Four

# Releasing Burdens

Is this not the fast that I have chosen: to loose the bonds  
of wickedness, to undo the heavy burdens?

—ISAIAH 58:6

**Fasting will also set you free from burdens.**

**1. This means a fast will enable you to be set free from burdens such as:**

- Financial burdens
- The stresses of everyday life
- Chronic illness of yourself or a loved one
- Legal problems, including lawsuits, bankruptcies, foreclosures, or incarceration
- The burden of taxes
- Dealing with difficult neighbors, coworkers, or family members

**2. Write here or in your journal about your circumstances.**

---

---

**3. Write out a prayer asking for God's help and giving your burdens to God. Thank Him for it.**

---

---

---

**Day Five**

**Fasting for Healing**

Your healing shall spring forth speedily.

—Isaiah 58:8

**One of these burdens is sickness. You may also fast for a longstanding or recurrent illness of yourself or a loved one.**

**1. List the loved ones and their needs for which you're fasting.**

---

---

---

---

---

---

---

**2. Write out a prayer asking God to heal your loved ones.**

---

---

---

---

---

---

---

**Day Six**

**A Release of God's Power**

And your righteousness shall go before you. The  
glory  
of the LORD shall be your rear guard.

—ISAIAH 58:8

**Fasting helps to release the power of the Holy Spirit in one's life.**

**1. Do you want to see God's power released in your life? Write about it.**

---

---

---

---

---

---

---

**2. Write a prayer asking God for more power in your life to lead more to the Lord.**

---

---

---

---

---

---

---

## Day Seven

# Protection and Safety

. . . to loose the bonds of wickedness.

—ISAIAH 58:6

**Fasting will provide you with protection, safety, and deliverance.**

**1. What circumstances do you need God's help with?**

- Protection and deliverance from domestic violence
- Safety from physical harm
- Protection of your home, your finances, and your business
- For safety and protection of your children in school, day care, or any other public place

**2. The Book of Esther shows divine protection of the children of Israel by the fast of Esther and Mordecai. Read through the Book of Esther today.**

**3. When you are fasting, you should be communing with God during the fast. This is how you will receive God's protection and His deliverance. Psalm 91:1–3 gives other promises you can claim for yourself during this period of fasting.**

**4. Write a prayer thanking God for His protection.**

---

---

---

---

---

## Day Eight

# Expecting the Benefits of Fasting

Then you shall call, and the LORD will answer;  
you shall  
cry, and He will say, “Here I am.”

—ISAIAH 58:9

**1. While you are fasting, you should also be expecting. Expect God to do wonderful things in your life while you are on your fast. Study the list of benefits of fasting from the Bible.**

- ❑ Fasting builds character and integrity. “But I discipline my body and bring it into subjection, lest, when I have preached to others, I myself should become disqualified” (1 Cor. 9:27). Fasting helps to break the carnal nature, which allows us to be led by the Spirit and, therefore, to walk in integrity.
- ❑ Fasting brings the flesh under subjection. Isaiah 58:6 says fasting will loose the bands of wickedness.
- ❑ So many people are controlled by the lusts of the flesh. Romans 13:14 warns us to make no provision for the flesh to gratify its desires. In 1 Peter 2:11, we are instructed to abstain from the passions of the flesh.
- ❑ Fasting allows us to loose the bands of wickedness, which are the strongholds of the flesh.
- ❑ Fasting enables us to seek the presence of God. Isaiah 58:9, 11 says, “Then you shall call, and the LORD will answer. You shall cry, and He will say, ‘Here I am.’ . . . The LORD will guide you continually, and satisfy your soul in drought, and strengthen your bones. You shall be like a watered garden, and like a spring of water, whose waters do not fail.”
- ❑ Fasting enables you to preach with power and authority. Read Acts 1:8 and Acts 13:3.

## Day Nine

# Being Led by the Spirit During Fasting

The Lord will guide you continually.

—ISAIAH 58:11

**To realize all of the benefits of fasting, you must be led by the Spirit during this special time. Spend some time reading about fasting and about the Spirit of God in the Bible.**

**1. Fasting should be led by the Spirit to receive spiritual benefits. Luke 4:1–2 explains how Jesus fasted. He was led by the Spirit and was full of the Spirit.**

**2. Jesus endorsed fasting in Matthew 6:1–18 and actually said, “When you fast . . .” He did not say, “If you fast . . .” However, when you fast at the Spirit’s leading, do it with specific purposes in mind.**

**What Spirit-led purposes do you have for fasting today?**

---

---

---

**3. The church fasted as the Spirit guided them or as they had need. Read Acts 13:1–3.**

**4. The Spirit led Jesus into the wilderness. The Lord also led Moses. In Exodus 24:12, the Lord told him to come up into the mountain. There Moses remained with God for forty days and forty nights without food or water. Read about these accounts. Describe how you feel God led you to start fasting.**

## Day Ten

# Your Motivation for Fasting

Indeed you fast for strife and debate.

—ISAIAH 58:4

**1. Spend some time reflecting about your own motives for fasting. Are your motives pure? Reflect on the questions below.**

The Pharisees demonstrated spiritual pride when they fasted. Are your motives to impress others?

---

---

---

Fasting is worthless if it becomes a ritual or routine. Has fasting become just a routine part of your life?

---

---

---

Fasting can cause self-righteousness, which exalts a person in his own eyes and in the eyes of others. Do you fast to gain the approval of those who see you fasting?

---

---

---

Will you get personal gain or benefit from fasting, or is it for the Lord's benefit?

---

---

---

We should fast for the benefit of others, not merely for ourselves. Will your fast benefit others?

---

---

---

**2. Write a prayer asking God to forgive you for any wrong motives for fasting and to fill your heart and mind with motives that are pure.**

## Appendix C

# TIPS FOR HEALTHY EATING

IN CHAPTER 6 WE DISCUSSED THE IMPORTANCE OF CHOOSING ORGANIC fruits and vegetables to avoid the toxic chemicals used as pesticides and fertilizers on most foods grown commercially. I realize that it may be difficult to change to a totally organic diet for the purposes of the detoxification diet, as the cost of organic vegetables and products may be a bit expensive for your budget. I recommend that you begin by selecting just a few organic foods. As you can progress toward more organically grown foods, you will be on your way to a healthy diet.

The technical definition of *organic foods* is “food products that are grown with the addition of only animal or vegetable fertilizers to the soil, such as manure, bone meal, and compost.” Organic foods are produced without the use of artificial pesticides and chemical fertilizers, and they are minimally processed. This means that they contain no hydrogenated fats, artificial additives, preservatives, or genetically modified organisms, also known as GMOs.

## Helpful Tips for Grocery Shopping

Including the following foods in your diet will help you to eliminate harmful foods and begin to nourish your body more naturally. The following categories of real foods should be a part of your family’s daily diet:

- Fresh organic fruits
- Fresh organic vegetables
- Leafy greens for salads
- Whole-grain breads such as Ezekiel bread or spouted bread, spelt, millet, or brown rice bread (minimize wheat)
- Water—consume plenty of filtered or bottled water
- Freshly squeezed juices

- Rice, almond, and coconut milk
- Nuts (such as almonds, walnuts, and Macadamia nuts) and seeds (such as pumpkin seeds, sunflower seeds, sesame seeds, or flax seeds)
- Fresh herbs whenever possible
- Herbal teas such as milk thistle tea, asparagus tea, green tea, white tea, black tea, chamomile tea, and others
- Organically farmed eggs, known as pastured eggs
- Fish such as wild salmon, sardines, and tongal tuna
- Free-range or organically raised chicken

### **Products to Avoid**

Of course, along with adding foods that can be nourishing to your body, you should avoid foods that can have harmful effects. The following is a partial list of foods that should generally be avoided when on this program:

- Coffee
- Dairy products (milk, cheese, yogurt, cream)
- Sugar
- Wheat products including wheat pasta, crackers, wheat bread, pretzels, and bagels
- White rice
- Salt
- Alcohol
- Artificial food additives
- Fried foods
- Artificial sweeteners such as aspartame
- Hydrogenated and partially hydrogenated, or trans fats
- Carbonated beverages
- Processed foods

- Corn products

You can wean yourself from unhealthy eating habits by consciously substituting harmful food products that have been old favorites of yours with similar healthy ones. Check the chart below to see which foods you need to replace in your diet, and choose healthy alternatives. Give yourself a chance—you may actually like them!

### HEALTHY SUBSTITUTIONS

Old Favorite	Healthy Substitute
Wheat bread	Millet, brown rice (gluten free), spelt, or other wheat-free breads
Wheat pasta	Pasta made from spelt, rice, millet, or other wheat-free pasta
Whole milk	Rice, almond, or sesame milk
Butter, sugar, desserts	Nut butter, hummus, tahini, and guacamole stevia or fresh fruits
Sugary cereals	Muesli with fresh fruit, millet cereal, or rice cereal

### Healthy Guidelines for Food Preparation

Do not cut or prepare fruits or vegetables before you are ready to eat them. You may be tempted to slice up that melon or carrot sticks just for the convenience of being able to grab them from the refrigerator. However, fruits and vegetables lose their nutrients when they are cut and stored. It is best to prepare them when you know they will be immediately eaten.

Do not cook food too far in advance. Though busy homemakers like to prepare meals in advance, they need to understand that reheating food and leftovers depletes the food of valuable vitamins, minerals, and nutrients.

Fruits and vegetables should be eaten unpeeled whenever possible because many vitamins and minerals are actually concentrated just beneath their skin. The outer layer of organic fruits and vegetables should be safe to eat. However, if you have not purchased organic items, it is imperative that you wash these fruits and vegetables carefully. (See Chapter 6 for information on washing fruits and vegetables.)

As we have discussed, it is best to use fresh, organically grown fruits and vegetables. However, if fresh products are not available, choose frozen fruits and vegetables, as their nutritional value is similar. Always avoid canned fruits and vegetables.

## **Helpful Appliances and Kitchen Essentials**

Appliances that are beneficial in meal preparation are listed below. Although your kitchen does not have to be equipped with these appliances in order to pursue healthful eating, they can be helpful time savers in the kitchen. These appliances allow you to prepare your meals more easily so you can get on with your life and spend more quality time with your family.

- Steamer: Lightly steaming vegetables keeps important vitamins and minerals from being lost, thus making your vegetables better tasting and better for you.
- Blender: A blender is extremely helpful when making soups and smoothies.
- Juicer: A juicer can be well worth your investment. By juicing fruits and vegetables, you are consuming all the nutrients of the items you are juicing and eliminating preservatives and artificial ingredients. My favorite is the Vitamix blender.
- Stainless steel or porcelain cookware is best. Do *not* use aluminum cookware. The residue from aluminum cookware or aluminum foil can be transferred to our bodies as toxic minerals. Therefore, it is best to avoid using aluminum cookware.

## **Tips for Choosing the Most Beneficial Cooking Process**

A healthy rule of thumb for eating healthily is to eat as close to nature as possible, choosing living foods. (See Appendix D for information on *The Seven Pillars of Health*.) Raw fruits and vegetables are best. However, after choosing a good portion of your diet from raw foods, there are healthy ways to prepare foods. I recommend that you try the following:

- *Steaming* is a wonderful way to cook vegetables. Lightly steaming your vegetables causes very little loss of nutrients.
- *Stir-frying* is a good method of cooking because the food is briefly cooked at a low temperature so that it retains most of its nutrients. Try stir-frying using a small quantity of vegetable stock or water rather than oil. If oil is essential to the meal preparation, use a small amount of extra-virgin olive oil.
- *Boiling* is not an ideal method for cooking vegetables. However, if you must boil vegetables, bring the water to a boil first, and then add your vegetables for a brief time. Do not allow them to soak in the water. Drain them immediately and serve them.
- *Grilling* is an acceptable means of food preparation. You can still enjoy the flavor of grilled meats and vegetables if you prepare them safely. When grilling your free-range meats, simply avoid charring the meat and vegetables. Charred meat contains a chemical called benzopyrene, which is a highly carcinogenic substance.

## Appendix D

# PRODUCT INFORMATION

THROUGHOUT THIS BOOK YOU MAY HAVE NOTICED THAT VARIOUS products have been mentioned. For your convenience, here's a listing of these products and how to purchase them:

### **Divine Health Products**

(For ordering call 407-331-7007 and press 2 for the Orders Department, or visit our website at [www.drcolbert.com](http://www.drcolbert.com))

- Active form of B complex - Divine Health Living Energy (B complex)
- Divine Health Fiber Formula
- Divine Health Living Green Tea with ECGC
- Divine Health Milk Thistle
- Divine Health Probiotic
- Contains 22 billion CFU (colony-forming units) of lactobacillus acidophilus, bifidobacterium, and saccharomyces
  - Grape Seed and Pine Bark Extract
- Divine Health Living OPC
  - Multivitamins
- Divine Health Multivitamin (120 count and 240 count)
- Divine Health Living Multivitamin Powder
  - Phosphatidylcholine
- Divine Health Phosphochol (capsules)
- Divine Health Phosphochol (liquid)
  - Phytonutrient Drinks
- Divine Health Green Superfood
- Divine Health Organic Living Fruit and Veggie Powder

## **Other Supplements Available at the Divine Health Wellness Center**

(For ordering call 407-331-7007 and press 2 for the Orders Department)

- Beet Extract
- Beta TCP
  - Glutathione-Boosting Supplements
- Cellgevity—Dr. Colbert’s favorite antioxidant and detox • formula
- Max GXL
- Max One
  - Probiotic Formulas
- Probiomax DF (100 billion CFU)
- PRObiotic 225 (225 billion CFU)
- Saccharomycin DF (5 billion CFU)
- Theralac (50 billion CFU)

### **Supplements from Metagenics**

(For ordering call 800-692-9400; use ordering code W7741)

- Detox Formulas
- UltraClear Plus pH
- UltraClear Renew
  - Fasting Supplement for Type 2 Diabetes
- UltraGlycemX
- Zinc Carnosine
- Zinlori
  - **Juicer**
  - Vitamix blender

(For ordering visit [www.vitamix.com](http://www.vitamix.com), use ordering code 06-006584)

## **Infrared Saunas**

- Infrared Lamp Sauna  
(For ordering call 888-330-6456 or visit [www.drlwilson.com](http://www.drlwilson.com))
- TheraSauna  
(For ordering call 888-729-7727 or visit [www.therasauna.com](http://www.therasauna.com))

## **To Find a Biological Dentist**

- International Academy of Oral Medicine & Toxicology  
(Call 863-420-6373 or visit [www.iaomt.org](http://www.iaomt.org))
- International College of Integrative Medicine  
(Call 866-464-5226 or visit [www.icimed.com](http://www.icimed.com))

## **Food Sensitivity Testing**

- ALCAT  
(Visit [www.alcat.com](http://www.alcat.com))
- Sage Medical Lab  
(Visit [www.sagemedlab.com](http://www.sagemedlab.com))

## **To Find a Nutritional Doctor**

- American Academy for Anti-Aging Medicine  
(Call 888-997-0112 or visit [www.worldhealth.net](http://www.worldhealth.net))

## **GI Tract Testing**

- Genova Diagnostics
  - Comprehensive Digestive Stool Analysis with Parasitology
  - Intestinal Permeability Testing  
(Visit [www.gdx.net](http://www.gdx.net))

## ***The Seven Pillars of Health* Audio Series**

(Call 407-331-7007 or visit [www.drcolbert.com](http://www.drcolbert.com))

**D**ON COLBERT, MD, WAS BORN IN TUPELO, MISSISSIPPI. HE ATTENDED Oral Roberts School of Medicine in Tulsa, Oklahoma, where he received a bachelor of science degree in biology in addition to his degree in medicine. Dr. Colbert completed his internship and residency with Florida Hospital in Orlando, Florida. He is board certified in family practice and anti-aging medicine and has received extensive training in nutritional medicine.

To have Dr. Don and Mary Colbert hold a health seminar at your church or town, for other speaking engagements, or if you would like more information about Divine Health Nutritional Products, you may contact:

**DON COLBERT, MD**  
1908 Boothe Circle  
Longwood, FL 32750  
Telephone: 407-331-7007  
Website: [www.drcolbert.com](http://www.drcolbert.com).

**DISCLAIMER:** Dr. Colbert and the staff of Divine Health Wellness Center are prohibited from addressing a patient's medical condition by phone, facsimile, or e-mail. Please refer questions related to your medical condition to your own primary care physician.

YOU WANT TO BE HEALTHY. GOD WANTS YOU TO BE HEALTHY.  
 In each book of the Bible Cure series, you will find helpful alternative medical information together with uplifting and faith-building biblical truths. 0
